NATIONAL INDEX

OF

AGRICULTURAL

FIELD

EXPERIMENTS

VOL. 7 PART 2

MADRAS

1954-59

PUBLISHED BY

**INDIAN COUNCIL OF AGRICULTURAL RESEARCH
NEW DELHI**

FOREWORD

Increase in agricultural production is one of the main objectives of our agricultural planning. It is only by the exploitation of scientific methods of agriculture that we can hope to increase our agricultural production to the level needed for maintaining a reasonable standard of living to the country's population. The technical worth of improvement measures is best judged from carefully conducted field experiments. While it is true that a large number of agricultural field experiments are conducted in the country, the results of these experiments have not been brought together in an integrated manner for the use of research workers. The absence of such a unified account has often led to duplication of work and delay in the utilisation of results for practical farming. The Institute of Agricultural Research Statistics has rendered a very valuable service by preparing a compendium of agricultural field experiments conducted in the country. The first series of compendium containing the results of all agricultural field experiments during the period 1948-53 have already been published by the Institute.

The present compendium is the second in the series covering the period 1954-59. As in the earlier compendium, the present series also contains critical summaries of results of experiments bearing on important agronomic factors, such as the response of crops to fertilizers and manures, inter-relationship of fertilizers, varieties and cultivation practices and other information of value for giving sound advice to farmers in different regions. Judging from the demand for the first series of the compendium, I am sure that the present series will also prove equally useful.

A Standing Committee consisting of the Agricultural Commissioner with the Government of India, the Director, Indian Agricultural Research Institute, and the Statistical Adviser, Indian Council of Agricultural Research, has been set up to provide general guidance to the work under this scheme. I congratulate the members of this Committee and, in particular, the Statistical Adviser and his associates at the Institute of Agricultural Research Statistics for bringing out this compendium. The preparation of this compendium has been made possible only by the wholehearted co-operation of the States and other organisations in making available the results of their experimental researches for this purpose. My thanks are due to the officers of the State Departments of Agriculture and other institutions for participating in this work. I hope that the present series will be followed by periodical publications of similar compendia for later years, in order that the availability, in a consolidated form, of results of scientific experiments in agriculture in India may be maintained up-to-date.

A. D. PANDIT

Vice-President,

Indian Council of Agricultural Research.

NEW DELHI,

March 26, 1965.

PREFACE

The present set of volumes form Part II in the series of compendia of Agricultural Field Experiments being published by the Indian Council of Agricultural Research under the project for National Index of Field Experiments and contains a unified record of experiments conducted at agricultural research stations and institutes all over the country. Volumes in Part I in this series were published in 1962 and contained results of some 7,500 experiments conducted during the period 1948-53. The present set of volumes includes results of experiments conducted during the next period that is 1954-59. After the period, covered by Part I of the series, agricultural research and experimentation has expanded so much that for the period 1954-59, to which the present volumes refer, results of more than 15,000 experiments are available.

The present compendium is prepared on the same pattern as the previous one and is divided into 15 volumes one each for (1) Andhra Pradesh, (2) Assam, Manipur and Tripura, (3) Bihar, (4) Gujarat, (5) Kerala, (6) Madhya Pradesh, (7) Madras, (8) Maharashtra, (9) Mysore, (10) Orissa, (11) Punjab, Jammu and Kashmir and Himachal Pradesh, (12) Rajasthan, (13) Uttar Pradesh (14) West Bengal and (15) All Central Institutes. In each volume, background information of the respective state regarding its division into different soils and agro-climatic regions, rainfall and cropping pattern followed in each region and agricultural production and area under different crops in the state is given. The experiments reported in each volume have been arranged crop-wise for each state. All the experiments belonging to a particular crop at various research stations are grouped together. For a particular crop, experiments are arranged according to the following classification :

Manuriel (M), Cultural (C), Irrigational (I), Diseases, pests and chemicals other than fertilizers (D), Rotational (R), Mixed cropping (X) and combinations of these wherever they occur (e.g. CM as Cultural-cum-Manuriel). Experiments in which crop varieties also form a factor are denoted by adding V to their symbol and are grouped together (e.g. MV as Manuriel-cum-Varietal).

This publication owes its origin to the guidance and help of Dr. D.J. Finney, F.R.S., Professor of Statistics, Aberdeen University, Scotland, in formulating the project during his stay at the Institute of Agricultural Research Statistics as an F.A.O. expert in 1952-53.

At the Institute of Agricultural Research Statistics the work under the scheme was carried out under the supervision of Shri. T.P. Abraham, Assistant Statistical Adviser. The actual working of the scheme was conducted by Shri G.A. Kulkarni, Statistician till he left the Institute in July, 1964. The work was subsequently taken over by Shri O.P. Kathuria, Assistant Statistician. Messrs. L.B.S. Somayazulu, P.P. Rao, M.L. Sahni, Harbhajan Singh, A.L. Punhani, M.K. Joshi, N.K. Worrier, H.C. Jain and J.K. Kapoor of the statistical staff of the Institute deserve special mention for careful and painstaking work in editing and scrutiny of the manuscript as well as proofs of the compendium.

The burden of collecting the data from the various research stations and the analysis of a large number of experiments once again fell on the regional staff of the Council placed in different States. They deserve to be congratulated for the hard work they have put in.

Thanks are due to the State Departments of Agriculture, the Central Institutes and the Commodity Committees who made the data of the experiments conducted under their jurisdiction readily available to the staff of the Institute. The present publication has become possible only through their unstinted co-operation. The Institute is also thankful to the various

officers in the States who worked as Regional Supervisors for the project from time to time and took keen interest in the working of the Scheme. The list of the names of the regional supervisors and the regional staff of the project is given on the following page.

V.G. PANSE

NEW DELHI,
March 25, 1965.

Statistical Adviser,

Institute of Agricultural Research Statistics (I.C.A.R.).

**REGIONAL SUPERVISORS AND REGIONAL STAFF FOR THE NATIONAL
INDEX OF FIELD EXPERIMENTS**

<i>Region and Headquarter</i>	<i>Statistical staff from the Institute of Agricultural Research Statistics.</i>	<i>Regional Supervisors</i>
1. ANDHRA PRADESH (HYDERABAD)	S.K. JILANI P.R. YERI	Dr. MOHD. QUADIRUDDIN KHAN, Joint Director of Agricultural. LATE DR. SYED WAHEEDUDDIN.
		SHRI MD. KHASIM ADONI, Joint Director of Extension.
		SHRI N.V. MOHANA RAO, Joint Director, Agricultural Research Institute, Rajendranagar.
		SHRI L. VENKATARATNAM, Deputy Director of Agriculture (Research).
2. MAHARASHTRA (POONA)	P.D. MEHTA B. RAMAKRISHNAN	SHRI D.S. RANGARAO, Statistician, Department of Agriculture.
3. GUJARAT (AHMEDABAD)	S.P. DOSHI	DR. D. K. DESAI, Deputy Director of Agriculture (Statistics). SHRI J.B. TRIVEDI, Deputy Director of Agriculture (Statistics).
4. UTTAR PRADESH (LUCKNOW)	S.N. BAJPAI M.P. SAXENA G.N. BAHUGUNA A.C. SRIVASTAVA	DR. K. KISHEN, Joint Director of Agriculture (Statistics).
5. MADHYA PRADESH	T. LOKEswARA RAO H.C. GUPTA	SHRI A.G. KHARE, Statistician, Department of Agriculture.
6. PUNJAB, JAMMU & KASHMIR & HIMACHAL PRADESH (CHANDIGARH)	A.C. KAISTHA B.L. KAISTHA M.S. BATRA	SHRI PIARA SINGH SAHOTA, Director of Crop Insurance. SHRI MOHINDER SINGH PANNU, Statistician, Department of Agriculture.
7. BIHAR (SABOUR)	M.K. JOSHI P.C. Kholia	SHRI G.P. SINGH, Statistician, Department of Agriculture. SHRI R.S. ROY, Principal, Agricultural Research Institute, Sabour.
8. RAJASTHAN (JAIPUR)	B.P. DYUNDI N.K. OHRI	SHRI H.C. KOTHARI, Statistician, Department of Agriculture,
9. ORISSA (BHUBANESWAR)	L.B.S. SOMAYAZULU	SHRI B. MISRA, Deputy Director of Agriculture (Hq.). SHRI D. MISRA, Principal, Uttakal Krushi Mahavidyalaya, Bhubaneswar.
10. WEST BENGAL (CALUTTA)	S.N. NATH	SHRI S.N. MUKERJEE, Statistical Officer, Directorate of Agriculture.

