

635. **Chinnamani, S. 1977.** A note on trees that can be grown in the high altitudes in South India. *Soil Conserv. Digest*, 5(2):62-66.

The paper highlights the role of forests in high hills which they play in soil and water conservation and industry by providing wood, fuel, timber, paper pulp, rayon pulp, soft wood, tan bark etc. Two important tree species i.e. bluegum and wattle for farm woodlots have been discussed.
