

Mittal, S.P., Chandrasekhar, K. and Nambiar, K.T.N. 1975. Effect of weedicides and manual weeding on yield of rainfed cotton. *Curr. Res.*, 4: 186-187.

The paper discusses the results of an experiment in which pre-emergence spray of 3 weedicides and post emergence spray of weedicides all at two doses were compared with no weeding and hand weeding in cotton (PRH 30/2). Pre-emergence application of cotoran at both levels of 1.5 and 3.0 kg/ha a.i. was as effective as hand weeding in controlling the weed growth and increasing the height and yield of cotton under rainfed conditions.