11. MADRAS (COIMBATORE)	P. PRABHAKARA RAO V. VENKATESWARA RAO	LATE SHRI M. BHAVANI SANKAR RAO, Vice-Principal and Secretary, Research Council, Agricultural College and Research Institute, Coimbatore. SHRI T. NATARAJAN, Agronomist. SHRI A.H. SARMA, Extension Specialist. SHRI V. RAMAN, Secretary, Research Council. SHRI K.R. NAGARAJA RAO, Secretary, Research Council.
12. ASSAM	T.K. GUPTA	DR. S.R. BAROOHA, Director of Agriculture, Assam. SHRI B.N. DUARA, Joint Director of Agriculture, Assam.
13. MYSORE (BANGALORE)	K.A. BALAKRISHNAN	SHRI M.A. WALI, Director of Statistics, SHRI B.V.S. RAO, Assistant Director of Statistics.
14. KERALA (TRIVANDRUM)	V.N. IYER	SHRI M. JANARDANAN NAIR, Director of Agriculture. SHRI N. SHANKARA MENON Director of Agriculture. SHRI P.D. NAIR, Director of Agriculture.

ABBREVIATIONS COMMON TO EXPERIMENTS ON ANNUAL AND PERENNIAL CROPS AND EXPERIMENTS ON CULTIVATORS' FIELDS.

Crops :- In the top left corner is given the name of the crop on which the experiment is conducted. Within brackets along side the crop is mentioned the season wherever the information is available.

Ref :- Against the sub-title 'reference' is mentioned the name of the State, the year in which the experiment is conducted and the serial number of the experiment for that year given in brackets.

Abbreviations adopted for States are as follows :—

- | | |
|---------------------------|------------------------|
| 1. A.P.—Andhra Pradesh | 9. M.—Madras |
| 2. As.—Assam | 10. Mh.—Maharashtra |
| 3. Bh.—Bihar | 11. Ms.—Mysore |
| 4. Gj.—Gujarat | 12. Or.—Orissa |
| 5. H.P.—Himachal Pradesh | 13. Pb.—Punjab |
| 6. J.K.—Jammu and Kashmir | 14. Rj.—Rajasthan |
| 7. K.—Kerala | 15. U.P.—Uttar Pradesh |
| 8. M.P.—Madhya Pradesh | 16. W.B.—West Bengal |

For the experiments conducted under the schemes sponsored by the Indian Concil of Agricultural Research like the Model Agronomic Experiments or the Simple Fertilizer Trials scheme no serial numbers have been given at the source as the data of these experiments were collected at the Headquarters (New Delhi). In such cases the abbreviations MAE, SFT or TCM are given in the brackets against the year in which the experiment is conducted.

Site :- Name of the Research Station is mentioned alongwith the place where it is located, e.g. Agri. Res. Stn. for Agricultural Research Station.

For Central Institutes, the corresponding standard abbreviations have been adopted e.g. I.A.R.I. for the Indian Agricultural Research Institute.

In case of the experiments conducted on cultivators' fields whether under an Indian Council of Agricultural Research scheme or by the State Government, the abbreviation (c.f.) is given along with the site or centre as, for example, Cuttack (c.f.).

Type :- Abbreviations used against this item are one or more than one of the following :—

C—Cultural ; D—Control of Diseases and Pests ; I—Irrigational ; M—Manurial ; R—Rotational ; V—Varietal and X—Mixed cropping. e.g. CM is to be read as Cultural-cum-manurial.

Object :- A statement of the objective of the experiment is given indicating the main crop and type of the experiment. In case of M.A.E., S.F.T. and T.C.M. experiments, the type to which the experiment corresponds is also given, e.g. Type V, Type A or B or C etc.

Results :- Information under this heading should be read against the following items :—

(i) General mean. (ii) S.E. per plot. (iii) Results of test of significance. (iv) Summary table(s) with S.E. of comparison(s).

Other abbreviations used in the text of experiments :

- Nitro. Phos.—Nitrogen Phosphate
Ammo. Phos.—Ammonium Phosphate
A/S—Ammonium Sulphate
A/S/N.—Ammonium Sulphate Nitrate
C/A/N—Calcium Ammonium Nitrate

- A/N—Ammonium Nitrate
A/C—Ammonium Chloride
C/N—Chilean Nitrate
N—Nitrogen
P—Phosphate

K—Potash	F.M.—Fish Manure
B.M.—Bone meal	G.N.C.—Groundnut cake
Mur. Pot.—Muriate of Potash	M.C.—Municipal Compost
Pot. Sul.—Potassium Sulphate	T.C.—Town Compost
Super—Super Phosphate	Ib.—Pounds
Zn. Sul.—Zinc Sulphate	Srs.—Seers
C/S—Copper Sulphate	B.D.—Basal dressing
G.M.—Green Manure	C.L.—Cart load
F.Y.M.—Farm Yard Manure	ac.—Acre
F.W.C.—Farm Waste Compost	Dical. Phos.—Dicalcium Phosphate

Under the item (ii) (b) of the sub-heading 'Basal conditions' in the text of the experiment, the respective farm/station at which the experiment was conducted has been referred to for the soil analysis. The soil analysis of the farm, with other details of the research station is given under the background information of each state. The information regarding the details of experimental stations may be obtained under the respective items as given below :

DETAILS OF EXPERIMENTAL STATIONS

A. General information :

- (i) District and the nearest railway station with Latitude, Longitude and Altitude if available. General topography of the experimental area.
- (ii) Type of tract it represents.
- (iii) Year of establishment.
- (iv) Cropping pattern.
- (v) Programme of research.

B. Normal rainfall :

Average monthly rainfall specifying the period on which the figures are based.

C. Irrigation and drainage facilities :

- (i) (a) Whether available, if so, since when. (b) Type of facilities available.
- (ii) Whether there is a proper drainage system.

D. Soil type and soil analysis :

- (i) Broad soil type with depth, colour, and structure etc.
- (ii) Chemical analysis.
- (iii) Mechanical analysis.

E. No. of experiments :

No. of experiments conducted on different crops that have been included in the compendium.

Information under the following heads is to be read against the respective items as given below.

BASAL CONDITIONS

A. For experiments on annual crops :

- (i) (a) Crop rotation if any. (b) Previous crop. (c) Manuring of previous crop. (State amount and kind).
- (ii) (a) Soil type. (b) Soil analysis.
- (iii) Date of sowing/planting.
- (iv) Cultural practices.
- (a) Preparatory cultivation.
- (b) Method of sowing/planting.
- (c) Seed-rate.
- (d) Spacing.
- (e) No. of seedlings per hole.
- (v) Basal manuring with time and method of application.
- (vi) Variety.
- (vii) Irrigated or Unirrigated.
- (viii) Post-sowing/planting cultural operations.
- (ix) Rainsfall during crop season
- (x) Date of harvest.

B. For experiments on perennial crops :

- (i) History of site including manuring and other operations.
- (ii) (a) Soil type.
- (b) Soil analysis.
- (iii) Method of propagation of plants.
- (iv) Variety.
- (v) Date and method of sowing/planting.
- (vi) Age of seedlings at the time of planting.
- (vii) Basal dressing with time and method of application.
- (viii) Cultural operations during the year.
- (ix) Inter cropping if any.
- (x) Irrigated or Unirrigated.
- (xi) Rainfall during crop season.
- (xii) Date of harvest.

C. For experiments on cultivators' fields :

- (i) (a) Crop rotation, if any. (b) Previous crop. (c) Manuring of previous crop. (ii) Soil type in general. (iii) Basal manuring with time and method of application. (iv) Variety. (v) Cultural practices. (a) Preparatory cultivation. (b) Method of sowing. (c) Seed-rate. (d) Spacing. (e) No. of seedlings per hole. (vi) Period of sowing/planting. (vii) Irrigated or Unirrigated. (viii) Post-sowing/planting cultural operations. (ix) Rainfall during crop season. (x) Period of harvesting.

DESIGN**A. For experiments on annual crops :**

- (i) Abbreviations for design : C.R.D.—Completely Randomised Design. R.B.D.—Randomised Block Design, L. Sq.—Latin Square, Confd.—Confounded, Fact.—Factorial. (other designs and modifications of the above to be indicated in full). (ii) (a) No. of plots per block. (b) Block dimensions. (iii) No. of replications. (iv) Plot size. (a) Gross. (b) Net. (v) Border or guard rows kept. (vi) Whether treatments are randomised (separately in each block).

B. For experiments on perennial crops :

- (i) Abbreviations for designs : C.R.D.—Completely Randomised Design ; R.B.D.—Randomised Block Design ; L.Sq.—Latin Square ; Confd.—Confounded. (other designs and modifications of the above indicated in full). (ii) (a) No. of plots per block. (b) Block dimensions. (iii) No. of replications. (iv) No. of trees/plot. (v) Border or guard rows kept. (vi) Are treatments randomised.

C. For experiments on cultivators' fields :

- (i) Method of selection of experimental sites. (ii) No. and distribution of experiments. (iii) Plot size. (a) Gross. (b) Net. (iv) Whether treatments are randomised.

GENERAL**A. For experiments on annual crops :**

- (i) Crop conditions during growth with date of lodging, if any. (ii) Incidence of pests and diseases with control measures taken. (iii) Quantitative observations taken. (iv) In case of repetition in successive years—(a) from what year to what year, (b) whether treatments were assigned to the same plots in the same manner every year, (c) reference to combined analysis, if any. (v) In case of repetition in other places (a) names of the places along with reference and (b) reference to combined analysis, if any. (vi) Abnormal occurrences like heavy rains, frost, storm etc., if any. (vii) Any other important information.

