

improved renovated terraces by 60 and 41 per cent.

493. Singh, Gurmeh, Tyagi, P.C., Mohan, S.C. and Singh, P.N. 1992. When soil, water and vegetation make the team. *Intensive Agric.*, XXX(9&10): 23-28.

The article deals with watershed management, its concept and objectives, planning and delineation in national context. Experiences and achievements obtained in some of the model watersheds in the country together with constraints and gaps have been discussed. The authors emphasise that integrated management of soil, water, plant, man and animal on watershed basis, is necessary to optimise the production on sustained basis for all round development of the area and conservation of the environment.
