

- The third structure was functioning satisfactorily.
- 733. Prakash, C., Rao, D.H. and Kurothe, R.S. 1990.** Encroachment of ravines in table lands along Chambal river in the semi-arid region of Kota (Rajasthan). Post Symp. Proc. Internl. Symp. on "Water Erosion, Sedimentation and Resource Conservation", Dehradun, Oct. 09-13, 1990: 47-50.

Nearly 30% of ravines in Rajasthan are in Kota district on the banks of rivers Chambal, Kali Sindh, Parvathi, Parwan and Alnia. A resurvey was conducted in 8 villages of Kota district after a span of 20 years to determine the variation in the composition of table lands, shallow (G1), medium (G2) and deep ravines (G3). The total ravine area in 8 villages had increased by 379 ha (i.e. from 2016 to 2395 ha) in 20 years.