B. For experiments on perennial crops :

- (i) Crop condition during the year. (ii) Incidence of pests and diseases with control measures taken. (iii) Quantitative observations taken. (iv) In case of repetition in successive years—(a) from what year to what year, (b) reference to combined analysis, if any. (v) Abnormal occurrences like heavy rains, frost, storm etc., if any. (vi) Any other important information.

C. For experiments on cultivators' fields :

- (i) Crop condition during growth. (ii) Incidence of pests and diseases with control measures taken. (iii) Quantitative observations taken. (iv) In case of repetition in successive years, (a) from what year to what year, (b) whether treatments were assigned to the same plots in the same manner every year, (c) reference to combined analysis, if any. (v) In case of repetition in other places names of places alongwith reference. (vi) Abnormal occurrences, like heavy rains, frost, storm etc., if any. (vii) Any other important information.

TABLE OF CONVERSIONS TO METRIC UNITS

1 foot	=	304.8 mm.
1 acre	=	0.404606 hectare.
1 gram	=	0.035274 ounce = 0.085735 tola = 0.017147 chatak
1 kg.	=	2.20462 pounds=1.07169 seers.
1 metric tone	=	0.9842 ton = 26.7923 maunds.
1 maund	=	0.373242 quintal = 37.3242 kg.
1 lb./ac.	=	1.12085 kg./hectare.
1 md./ac.	=	92.23002 kg./hectare = 0.9223 quintal/hectare.
1 ton/ac.	=	2.51071 metric tones/hectare.
1 gallon (Imp.)	=	4.54596 litres.

GLOSSARY OF VERNACULAR NAMES OF CROPS

Sl. No.	Name of Crop	Botanical Name	Assamese	Bengali	Oriya	Telugu	Tamil	Malayalam	Kannada	Marathi	Gujarati	Hindi	Punjabi

**MAP OF MADRAS STATE SHOWING
AGRO-CLIMATIC REGIONS, SOILS,
RAINFALL REGIONS, AGRICULTURAL
RESEARCH STATIONS ETC.**

MADRAS

1. General :

The State of Madras forms the southernmost State in the Indian Union and has an area of 32,085 thousand acres. It is bounded in the north by Mysore and Andhra Pradesh, on the east by the Bay of Bengal, on the south by the Indian Ocean and on the west by Kerala.

The State has two natural divisions—the mountainous ranges of the Western Ghats and the plain tract east of the Western Ghats. For administrative purposes, the State has been divided into 13 districts. The land utilisation statistics for Madras State are given in the Table 1 below :

TABLE 1

Land utilisation statistics of Madras State (1958-59)

(Area in '000 acres.)

1. Professional survey	32,085
2. Village papers (reporting area)	32,021
3. Forests	4,387
4. Land put to non-agricultural uses	3,109
5. Barren and unculturable land	2,469
6. Permanent pastures and other grazing land	929
7. Land under misc. crops such as trees	637
8. Culturable waste	2,000
9. Fallow lands other than current fallows	1,649
10. Current fallows	2,515
11. Net area sown	14,326
12. Area sown more than once	2,771

2. Soil types and agro-climatic regions :

Depending upon the types of soil and the agro-climatic conditions prevailing, the State can be divided into 4 divisions which are described below :

1. *Carnatic* : The three eastern districts of Chingleput, North Arcot and South Arcot form the carnatic region. The soils are predominantly red and sandy loam in texture. The soils are generally shallow having free drainage, the pH ranging from 6.5 to 8.0. In Chingleput, soils near the sea coast are high in salts especially sodium chloride. This region receives an annual rainfall between 800 and 1000 mm. in about 70 to 75 rainy days. The districts of Chingleput and South Arcot mainly receive rainfall from the north-east monsoon while the North Arcot district depends upon both the monsoons. The temperature varies between 24°C to 31°C.

2. *Central Districts* : This includes Salem and Coimbatore districts. The soils are of red and black type. In Coimbatore district, the soils are predominantly clay loam with good drainage. The rainfall varies between 500 to 750 mm. received in about 60 rainy days from both the monsoons.

3. *Southern Districts* : This region comprises the districts of Thanjavur, Tiruchirapalli, Ramanathapuram, Madurai, Tirunelveli and Kanyakumari. The soils are of alluvial type. Rainfall varies between 750 to 1000 mm. Thanjavur and Tiruchirapalli districts benefit more from the north-east monsoon than from the south-west monsoon and receive more rainfall than the other districts in this region. Kanyakumari receives more rain towards the western coast.

PARTICULARS OF RESEARCH STATIONS AND SOIL ANALYSIS

1. Regional Research Station, Aduthurai.

A. General information :

(i) Thanjavur district, two furlongs to the south of the Aduthurai Railway Station. The site is typical of the large Cauvery delta tract. During the initial lay out of the fields in blocks, gradients in both ways ranging from north to south and west to east have been provided for facilitating both easy irrigation and drainage. (ii) Represents the deltaic alluvial paddy tract with a climate somewhat hot in summer and moderately cold in winter. (iii) Established in 1922. (iv) Paddy after paddy followed by G.M or pulses is the normal cropping pattern. (v) Evolving improved strains of paddy and formulating improved techniques of cultivation for stepping up rice production are the main items in the programme of research.

B. Normal rainfall in mm.

June	July	Aug	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
41.7	58.9	83.6	125.2	183.6	250.2	146.1	40.9	8.4	7.5	35.9	73.4	1055.4

(Period on which the figures are based—N.A.).

C. Irrigation and drainage facilities.

(i) (a) Irrigation facilities are available since 1922 (b) Irrigated from Vinayakam channel and 4 filter points have been installed to facilitate summer cropping. (ii) Proper drainage system is available.

D. Soil type and soil analysis.

- (i) River Alluvium. Deep alluvial soil with brownish black to light brown colour.
(ii) Chemical analysis.

	Depth	
	0-6"	6"-12"

25. Coarse sand	12.7	15.4

(Figures 1 to 10 and 22 to 25 are expressed as % on moisture free basis. Rest on air dry basis).

E. No. of experiments :

Paddy—61, Cotton—8. Total=69.

2. Central Banana Research Station, Aduthurai.**A. General information :**

(i) Thanjavur District, one mile from Aduthurai Railway Station. The whole deltaic area is in the orbit of cyclonic tract and periodical cyclones have cut across the progress of research in the station. (ii) The *padugai* lands of the station represent the typical area of the silt deposited high level tract that is found all along the banks of the river Cauvery and its tributaries. (iii) Established in 1949. (iv) Perennial crop of banana is raised in the *padugai* lands and paddy or occasionally banana crop is raised in the wet lands. (v) Varietal collection, hybridization, study of plantation practices etc. are the main items of research.

B. Normal rainfall in mm.

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
41.66	58.93	83.57	125.22	183.64	250.19	146.05	40.89	8.38	7.62	35.81	73.41	1055.37

(Figures are based on the average for 10 years).

C. Irrigation and drainage facilities :

(i) (a) Irrigation facilities are available since 1953. (b) Two oil engines work during summer. (ii) No drainage facilities.

D. Soil type and soil analysis :

(i) Heavy alluvial clay soil to a depth of 5' to 6' with light brownish to black colour.
 (ii) Chemical analysis :

	Depth of the Soil		
	1'	2'	3'

(iii) Mechanical analysis—N.A.

E. No. of experiments :

Banana—6, Rotation expt.—1. Total=7.

3. Rice Research Station, Ambasamudram.

A. General information :

(i) Tirunelveli district, 2½ miles from Ambasamudram Railway Station. Plain land sloping from west to east. (ii) Established Tamraparni delta. (iii) Established in 1937. (iv) Paddy after paddy is the cropping pattern. (v) Manurial and cultural trials are the main items of research.

B. Normal rainfall in mm :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
28.32	42.06	11.33	26.74	157.58	232.89	109.55	79.55	39.17	70.41	86.94	79.79	957.33

(The period on which the figures are based is—N.A.)

C. Information and drainage facilities :

(i) (a) Irrigation facilities are available since 1937. (b) Tamraparni river irrigation system is the source of irrigation. (ii) Drainage facilities are available.

D. Soil type and soil analysis :

(i) Alluvial loam soil to a depth of 2' and red in colour, (ii) Chemical and (iii) Mechanical analysis of the soil N.A.

E. No. of experiments :

Paddy—25. Total=25.

4. Agricultural Research Station, Bhavanisagar.

A. General information to D. Soil type and soil analysis :

Details—N.A.

E. No. of experiments :

Bajra—16, Ragi—13, Tenai—4, Cotton—18, Groundnut—21 and Gingelly—8, Total=80.

