## Preface

The trade of fish and fishery products in India plays an important role in the Indian economy. The trade includes export, import, re-export and re-import of fish and fishery products under different HS codes. India is considered as net fish exporting country, but due to the high demand in the domestic market as well as by restaurants, India imports significant quantity of fish and fishery products from different parts of the world. Time series data on import profile of fish and fishery products help to formulate appropriate policy and its implementation, which make the fish import trade to India sustainable. The integration of real-time data into a database would definitely help the policy makers, researchers, stakeholders, industrialists, fishermen, students, etc. Even though the data on import of fish and fishery products is available, it is scattered and not available in a systematic manner, which makes extraction, retrieval, compilation and usage difficult. This is posing problems in analyzing the data for developing appropriate strategies and also for any meaningful policy interventions.

With this background, ICAR-Central Institute of Fisheries Technology took a concerted effort to compile the pieces of information on fish imports to India under different HS codes and its sub codes on year wise, item wise and country wise data to an organized database in the form of a book "***The Handbook on Fish Import Statistics to India***".

I wish to compliment Dr. C.G. Joshy and co-authors for their efforts in compiling this very important and useful book. I am sure that this is going to be very useful for academia, Industry and policy makers.
