

637. **Chinnamani, S. 1987.** Wild langurs in Chambal and Mahi ravines, A source of recreation and erosion control. Abstract No. 34, National Symp. on "Land and Water Management in Ravines", CSWCRTI, Research Centre, Agra, March 19-22, 1987: 31.

Among wild primates, Prosbtis (*Semnopithecus Sentellus*) Langurs are very important in Chambal and Mahi ravines. They act as herbivorous chain in the natural environment and

disperse seeds of natural forest trees, shrubs, climbers and herbs and help to a large extent