5. Agricultural College and Research Institute, Coimbatore.

A. General information :

(i) Coimbatore district, 3 miles from Coimbatore Junction. (ii) A typical wet land of the tract. (iii) Established in 1906. (iv) Paddy, millets and vegetables etc. are the principal crops. (v) All kinds of agronomic, mycological and entomological experiments are the main items of research.

B. Normal rainfall in mm :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
34.8	37.2	53.1	74.4	166.3	112.7	35.5	13.7	10.6	16.7	52.5	36.5	644.0

(The period on which the figures are based—N.A.)

C. Irrigation and drainage facilities :

(i) (a) Irrigation facilities are available since 1906. (b) Tank is the source of irrigation. (ii) Drainage facilities are available.

D. Soil type and soil analysis

(i) Clay loam to a depth of 4' and black in colour. (ii) Chemical and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Paddy—23, Jowar—3, Ragi—2, Bhendi—10, Brinjal—8, Bittergauord—6, Radish—2, Ribbedgourd—3, Sweet Potato—27, Tomato—19, Tapioca—9, Cotton—4, Groundnut—1, Gingelly 1, Lucerne—1, Grass—3 and Glyricidia—1, Total=123.

6. Cotton Breeding Station, Coimbatore.

A. General information :

- (i) Coimbatore district, 3 miles from Coimbatore Junction. (ii) Level land without any undulations. A suitable tract for winter Commbodia and unirrigated Karunganny cotton.
- (iii) Established in 1922. (iv) Karunganni cotton—Bengal gram or cholam is the normal cropping pattern. (v) Breeding trials, agronomic trials and other fundamental studies on cotton, are the main aspects of research.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
41.14	45.97	33.78	56.13	142.24	119.89	42.93	12.45	9.14	24.77	55.88	54.86	639.1

(The period on which the figures are based is 39 years from 1922.)

C. Irrigation and drainage facilities :

- (i) (a) Irrigation facilities are available since 1922. (b) Wells are the source of irrigation.
- (ii) There is proper drainage system.

D. Soil type and soil analysis :

- (i) Red loam and black clayey soils 4' to 7' deep. (ii) Chemical analysis :

Particulars	Red soil	Black soil
	%	%
1. Loss on ignition (organic matter)	5.129	4.27
2. Insoluble mineral matter (sand etc.)	82.40	84.73
3. Iron	3.63	1.95
4. Aluminium	5.76	4.49
5. Lime	1.30	2.40
6. Magnesia	0.60	0.72
7. Potash	0.45	0.18

9. Carbondioxide	0.52	0.90
10. Phosphoric acid	0.065	0.03
11. Sulphuric acid	0.016	0.01
12. Nitrogen	0.07	0.032
13. Available Potash	0.021	0.014
14. Available P ₂ O ₅	0.030	0.009

(iii) Mechanical analysis :

Particulars	Red soil	Black soil
	%	%
1. Moisture	3.01	2.8
2. Fine gravel	8.0	9.5
3. Coarse sand	18.9	25.0
4. Fine sand	16.4	15.1
5. Silt	6.2	6.4
6. Clay	14.9	28.1

E. No. of experiments :

Cotton—17. Total=17.

7. Millet Breeding Station, Coimbatore.

A. General information :

- (i) Coimbatore District, 4 miles from Coimbatore Junction. Level land. (ii) Dry and garden lands of millet tracts. (iii) Established in 1923. (iv) Millets—pulses or cotton is the cropping pattern. (v) Breeding of millets is the programme of research.

B. Normal rainfall in mm.

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
30.7	31.5	38.9	42.7	156.5	129.5	33.4	16.0	3.8	16.0	67.6	46.0	612.6

(The period on which the figures are based is 1935—1947.)

C. Irrigation and drainage facilities :

- (i) (a) Irrigation facilities are available since 1949. (b) Bore-wells are the source of irrigation.
- (ii) Drainage facilities are available.

D. Soil type and soil analysis :

- (i) Loamy soil to a depth of 18" and brownish in colour. Sandy to clay, in different parts of the farm.
- (ii) Chemical analysis.

	0—6"	6"—12"

E. No. of experiments :

Jowar—5, Bajra—7, Ragi—4 and Mixed crop—3. Total=19.

8. Paddy Breeding Station, Coimbatore.**A. General information :**

- (i) Coimbatore district, 4 miles from Coimbatore Railway Station.
- (ii) Central region (Salem, Coimbatore) type of tract.
- (iii) Established in 1913.
- (iv) Paddy—paddy—cotton or groundnut is the cropping pattern.
- (v) Crop improvement by pureline selection, hybridisation, manurial trials and cultural trials are the main items of research.

B. Normal rainfall in mm.

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
56.8	78.9	20.3	27.4	120.1	139.1	35.1	10.2	4.3	14.9	56.3	64.8	628.2

(The period on which the figures are based is 10 years from 1950).

C. Irrigation and drainage facilities :

- (i) (a) Irrigation facilities are available.
- (b) Tank and bore-wells are the sources of irrigation.
- (ii) Drainage system is available.

D. Soil type and soil analysis :

- (i) Clayey soil to a depth of 5' to 6" and black in colour.
- (ii) Chemical analysis :

Total Moisture%	5.843
Total Potash%	0.5728
P ₂ O ₅ %	0.0471
Nitrogen%	0.0758
Available Potash%	0.0193
Available P ₂ O ₅ %	0.0064

(ii) Mechanical analysis—N.A.

E. No. of experiments :

Paddy—32. Total=32.

9. Central Sugarcane Research Station, Cuddalore.**A. General information :**

- (i) South Arcot district, 3 miles from Cuddalore N.T. Railway Station, situated on the northern side of Pennar and on the southern side of river Gadilam.
- (ii) Sandy alluvial soil near costal cyclonic belt area.
- (iii) Established in 1957.
- (iv) Sugarcane—ratoon—green manure crop—paddy is the cropping pattern with groundnut after ratoon sometimes.
- (v) Conducting agronomic, entomological, mycological trials on sugarcane is the programme of research.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
51.1	83.1	124.5	81.7	318.7	188.7	112.0	17.0	4.6	10.4	24.4	72.9	1089.1

(The period on which the figures are based is 10 years from 1951.)

C. Irrigation and drainage facilities :

- (i) (a) Irrigation facilities are available since 1957. (b) Lift irrigation. Two oil engines and eleven electric motors are used.
- (ii) Drainage facilities are available.

D. Soil type and soil analysis :

- (i) Alluvial soil of great depth, brown in colour and with coarse grained structure.
- (ii) Chemical analysis :

pH	6.8 to 8.5
Total N %	0.035
Total P ₂ O ₅ %	0.045
Total K ₂ O %	0.500
Organic carbon %	0.230

(iii) Mechanical analysis :

Clay %	21.3
Silt %	13.7
Coarse sand %	47.0
Fine sand %	15.3

E. No. of experiments :

Sugarcane—22. Total=22.

10. Sugarcane Research Station, Gudiyattam.**A. General information :**

- (i) North Arcot district, 1½ miles from Gudiyattam Railway Station with plain level fields.
- (ii) Garden land area with mostly sandy loam.
- (iii) Established in 1935.
- (iv) Sugarcane—paddy—G.M. crop is the cropping pattern.
- (v) Agronomic experiments on sugarcane is the programme of research.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
99.1	126.5	122.7	112.3	176.5	98.8	61.2	35.3	32.3	17.5	36.3	78.5	997.0

(The period on which the figures are based is—N.A.)

C. Irrigation and drainage facilities :

- (i) (a) Irrigation facilities are available since 1935. (b) Wells are the source of irrigation.
- (iii) Drainage facilities are available.

D. Soil type and soil analysis :

(i) Sandy loam soil. (ii) Chemical and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Sugarcane—8. Total=8.

11. Regional Research Station, Koilpatti.**A. General information :**

(i) Tirunelveli district, 1.05 Km. from Koilpatti Railway Station of level land. (ii) Rainfed black cotton tract. (iii) Established in 1901. (iv) Cotton—cumbu—cotton fodder *cholam* is the cropping pattern. (v) Agronomic research is the programme of research

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
11.4	11.7	36.6	78.7	167.9	178.3	86.4	27.4	12.7	40.6	94.7	62.5	808.9

(The period on which the figures are based is 10 years from 1947.)

C. Irrigation and drainage facilities :

(i) (a) and (b) No irrigation facilities. Only rainfed. (ii) Drainage facilities available.

D. Soil type and soil analysis :

(i) Black cotton soil to a depth of 5' to 8', black in colour and of clayey loam structure. (ii) Chemical analysis.

12. Paddy Farm, Nagercoil.**A. General information :**

(i) Kanyakumari district. (ii) to (v) N.A.

B. Normal rainfall in mm. :

Details—N.A.

C. Irrigation and drainage facilities :

(i) (a) Irrigation facilities available. (b) Tank irrigation. (ii) Drainage facilities available.

D. Soil type and soil analysis :

(i) Heavy clay alkaline in patches. (ii) Chemical and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Paddy—5. Total=5.

