**Prajapati, M.C.** 1982. Soil erosion, a cancerous process of environment pollutions and cause of international conflicts in the Indian sub-continent and trees the saviour. Proc. Symp. on "Resources survey for landuse planning and environmental conservation", I.P.I., Dehradun, Oct. 20-22, 1982:185-189.

Role of plants and trees in soil conservation and environmental protection has been discussed in detail. It has been described how soil and water erosion contribute to pollution and environmental degradation. Importance of forests and grasslands in mitigating the ill effects of atmospheric pollution is also highlighted.
