BT COTTON HYBRIDS EVALUATION REPORT

(CENTRAL ZONE)

The Indian Council of Agriculture has assigned the task of evaluating the Private sector Bt cotton hybrids belonging to the approved events to the All India Coordinated Cotton Improvement Project (AICCIP) in the Central Zone vide ICAR letter No. 2-3/2010-CCI Dt. 17.05.2010. The details of the trial conducted are as follows:

Test Entries

There were two sets of trials, one under irrigated conditions and the other under rainfed situation. In both the trials, both BG I and BG II check hybrids were included apart from test entries. The hybrids evaluated were given below.

I. Irrigated trial entries:

Institution	Name of the Hybrid
Ankur Seeds Pvt. Ltd.	Ankur 5642 BG II
Mahyco	MRC 7388 BG II, MRC 7391 BG II
Monsanto	DPC 9066 BG II, Sudarshan BG II
Namdhari Seeds Pvt. Ltd.	Namcot 605 BG II, Namcot 627 BG II
Nuziveedu Seeds Pvt. Ltd.	NCS 9012 Bt 2, NCS 567 Bt 2
Prabhat Agri Biotech Ltd.	PCH 9605 Bt 2, PCH 789 Bt 2
Pravardhan	PRCH 731 Bt 2
Rasi	RCH 668 BG II
Tulasi Seeds Pvt. Ltd.	Tulasi 252 BG II, Tulasi 135 BG II
Vibha	VBCH 1539 BG II
Vikram seeds	VICH 304 BG II, VICH 313 BG II
Xylem Seeds Pvt. Ltd.	NSPL 252 BG II
Check I	RCH 2 BG I
Check II	RCH 2 BG II

II. Rainfed trial entries

Institution	Name of the Hybrid
Ankur Seeds Pvt. Ltd.	Ankur 5642 BG II
Monsanto	DPC 7065 BG II, DPC 5061 BG II
Namdhari Seeds Pvt. Ltd.	Namcot 614 BG II, Namcot 615 BG II
Nuziveedu Seeds Pvt. Ltd.	NCS 9012 BG II, NCS 567 BG II
Prabhat Agri Biotech Ltd.	PCH 9605 BG II, PCH 789 BG II
Pravardhan	PRCH 731 BG II
Rasi	RCH 665 BG II
Tulasi Seeds Pvt. Ltd.	Tulasi 171 BG II, Tulasi 144 BG II
Vibha	VBCH 1503 BG II
Vikram seeds	VICH 311 BG II, VICH 314 BG II
Xylem Seeds Pvt. Ltd.	NSPL 252 BG II
Check I	Bunny BG I
Check II	Bunny BG II

The trial locations

The irrigated and rainfed trials were conducted in the following locations.

Irrigated trials

1. Cotton Research Station, Khandwa under Rajamatha Vijayaraje Scindia Krishi Vishwa Vidyalaya, Madhya Pradesh.
2. Cotton Research Station, Surat under Navsari Agricultural University, Gujarat.
3. Regional Cotton Research Station, Junagadh under Junagadh Agricultural University, Gujarat.
4. Agricultural Research Station, Talod under Sardarkrishinagar Dantiwada Agricultural University, Gujrat.
5. Agricultural Research Station, Banswara under Maharana Pratap University of Agriculture and Technology, Rajasthan

Rainfed trials

1. College of Agriculture, Indore under Rajamatha Vijayaraje Scindia Krishi Vishwa Vidyalaya, Madhya Pradesh.
2. Regional Cotton Res. Station, Bharuch under Navsari Agricultural University, Gujrat.
3. Dr. Panjabrao Deshmukh Krishi Vidyapeeth, Akola, Maharashtra

4. Cotton Research Station, Nanded under Marathwada Agricultural University, Maharashtra and
5. Central Institute for Cotton Research, Nagpur, Maharashtra.

The trial details:

Irrigated Trial

Number of Entries	19 + 2 checks
Number of rows	Six
Row length	6 M
Spacing	90 x 60 Cm
Number of replications	Three
Design	Randomised Block Design
Fertilizers	As per local recommendation

Rainfed Trial

Number of Entries	17 + 2 checks
Number of rows	Three
Row length	6 M
Spacing	90 x 60 Cm
Number of replications	Three
Design	Randomised Block Design
Fertilizers	As per local recommendation

Method of evaluation

Weekly observations were recorded from 45 DAS against major sucking pests and bollworms. The insecticidal sprayings were given based on the economic threshold levels of the sap sucking pests and bollworms. The sprayings were undertaken in all the replication of an entry, even if the threshold level of infestation had exceeded only in one of the replications.

Observations recorded

The biometrical observations like germination percentage, final plant stand, mean boll weight, ginning percentage, lint and seed index and seed cotton yield were recorded in the ETL based plant protection trial. Important fibre quality attributes like 2.5% span length, micronaire and fibre strength were also determined through the High Volume Instrument. The entomological observations on sap sucking pests, bollworms, green boll damage, open boll damage and locule damage were also recorded in ETL based trial. Under unprotected conditions, boll and locule damage and seed cotton yield were assessed.

The trials have been reported in two parts. In the first part, irrigated trials have been reported. In the second part, rainfed trial results have been reported.

IRRIGATED TRIALS

In this trial, 19 test hybrids were evaluated with two Bt check hybrids viz., RCH 2 BG I and RCH 2 BGII. The sowings were completed during the first fortnight of July 2010.

A. BIOMETRICAL EVALUATION

Biometrical observations recorded in the ETL based plant protection trial are reported below.

Germination and final plant stand

The germination of all the entries at all the locations was very good with corresponding plant stand maintained at harvest.

