

- 980.** Wasiullah, Gupta, S.K., Ram Babu and Nayal, M.S. 1969. Raingauge density for small watershed. *Indian For.*, 95(2):99-101.

Various raingauges installed at a density of 1.94 to 39.80 hectares per raingauge, at Selakui (Dehradun) showed that the variation in each storm recorded in 5 years (comprising 137 storms of more than 10.0 mm) was within 5 percent level of significance, hence one raingauge upto watershed area of 370 hectares was found sufficient.
