

Singh, Gurmel, Joshi, B.P. and Singh, P.N. 1980. *Do ya teen sichayion se hi gehun ki bharpur upaj. Kheti*, 32(10): 21-22.

The article shows how increased yields of wheat with a dwarf variety, RR-21 can be obtained with the limited use of irrigation water. Three years research results pertaining to Doon Valley conditions have been presented in support of the recommendation. It is indicated that only two irrigations each of 5 cm depth, given at tillering and jointing stages of growth, are sufficient for higher production of wheat.
