

533. **Srivastva, A.K. and Rama Mohan Rao, M.S. 1989.** Agroforestry for sustained agricultural production. *Indian Fmg.*, 39(7):33-35.

The paper highlights the role of agroforestry for sustained agricultural production particularly in semi-arid black soil regions in the country. Various systems of agroforestry pertaining to agri-silviculture, alley cropping silvi-pasture and alternative land use have been elaborated and suitable species of tree/shrubs/grasses for each of them and also on various soil conservation structures have been provided. Estimated yields of food, fuel and fodder due to the adoption of such agroforestry systems have also been shown through diagrams.
