## FOREWORD

Soil degradation with respect to nutrient depletion and anthropogenic interventions has affected different kinds of nutritional disorders are observed in plants. Tropical tuber crops like cassava, sweet potato, no exception to it as they are heavy feeders on soil. The low biological efficiency and high yield potential of these crops necessitates identifying the nutrient related common deficiencies and their management in major tropical tuber crops like elephant foot yam, lesser yam and tannia. This guide will serve the purpose for the stake holders.

I appreciate the sincere efforts of the author for this and useful publication. This technical guide is a valuable material to diagnose, delineate and correct nutritional disorders in tropical tuber crops.