13. Agricultural Research Station, Nanjanad.

A. General information :

- (i) The Nilgiris district, 11 miles from Ootacamund Railway Station. Hilly region having an elevation of about 7028 ft. above mean sea level.
- (ii) Hilly tract of laterite soil type.
- (iii) Established in 1917.
- (iv) Potato-lupin or buck wheat is the cropping pattern.
- (v) All kinds of agronomic studies on potato are the main items of research.

B. Normal rainfall in mm.

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
84.8	198.1	69.5	57.9	71.4	52.1	20.0	4.5	5.8	13.0	32.6	79.0	688.7

(The period on which the figures are based is 5 years from 1958).

C. Irrigation and drainage facilities :

- (i) (a) Irrigation facilities are available. (b) Perennial rivers are the source of irrigation.
- (ii) There is proper drainage system.

D. Soil type and soil analysis :

- (i) Laterite soil. (ii) Chemical analysis as given below (Figures in %)

Moisture	4.70	Total Potash	0.13
Loss on ignition	14.04	Soda	0.41
Insolubles	55.22	Carbon dioxide	0.04
Iron	9.95	Total P ₂ O ₅	0.07

15. Agricultural Research Station, Pattukottai.

A. General information :

(i) Tanjavur district. Plain land without much undulations. (ii) Sandy loam tract brought under cultivation about 30 years back. (iii) Established in 1935. (iv) Paddy after paddy is the normal cropping pattern. (v) Agronomic experiments are main items of research.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
34.0	84.8	112.5	84.8	164.3	186.7	151.4	48.5	16.0	18.3	40.4	25.7	967.4

(Figures are based on 10 years data).

C. Irrigation and drainage facilities :

(i) (a) Irrigation facilities are available since 1937. (b) Cauvery Mettur project canal and wells are the source of irrigation. (ii) Drainage facilities are available.

D. Soil type and soil analysis :

(i) Sandy loam soil to a depth of 6' to 8', reddish in colour and sandy in structure. (ii) Chemical and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Paddy—35, Tapioca—2, Cotton—3 and Groundnut—2. Total=42.

16. Agriculture Research Station, Satyamangalam.

A. General information :

(i) Coimbatore district. (ii) to (v) N.A.

B. Normal rainfall in mm. :

Details—N.A.

C. Irrigation and drainage facilities :

Details—N.A.

D. Type of soil and soil analysis :

(i) Gravelly soil, (ii) Chemical and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Cotton—1, Total=1.

17. Regional Research Station, Tindivanam.

A. General information :

(i) South Arcot district, 2 miles from Tindivanam Railway Station. Sloping from west to east. (ii) Dry land tract with red loamy soils. (iii) Established in 1935. (iv) Groundnut after and groundnut, groundnut followed by millets or gingelly is the cropping pattern. (v) Crop improvement by adopting improved agronomic practices and breeding for improve dstrains of groundnut, gingelly and castor.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
50.8	115.0	146.3	88.6	216.4	168.6	79.7	29.2	13.4	11.4	21.8	—	941.2

(The figures are based on 10 years data from 1953).

C. Irrigation and drainage facilities :

- (i) (a) Irrigation facilities are available since 1948. (b) Wells and *Uttar kuttai* pond are the source of irrigation. (ii) Drainage facilities are available.

B. Soil type and soil analysis :

- (i) Red sandy loam to a depth of 6" to 29", red in colour and light sandy loam in soil structure. (ii) Chemical analysis.

Available N	250 lb./ac.
Available P ₂ O ₅	25 lb./ac.
Electric conductivity	—2
pH value	about 7.2

- (iii) Mechanical analysis—N.A.

E. No. of experiments :

Groundnut—36, Castor—6, Gingelly—12 and Mixed crop—3. Total=57.

18. Regional Millet Station, Tirupathur.

- A. General information to D. Soil type and soil analysis—N.A.

E. No. of experiments :

Mixed crop—3. Total=3.

19. Rice Research Station, Tirur.**A. General information :**

- (i) Chingleput district, about a mile from Sevapet Road Railway Station. (ii) Arid and dry tract with sandy loam soil. A portion of the farm is garden land which is irrigated from well. (iii) Established in 1942. (iv) Paddy after Paddy is the cropping pattern. (v) Breeding and agronomic trials on paddy.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
86.1	117.9	134.1	155.7	182.4	194.1	98.3	10.9	—	—	27.2	30.7	1037.4

(The figures are based on 8 years data from 1955).

C. Irrigation and drainage facilities :

- (i) (a) Irrigation facilities available. (b) Tank and well are the source of irrigation. (ii) Drainage facilities are available.

D. Soil type and soil analysis :

- (i) Sandy loam to a depth of 6" to 9", light grayish in colour. (ii) Chemical analysis.

P ₂ O ₅	0.035 to 0.041
N	0.073 to 0.074
pH	7.00 to 8.75

- (iii) Mechanical analysis—N.A.

E. No of experiments :

Paddy—38. Total=38.

Crop :- Paddy (*Samba*).**Ref :- M. 56(35).****Site :- Agri. Res. Stn., Aduthurai.****Type :- 'M'.**

Object :—To find out the relative merits of Urea, A/S and A/C as nitrogenous fertilizers for Paddy.

1. BASAL CONDITIONS :

- (i) (a) Fallow—Paddy. (b) Fallow. (c) Nil. (ii) (a) Clayey. (b) Refer soil analysis, Aduthurai. (iii) 1.8.1956/19, 20.9.1956. (iv) (a) 4 ploughings. (b) Transplanted. (c) 30 lb./ac. (d) 6"×6". (e) 2. (v) 5000 lb./ac. of G.L.+30 lb./ac. of P_2O_5 as Super. (vi) CO—25 (late). (vii) Irrigated. (viii) 2 weedings. (ix) 29.24". (x) 4.2.1957.

2. TREATMENTS :

All combinations of (1) and (2) + a control

- (1) 3 sources of N : $S_1 = A/S$, $S_2 = A/C$ and $S_3 = \text{Urea}$.
- (2) 4 levels of N : $N_1 = 15$, $N_2 = 30$, $N_3 = 45$ and $N_4 = 60$ lb./ac.

3. DESIGN :

- (i) R.B.D. (ii) (a) 13. (b) N.A. (iii) 4. (iv) (a) $42' \times 10\frac{1}{2}'$. (b) $41\frac{1}{2}' \times 10'$. (v) N.A. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Yield of grain. (iv) (a) 1956—1958. (b) Yes. (c) Nil. (v) (a) Pattukkottai and Tirur. (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

- (i) 3446 lb./ac. (ii) 303.6 lb./ac. (iii) Effect of N alone is significant. (iv) Av. yield of grain in lb./ac.

Control = 3449 lb./ac.

	N_1	N_2	N_3	N_4	Mean
S_1	3784	3562	3358	3309	3503
S_2	3627	3482	3286	3198	3399
S_3	3562	3466	3449	3263	3435
Mean	3658	3503	3364	3257	3446

$$\text{S.E. of } S \text{ marginal mean} = 75.9 \text{ lb./ac.}$$

$$\text{S.E. of } N \text{ marginal mean} = 87.6 \text{ lb./ac.}$$

$$\text{S.E. of body of table or control mean} = 151.8 \text{ lb./ac.}$$

Crop :- Paddy (*Samba*).**Ref :- M. 57(25).****Site :- Agri. Res. Stn., Aduthurai.****Type :- 'M'.**

Object :—To find out the relative merits of Urea, A/S and A/C as nitrogenous fertilizers for Paddy.

1. BASAL CONDITIONS :

- (i) (a) Paddy—Paddy. (b) Paddy. (c) As per treatments. (ii) (a) Clayey. (b) Refer soil analysis, Aduthurai. (iii) 6.8.1957/22.9.1957. (iv) (a) Digging with *mummatty* and preparing experimental plots. (b) Transplanted. (c) 30 lb./ac. (d) 6"×6". (e) 2. (v) 50:0 lb./ac. of G.L. + 30 lb./ac. of P_2O_5 as Super. (vi) CO—25 (late). (vii) Irrigated. (viii) Weeding twice. (ix) 28.78". (x) 10.2.1958.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 56(35) above.

RESULTS :

- (i) 3079 lb./ac. (ii) 221.6 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

Control = 2939 lb./ac.

	N ₁	N ₂	N ₃	N ₄	Mean
S ₁	3103	3200	3240	3049	3148
S ₂	3122	3004	3016	3010	3038

S.E. of body of table					= 130.2 lb./ac.

Crop :- Paddy (*Kurucaj*).**Ref :- M. 54(78).****Site :- Agri. Res. Stn., Aduthurai.****Type :- 'M'.**

Object :—To find out the usefulness of sea weed compost as compared to other nitrogenous manures of Paddy.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) 5000 lb./ac. of G.L.+150 lb./ac. of Super applied at the time of planting and 150 lb./ac. of A/S top-dressed. (ii) (a) Alluvial clay. (b) Refer soil analysis, Aduthurai. (iii) 7.7.1954-31.7.1954. (iv) (a) Ploughed with mould board plough thrice and levelled with Burmese Settun. (b) N.A. (c) 30 lb./ac. (d) 6" × 6". (e) N.A. (v) Nil. (vi) Adt. 3 (early). (vii) Irrigated. (viii) 2 weedings. (ix) 13.03" (x) 17.10.1954.

