

Ramesh Babu, Tejwani, K.G., Agrawal, M.C. and Bhushan, L.S. 1981. Rainfall Intensity-Duration-Return Period Equation and Nomographs of India. Bulletin No. 3, CSW/CRTL, Dehradun. 70 p.

The bulletin deals with developing rainfall intensity-duration-return period equations and nomographs for 42 stations located in five rainfall zones in India. The zonal equations and nomographs for these zones have also been developed. Such equations and nomographs are required for design of soil conservation and runoff disposal structures and for planning flood control projects. The authors suggest that considering the simplicity in use, quickness and precision in results, the nomographs are the most handy tool for field workers.
