- There is possibility of light rainfall on 1st May so farmers are advised to complete threshing of crops should be done and keep farm produce under safe place. There is possibility of light rainfall on 1st may so farmers are advised to complete the winnowing of wheat produce for storage. Before storage, grains should be properly cleaned and it should be dried to the recommended level of moisture content not more than 12%. Go-downs should be properly cleaned by removing all the grains and other storage matter of previous crop. Cracks and crevices of

the walls should be cleaned and repaired and whitewashing should be done. Those who can afford are advised to spray 0.5 % Malathion solution and keep the chamber closed for 7-8 days. Old gunny bags should be deep in solution having one litre Malathion in 100 litre water and dried in shade before using. Field preparation should be done for sowing of cotton in this week.

- Farmers are advised to procure good quality certified seeds from reliable sources. When the size of okra fruit is 5 inches long the picking should be done. After picking, top dress urea @ 30 kg/ha in okra. Due to the rainfall in previous days there is sufficient moisture available in the field, so it is the right time to dig out the mature onion.
- Looking to the increase in temperature in coming days make suitable arrangement for animal to protect from high temperature, and make provision for drinking water.