2. TREATMENTS:

6 sources of 30 lb./ac. of N : S_0 =Nil, S_1 =Sea weed compost, S_2 =F.W.C., S_3 =C.M., S_4 =G.L. and S_5 =A/S. S_1 to S_4 were applied before transplanting and S_5 was given as top-dressing 6 weeks after planting.

3. DESIGN :

(i) R.B.D. (ii) 6. (b) N.A. (iii) 6. (iv) (a) 24'×12'. (b) 23½'×11½'. (v) 1 row of plants left as border. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Height measurement, tiller count and yield of grain. (iv) (a) to (c) No. (v) (a) and (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

(i) 2602 lb./ac. (ii) 193.7 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	S_0	S_1	S_2	S_3	S_4	S_5
Av. yield	2384	2317	2478	3485	2814	3136
S.E./mean = 79.1 lb./ac.						

Crop :- Paddy (*Thaladi*).

Ref :- M. 54(79).

Site :- Agri. Res. Stn., Aduthurai.

Type :- 'M'.

Object :- To find out the usefulness of sea weed compost as manure for Paddy as compared to other nitrogenous manures.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) 5000 lb./ac. of G.L.+150 lb./ac. of Super applied at planting+150 lb./ac. of A/S top-dressed. (ii) (a) Alluvial clay. (b) Refer soil analysis, Aduthurai. (iii) 14.10.1954/13.11.1954. (iv) (a) Mummaty digging after wetting the plots to get the required puddle. (b) N.A. (c) 30 lb./ac. (d) 6"×6". (e) N.A. (v) Nil. (vi) Adt. 25 (late). (vii) Irrigated. (viii) 2 weedings. (ix) 26.87". (x) 14.3.1955.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 54(78) on page 2.

5. RESULTS :

(i) 1809 lb./ac. (ii) 184.1 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	S_0	S_1	S_2	S_3	S_4	S_5
Av. yield	1625	1638	1759	1813	1894	2122
S.E./mean = 75.2 lb./ac.						

Crop :- Paddy (*Kuruvai*).

Ref :- M. 54(80).

Site :- Agri. Res. Stn., Aduthurai.

Type :- 'M'.

Object :- To compare the manurial value of sesbania leaf in green and dry forms for Paddy crop.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) 5000 lb./ac. of G.L.+150 lb./ac. of Super applied at planting+150 lb./ac. of A/S top-dressed. (ii) (a) Alluvial clay. (b) Refer soil analysis, Aduthurai. (iii) 19.6.1954/22.7.1954. (iv) (a) Ploughed with mould board plough thrice and levelled with Burmese Settun once. (b) N.A. (c) 30 lb./ac. (d) 6"×6". (e) N.A. (v) Nil. (vi) Adt.—20 (early). (vii) Irrigated. (viii) 2 weedings. (ix) 13.03". (x) 4.10.19 4.

2. TREATMENTS :

1. No manure (control).
2. *Sesbania* in green form at 5000 lb./ac.
3. *Sesbania* in dry form equivalent to 5000 lb./ac. of G.L.

The manures were applied and trampled in just before planting.

3. DESIGN :

(i) R.B.D. (ii) (a) 3. (b) N.A. (iii) 8. (iv) (a) $18' \times 12'$. (b) $17\frac{1}{2}' \times 11\frac{1}{2}'$. (v) 1 row left as guard row. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) (a) *Soorai* and stem-borer were noticed in mild form. Dusted with B.H.C. 10%. (iii) Height measurement, tiller count and yield of grain. (iv) (a) 1954—contd. (b) No. (c) Nil. (v) (a) and (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 3049 lb./ac. (ii) 157.5 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	1	2	3
Av. yield	2836	3298	3013
S.E./mean = 55.7 lb./ac.			

Crop :- Paddy (*Thaladi*).

Ref :- M. 54(81).

Site :- Agri. Res. Stn., Aduthurai.

Type :- 'M'.

Object :—To compare the manurial value of sesbania leaf in green and dry forms for Paddy crop.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) 5000 lb./ac. of G.L.+ 150 lb./ac. of Super applied at planting+150 lb./ac. of A/S top-dressed. (ii) (a) Alluvial clay. (b) Refer soil analysis, Aduthurai. (iii) 6.9.1954/23.10.1954. (iv) (a) *Mummatty* digging after wetting the plots to get the required puddle. (b) N.A. (c) 30 lb./ac. (d) $6'' \times 6''$. (e) N.A. (v) Nil. (vi) Adt. 25 (medium). (vii) Irrigated. (viii) 2 weedings. (ix) 26.87". (x) 20.2.1955.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 54'80 on page 3.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Height measurement, tiller count and yield of grain. (iv) (a) 1954—contd. (b) No. (c) Nil. (v) (a) and N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 2144 lb./ac. (ii) 114.3 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	1	2	3
Av. yield	1970	2298	2164
S.E./mean = 40.4 lb./ac.			

Crop :- Paddy (*Kuruvai*).

Ref :- M. 59(108).

Site :- Agri. Res. Stn., Aduthurai.

Type :- 'M'.

Object :—To find out the effect of the application of P direct to Paddy and through G.M. crop preceding Paddy.

1. BASAL CONDITIONS :

(i) (a) to (c) As per treatments. (ii) (a) Sandy loam. (b) Refer soil analysis, Aduthurai. (iii) 6.7.1959/29.7.1959. (iv) (a) 3 ploughings. (b) N.A. (c) 30 lb./ac. (d) $6'' \times 6''$. (e) 2. (v) As per treatments. (vi) Adt. 3 (early). (vii) Irrigated. (viii) 2 weedings. (ix) N.A. (x) 14.10.1959.

2. TREATMENTS :

Treatments in one direction :

6 sources of P_2O_5 each at 45 lb./ac. : P_0 =No P_2O_5 , P_1 =Super, P_2 =Dical. Phos., P_3 =Rock Phos., P_4 =Hyper Phos. and P_5 =B.M.

Treatments in orthogonal direction :

4 green manures : M_0 =No G.M., M_1 =*Sesbania*, M_2 =*Kolinji* and M_3 =*Pillipesara*. P_2O_5 applied to G.M. crop under M_1 , M_2 and M_3 and to Paddy crop under M_0 .

3. DESIGN :

- (i) Strip-plot. (ii) (a) 24. (b) N.A. (iii) 5. (iv) (a) and (b) $20' \times 12'$. (v) Nil. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Yield of grain. (iv) (a) 1959—1960. (b) No. (c) Nil. (v) (a) Coimbatore and Tirur. (b) N.A. (vi) Nil. (vii) Expt. was conducted by Agronomist, Coimbatore.

5. RESULTS :

- (i) 2351 lb./ac. (ii) (a) 729.8 lb./ac. (b) 508.3 lb./ac. (c) 293.4 lb./ac. (iii) Main effect of P is highly significant and of M is significant. Interaction $P \times M$ is not significant. (iv) Av. yield of grain in lb./ac.

	P_0	P_1	P_2	P_3	P_4	P_5	Mean
M_0	2313	2492	2490	2879	2230	2561	2494
M_1	2566	2146	2380	2815	2118	2541	2428
M_2	3034	2323	2730	3174	2545	2696	2750
M_3	2474	2146	2370	2830	2253	2637	2452
Mean	2597	2277	2493	2925	2287	2609	2531

S.E. of difference of two

- 1. P marginal means = 188.4 lb./ac.
- 2. M marginal means = 160.7 lb./ac.
- 3. P means at the same level of M = 281.2 lb./ac.
- 4. M means at the same level of P = 214.3 lb./ac.

Crop :- Paddy (*Kuruvai*).

Ref :- M. 58(80).

Site :- Agri. Res. Stn., Aduthurai.

Type :- 'M'.

Object :—To determine the efficacy of applying A/S in fractional doses at different phases of crop growth of Paddy.

1. BASAL CONDITIONS :

- (i) (a) Paddy—Paddy. (b) Paddy. (c) 5000 lb./ac. of G.L.+150 lb./ac. of Super+150 lb./ac. of A/S. (ii) (a) Alluvial loamy. (b) Refer soil analysis, Aduthurai. (iii) 21.7.1958/12.8.1958. (iv) (a) 3 to 4 ploughings. (b) Transplanted. (c) 30 lb./ac. (d) $10'' \times 4''$. (e) 2. (v) 150 lb./ac. of Super+5000 lb./ac. of G.L. (vi) Adt. 3 (early). (vii) Irrigated. (viii) 2 weedings. (ix) 18.55". (x) 25.10.1958.

