

CA Singh, Gurmel, Bhushan, L.S. and Ram Babu. 1976. Performance of wheat (*Triticum aestivum*) and economics of N fertilization under rainfed conditions. *Soil Conserv. Digest*, 4(2): 53-57.

4-year experiment conducted at Dehradun to work out economic dose of nitrogen fertilization and the best method of its application to rainfed wheat revealed 59 kg N/ha as the optimum dose. The difference due to the methods of application were not significant. Net returns from rainfed wheat over fertilizer cost for various prices of nitrogen and wheat have also been elaborated in the paper.
