

526. **Srivastva, A.K., Verma, B., Pratap Narain, Singhal, A.K. and Sewa Ram.** 1983. Systems of cropping for better rainfed production in south-eastern Rajasthan. National Symp. on "Watershed management for increased productivity in red and black soils", CSWCRTI, Research Centre, Bellary, Feb. 06-09, 1983.

Major crops were studied under intercropping and double cropping systems from 1976 to 1982 at Kota (Rajasthan). It was indicated that cultivation of pigeonpea + blackgram, pigeonpea + sorghum and pigeonpea + greengram intercropping in 1:1 in general, castor + sesame (1:2) under severe drought and greengram-safflower and greengram-*taramira* double cropping under normal rains and favourable moisture, production can be increased and stabilised under rainfed agriculture.