Crop :- Paddy (*Kharif*).**Ref :- M. 54(3).****Site :- Agri. Res. Stn., Nagercoil.****Type :- 'M'.**

Object :—To study the effect of time of application of Super and A/S in split doses on Paddy.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) Nil. (ii) (a) Heavy 'clay. Alkaline in patches. (b) Refer soil analysis, Nagercoil. (iii) 10.9.1954/14.10.1954. (iv) (a) The field was dug with *mummatty*. (b) Planting in lines. (c) 16 lb./ac. (d) 10"×10". (e) 1. (v) 4000 lb./ac. of G.L. (vi) *Volsiramurdan* (late). (vii) Irrigated. (viii) 2 weedings and 2 intercultures. (ix) 20.4". (x) 28.2.1955.

2. TREATMENTS :

16 treatments of different levels of A/S and Super applied at 4 different times.

Treatment no.	A/S (in lb./ac.)	Super (in lb./ac.)	Treatment no.	A/S (in lb./ac.)	Super in lb./ac.
1.	100t ₁	100t ₁	9.	100t ₁ +100t ₃	200t ₁
2.	100t ₁	200t ₁	10.	100t ₁ +50t ₂ +50t ₄	100t ₁ +100t ₂
3.	100t ₃	100t ₁	11.	100t ₁ +50t ₂ +50t ₄	200t ₁
4.	100t ₃	100t ₃	12.	100t ₂ +100t ₄	200t ₁
5.	150t ₂	150t ₂	13.	100t ₂ +100t ₄	100t ₁ +100t ₂
6.	150t ₂	100t ₁ +50t ₂	14.	100t ₂ +100t ₄	200t ₂
7.	100t ₁ +100t ₂	100t ₁ +100t ₂	15.	200t ₂	200t ₁
8.	100t ₁ +100t ₂	200t ₁	16.	200t ₃	200t ₁

4 times of application : t₁=one day before transplanting, t₂=3 weeks after transplanting, t₃=4½ weeks after transplanting, t₄=6 weeks after transplanting.

3. DESIGN :

(i) Completely balanced lattice. (ii) (a) 4 blocks of 4 plots each per replication. (b) 16. (iii) 5. (iv) (a) 52'×11'. (b) 50'×9'. (v) One foot bund between plots. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Number of tillers, height of plants and grain yield. (iv) (a) 1954—1956. (b) and (c) Yes. (v) (a) and (b) Nil. (vi) and (vii) Nil.

5. RESULTS:

(i) 4445 lb./ac. (ii) 206.0 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of grain in lb./ac.

Treatment	1	2	3	4	5	6	7	8
Av. yield	4183	4020	4390	4267	4344	4524	4301	4492
Treatment	9	10	11	12	13	14	15	16
Av. yield	4378	4374	4517	4749	4851	4668	4469	4594

S.E/mean = 92.0 lb./ac.

Crop :- Paddy (Rabi).

Ref :- M. 55(2).

Site :- Agri. Res. Stn., Nagercoil.

Type :- 'M'.

Object :—To study the effect of different combinations and time of application of Super and A/S on Paddy.

1. BASAL CONDITIONS:

(i) (a) Nil. (b) Paddy. (c) As per treatments. (ii) (a) Heavy clay alkaline in patches. (b) Refer soil analysis Nagercoil. (iii) 18.5.1955/18.6.1955. (iv) (a) The field was dug with *mummatty*. (b) Transplanted in lines. (c) 16 lb./ac. (d) 6"×6". (e) 1. (v) 10,000 lb./ac. of compost manure. (vi) ASD. 1 (early). (vii) Irrigated. (viii) Two weedings and two intercultures. (ix) 8.4". (x) 10.9.1955.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 54(3) on page 34..

5. RESULTS :

(i) 4336 lb./ac. (ii) 285 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	1	2	3	4	5	6	8
Av. yield	4220	4161	3647	3996	4084	4452	4501
Treatment	9	10	11	12	13	14	16
Av. yield	4472	4520	4540	4559	4326	4443	4578

S.E/mean 128.0 lb./ac.

Crop :- Paddy (*Kharif*).**Ref :- M. 55(4).****Site :- Paddy Farm, Nagercoil.****Type :- 'M'.**

Object :—To study the effect of time of application of Super and A/S in split doses of Paddy.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) As per treatments. (ii) (a) Heavy clay—alkaline in patches. (b) Refer soil analysis, Nagercoil. (iii) 15.8.1955/24.10.1955. (iv) (a) *Mummatty* digging. (b) Transplanted. (iv) (a) 5 ploughings. (b) Transplanted. (c) 30 lb./ac. (d) 10" x 4". (e) 2. (v) 5000 lb./ac. of G.L.+150 lb./ac. of Super. (vi) PLR-2 (early). (vii) Irrigated. (viii) 2 weedings. (ix) 6.5". (x) 25.4.1960.

2. TREATMENTS to 4. GENERAL

Same as in expt. no. 58(109) on page 40.

5. RESULTS :

- (i) 1532 lb./ac. (ii) 167.1 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	T ₁	T ₂	T ₃	T ₄	T ₅
Av. yield	1428	1590	1548	1537	1559
S.E./mean = 68.2 lb./ac.					

Crop :- Paddy (*Samba*).

Ref :- M. 58(110).

Site :- Agri. Res. Stn., Palur.

Type :- 'M'.

Object :—To find out the suitable time of application of A/S to Paddy.

1. BASAL CONDITIONS :

- (i) (a) Nil. (b) Paddy. (c) 5000 lb./ac. of G.L.+150 lb./ac. of Super+30 lb./ac. of N as A/S. (ii) (a) Clayey loam. (b) Refer soil analysis, Palur. (iii) 2.9.1958/25.10.1958. (iv) (a) 5 ploughings. (b) Transplanted. (c) 30 lb./ac. (d) 10" x 5". (e) 2. (v) 5000 lb./ac. of G.L.+150 lb./ac. of Super. (vi) CO—25 (late). (vii) Irrigated. (viii) 2 weedings. (ix) 32.5". (x) 9.3.1959.

2. TREATMENTS :

5 times of application of 30 lb./ac. of N as A/S : T₁=2 months after planting, T₂= $\frac{1}{2}$ at the time of planting + $\frac{1}{2}$ two months after planting, T₃= $\frac{1}{2}$ at the time of planting + $\frac{1}{2}$ a week prior to flowering, T₄= $\frac{1}{2}$ at the time of planting + $\frac{1}{2}$ one month after planting + $\frac{1}{2}$ two months after planting and T₅= $\frac{1}{2}$ at the time of planting + $\frac{1}{2}$ one month after planting + $\frac{1}{2}$ a week prior to flowering.

3. DESIGN :

- (i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 6. (iv) (a) $30' \times 7\frac{1}{2}'$. (b) $29'7'' \times 6'8''$. (v) N.A. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (i') Nil. (iii) Yield of grain. (iv) (a) 1958—1960. (b) Yes. (c) Nil. (v) (a) Coimbatore, Aduthurai, Ambasamudram and Tirur. (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

- (i) 3108 lb./ac. (ii) 506 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	T ₁	T ₂	T ₃	T ₄	T ₅
Av. yield	3099	2937	3232	2945	3328

S.E /mean = 206.6 lb./ac.

Crop :- Paddy (*Samba*).

(x) 29.2.1960.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 58(110) on page 41.

5. RESULTS :

- (i) 3773 lb./ac. (ii) 332.4 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	T ₁	T ₂	T ₃	T ₄	T ₅
Av. yield	3832	3747	3767	3724	3795

S.E /mean = 135.7 lb./ac.

Crop :- Paddy (*Samba*).

Ref :- M. 55(60).

Site :- Agri. Res. Stn., Palur.

Type :- 'M'.

Object :—To find out the direct manurial value of organic and inorganic manures and to find out the necessity of liming to Paddy soils for correcting acidity.

1. BASAL CONDITIONS :

- (i) (a) Nil. (b) Paddy. (c) As per treatments. (ii) (a) Clayey loam. (b) Refer soil analysis, Palur. (iii) 31.7.1955/15.9.1955. (iv) (a) 5 ploughings. (b) Transplanting in rows. (c) 30 lb./ac. (d) 6"×6". (e) 2. (v) Nil. (vi) CO—25 (late). (vii) Irrigated. (viii) 2 weedings. (ix) 26.28". (x) 22.2.1956.

2. TREATMENTS :**Main-plot treatments :**

5 sources of N at 60 lb./ac. as B.D. : B_0 =No B.D., B_1 =F.Y.M., B_2 =Compost, B_3 =G.M. and B_4 =A/S.

Sub-plot treatments :

All combinations of (1), (2) and (3)

(1) 2 levels of P_2O_5 as Super : $P_0=0$ and $P_1=60$ lb./ac.

(2) 2 levels of K_2O as Pot. Sul. : $K_0=0$ and $K_1=60$ lb./ac.

(3) 2 levels of lime : $L_0=0$ and $L_1=1500$ lb./ac.