Boll weight, Ginning Outturn, Lint Index and Seed Index:

The data recorded on boll weight (g/boll), ginning outturn (%), lint index (g) and seed index (g) in various locations are furnished in Tables 1-3.

Table 1. Boll weight (g)

B). MEAN SEED COTTON YIELD (KG/HA) UNDER PROTECTED CONDITIONS

Of the five locations evaluated under irrigated situation, the yield levels very high in Talod, moderate in Junagadh, Surat and Banswara and poor in Khandwa (Table 4). Among the check hybrids, the performance of RCH 2 BG I (1279 kg/ha) was better than RCH 2 BG II (1139 kg/ha). The highest mean seed cotton yield was recorded in the test hybrid VBCH 1539 BG II (2243 kg/ha) with 75.4 % yield increase over RCH BG I and 96.9 % yield increase over RCH 2 BG II. Except Tulsai 135 BG II (1119 kg/ha) all other hybrids showed yield superiority over both the check hybrids.

CV %	8	12		10				

*Since the yield was very low in most of the hybrids, it was not considered for calculating mean yield

C). FIBRE QUALITY EVALUATION

The fibre quality evaluations were done two locations viz., Surat and Khandwa. The fibre length ranged from 26.7 mm to 32.2 mm and the micronaire varied from 3.3 to 4.5 (Table 6). Whereas, the bundle strength ranged between 20.6 and 25.5 g/tex. In total, four test hybrids recorded a bundle strength of 25.0 g/tex or more.

D). ENTOMOLOGICAL EVALUATION

The entomological evaluations were primarily targeted for testing the entries against the bollworms and sap sucking insects.

Sucking pests

The data recorded in respect of jassids, aphids, whiteflies and thrips are furnished in Tables 7 to 10.

Natural enemies

In general, there was no discernable difference between the check hybrids and the other Bt entries in harbouring the natural enemies (Table 10)

Table 6. 2.5 % Span Length (mm), Micronaire and Bundle Strength

Green boll and Locule damage by Pink bollworm

There was no incidence of pink bollworm at Banswara centre. At Surat, both green boll as well as locule damage was considerable. Per cent green boll damage varied from 0 to 7.8 and locule damage ranged from 0 to 3.6 % at Surat (Table 13)

Open boll and locule damage

Higher damage of open boll as well as locule was reported at Khandwa (Table 14). No damage on the basis of locule was reported at Banswara. At Junagadh, open boll damage was reported only in two hybrids viz., Namcot 605 BG II and RCH 2 BG I, whereas, other hybrids were free from any damage.

Plant protection measures

Jassids, aphids and thrips were the most predominant sucking pests noticed. All entries tested including the check hybrids were found to be susceptible to these pests at varying degrees and at different stages of crop growth at all locations, warranting chemical intervention. Depending upon the ETL level, 1 – 3 sprays were given for controlling sucking pests.

RAINFED TRIALS

In the rainfed trial, 17 test hybrids belonging to different Private R & D firms were evaluated along with two check hybrids viz., Bunny BG I and Bunny BG II. Sowing of the trial at proper time and all the agronomic practices were followed as per standard protocol.

A. BIOMETRICAL EVALUATION

In the ETL based plant protection trial, biometrical observations recorded were recorded and are presented below.

Germination and final plant stand

Very good germination was recorded in most of the entries and subsequently sufficient plant population was maintained till the harvest at all the locations where the trial have been conducted.

Boll weight, Ginning Outturn, Lint Index and Seed Index:

The biometrical data pertaining to boll weight, ginning outturn, lint index and seed index recorded in the trial are given in Tables 15-17.

B). MEAN SEED COTTON YIELD (KG/HA) UNDER PROTECTED CONDITIONS

The yield levels recorded in the hybrids were comparatively higher in Bharuch and Indore. Only two test hybrids recorded higher mean seed cotton yield as compared to the best check hybrid of Bunny BG II (Table 18). The highest mean seed cotton yield of 1476 kg/ha was recorded in NSPL 252 BG II with 46.8 % yield increase over Bunny BG I and 19.0% yield increase over Bunny BG II. The second best hybrid was PRCH 731 BG II with 1244 kg/ha with 23.7 and 0.3 % increase over Bunny BG I and Bunny BG II, respectively. Numerically, eight other hybrids recorded higher seed cotton yield over Bunny BG I.

C). FIBRE QUALITY EVALUATION

Data on fibre quality evaluations tested in three locations viz., Bharuch, Akola and Nagpur are furnished in Table 20. The fibre length ranged from 26.3 mm to 32.3 mm and the micronaire varied from 3.3 to 4.1 (Table 20). Whereas, the bundle strength ranged between 20.6 and 26.3 g/tex.

D). ENTOMOLOGICAL EVALUATION

The entomological evaluations were made for testing the entries against the bollworms and sap sucking insects.

Sucking pests

The data recorded in respect of jassids, aphids, whiteflies and thrips are given in Tables 21 to 24.

Natural enemies

There was no discrete difference between the check hybrids and other Bt entries in harbouring the natural enemies (Table 24).

Bollworms

Larval population

There was no larval populations of *Earias* spp. and *Helicoverpa armigera* recorded in both test entries as well as check hybrids (Table 25) and population of *Pectinophora gossypiella* (Table 26) was very low and below ETL.

Green boll and Locule damage by Pink bollworm

There was no incidence of pink bollworm at Nagpur centre and correspondingly no green boll damage was noticed. At Akola, both green boll as well as locule damage was recorded and were found negligible (Table 27)

Open boll and locule damage

Considerable damage of open boll as well as locule was reported at Bharuch (Table 28). No damage on the basis of both boll and locule was reported at Nagpur.
