

soil erosion and increasing crop yields.

402. **Ram Babu and Agarwal, M.C. 1986.** Non-monetary cropping practices for higher production and soil conservation. *Indian Fmg.*, 36(6): 36-37.

The paper is an attempt to evaluate the efficacy of non-monetary inputs like contour cultivation, strip, mixed farming, intercropping, appropriate sowing time, crop geometry, etc. in the context of conserving soil and moisture as well as increasing crop yields. It is concluded that such practices are highly effective and remunerative.