3. DESIGN :

- (i) Split-plot. (ii) (a) 5 main-plots/block ; 8 sub-plots/main-plot. (b) $64' \times 250'$. (iii) 4. (iv) (a) $16' \times 25'$.
 (b) $15\frac{1}{2}' \times 24\frac{1}{2}'$. (v) N.A. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Yield, tiller and height observations. (iv) (a) 1952—contd. (b) Yes. (c) Nil.
 (v) (a) Aduthurai. (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

- (i) 3236 lb./ac. (ii) (a) 819.4 lb./ac. (b) 265.1 lb./ac. (iii) Main effect of K is highly significant. Effect of L is significant. No other effect is significant. (iv) Av. yield of grain in lb./ac.

	B ₀	B ₁	B ₂	B ₃	B ₄	L ₀	L ₁	K ₀	K ₁	Mean

Object :—Type IX—To study the effect of N, P and organic manures on the yield of Paddy.

1. BASAL CONDITIONS :

- (i) (a) Paddy—Paddy. (b) Paddy. (c) 3000 lb./ac. of G.M. (ii) (a) Clayey loam. (b) N.A. (iii) 26.6.1955/23.7.1955. (iv) (a) 4 ploughings. (b) Transplanting. (c) 50 lb./ac. (d) 4"×4". (e) 2. (v) Nil. (vii) Adt. 3 (early). (vii) Irrigated. (viii) N.A. (ix) 19.68". (x) 4.10.1955.

2. TREATMENTS :

Same as in expt. no. 54(TCM) Type IX on page 71.

3. DESIGN :

- (i) 3³ confd. (ii) (a) 9 plots/block ; 3 blocks/replications. (b) N.A. (iii) 1. (iv) (a) 26'×17'. (b) 24'×15'. (v) 1'×1'. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Grain yield. (iv) (a) 1954—contd. (b) No. (c) Nil. (vi) and (vii) Nil.

5. RESULTS :

- (i) 2703 lb./ac. (ii) 157.2 lb./ac. (iii) N effect alone is significant. (iv) Av. yield of grain in lb./ac.

	N ₀	N ₁	N ₂	Mean	F ₀	F ₁	F ₂
P ₀	2435	2607	2783	2608	2565	2586	2673
P ₁	2535	2743	2826	2701	2697	2700	2707
P ₂	2534	2851	3014	2800	2581	2740	3078
Mean	2501	2734	2875	2703	2614	2675	2819
F ₀	2296	2641	2906				
F ₁	2513	2692	2821				
F ₂	2695	2867	2896				

S.E. of any marginal mean = 52.4 lb./ac.
 S.E. of body of any table = 90.8 lb./ac.

Crop :- Paddy.

Ref :- M. 55(TCM).

Site :- M.A.E. Farm, Aduthurai.

Type :- 'M'.

Object :—Type X—To study the efficiency of different nitrogenous fertilizers.

1. BASAL CONDITIONS :

(i) (a) Paddy—Paddy. (b) Paddy. (c) 5 C.L./ac. of F.Y.M. (ii) (a) Clayey loam. (b) N.A. (iii) 26.6.1955/24.7.1955. (iv) (a) 4 ploughings. (b) Transplanting. (c) 50 lb./ac. (d) 4'×4". (e) 2. (v) 20 lb./ac. of P₂O₅ as Triple Super. (vi) Adt. 3 (early). (vii) Irrigated. (viii) Weeding twice. (ix) 19.68". (x) 4.10.1955.

2. TREATMENTS :

All combinations of (1) and (2)+2 controls (No N).

- (1) 3 levels of N : N₁=20 lb./ac. of N, N₂=40 lb./ac. and N₃=60 lb./ac.
- (2) 4 sources of N : S₁=A/S, S₂=A/C, S₃=A/S/N and S₄=Nitro-chalk.

3. DESIGN :

(i) R.B.D. (ii) (a) 14. (b) N.A. (iii) 4. (iv) (a) 46'×10'. (b) 44'×8'. (v) 1'×1'. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Yield of grain. (iv) (a) 1954—contd. (b) No. (c) Nil. (v) to (vii) N.L.

5. RESULTS :

(i) 2656 lb./ac. (ii) 141.5 lb./ac. (iii) N effect and control vs. others are highly significant. Others are not significant. (iv) Av. yield of grain in lb./ac.

Control = 2269 lb./ac.

	S ₁	S ₂	S ₃	S ₄	Mean
N ₁	2645	2674	2678	2581	2645
N ₂	2682	2842	2845	2865	2809
N ₃	2666	2769	2783	2614	2708
Mean	2664	2762	2769	2687	2721

S.E. of N marginal mean = 35.4 lb./ac.
 S.E. of S marginal mean = 40.8 lb./ac.
 S.E. of body of table = 70.8 lb./ac.
 S.E. of control mean = 50.1 lb./ac.

Crop :- Paddy.**Ref :- M. 56(MAE).****Site :- M.A.E. Farm, Aduthurai.****Type :- 'M'.**

Object :—Type II—To study the manurial requirements of Paddy.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) 3000 lb./ac. of G.L. (ii) (a) Coastal alluvium-clayey loam. (b) N.A. (iii) 25.7.1956/17.8.1956. (iv) (a) 4 ploughings. (b) Transplanting. (c) to (e) N.A. (v) Nil. (vi) Adt. 3 (early). (vii) Irrigated. (viii) Two weedings. (ix) 27.71". (x) 3.11.56.

2. TREATMENTS :

All combinations of (1), (2), (3) and (4).

- (1) 3 levels of N as A/S : $N_0=0$, $N_1=30$ and $N_2=60$ lb./ac.
- (2) 3 levels of P_2O_5 as Triple Super : $P_0=0$, $P_1=30$ and $P_2=60$ lb./ac.
- (3) 3 levels of K_2O as Mur. Pot. : $K_0=0$, $K_1=30$ and $K_2=60$ lb./ac.
- (4) 2 levels of organic manure : $F_0=0$ and $F_1=5000$ lb./ac.

Treatments applied in three phases : X—manuring every year; Y—manuring in alternate years starting from 1st year and Z—manuring in alternate years starting from 2nd year.

Nutrient contents of organic manure are N=0.65%, $P_2O_5=0.50\%$ and $K_2O=1.20\%$.

3. DESIGN :

(i) $3^3 \times 2$ confd. (ii) (a) 9 plots/block (each plot split for three phases of manuring). (b) N.A. (iii) 1. (iv) (a) $18' \times 16'$. (b) $16' \times 14'$. (v) $2' \times 2'$. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Grain yield. (iv) (a) to (c) —. (v) to (vii) Nil.

5. RESULTS :

(i) 2810 lb./ac. (ii) 76.53 lb./ac. (iii) Effect of N, P and $N \times K$ are highly significant. $P \times K$ and $F \times P$ effects are significant, while other effects are not significant. (iv) Av. yield of grain in lb./ac.

	N_0	N_1	N_2	K_0	K_1	K_2	F_0	F_1	Mean

Crop :- Paddy.**Ref :- M. 57(MAE).****Site :- M.A.E. Farm, Aduthurai.****Type :- 'M'.**

Object :—Type IV—To find out the residual effect of P applied to previous legume crop on the yield of Paddy.

1. BASAL CONDITIONS :

- (i) (a) Paddy—Paddy—Fallow. (b) Paddy. (c) 5 C.L./ac. of F.Y.M. (ii) (a) Clayey loam. (b) N.A. (iii) 24.6.1957/17.7.1957 legumes sown on 8.3.1957. (iv) (a) 4 ploughings. (b) Transplanting. (c) 50 lb./ac. (d) 6'×6". (e) 2. (v) As per treatments. (vi) Adt.—3 (early). (vii) Irrigated. (viii) 2 weedings. (ix) 29". (x) 2.10.1957.

2. TREATMENTS :**Main-plot treatments :**

All combinations of (1) and (2)+ a control (no G.M.).

(1) 2 legume crops preceding Paddy : $L_1 = Kolinji$ and $L_2 = Pillipesara$.

(2) 3 levels of P_2O_5 applied to legumes : $P_0 = 0$, $P_1 = 40$ and $P_2 = 80$ lb./ac.

Sub-plot treatments :

3 levels of N : $N_0 = 0$, $N_1 = 15$ and $N_2 = 30$ lb./ac.

N applied as A,S and P_2O_5 as Triple Super.

3. DESIGN :

- (i) Split-plot. (ii) 'a' 7 main-plots/block; 3 sub-plots/main-plots. (b) N.A. (iii) 3. (iv) (a) 30'×15'. (b) 28'×13'. (v) 2'×2'. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Yield of grain. (iv) (a) 1957—contd. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 2053 lb./ac. (ii) (a) 111.7 lb./ac. (b) 67.3 lb./ac. (iii) P, 'control vs. others' N, $N \times L$, $N \times L \times P$ and $N \times$ 'control vs. others' effects are highly significant. L and LP effects are significant. Other effects are not significant. (iv) Av. yield of grain in lb./ac.

$N_0 = 1703$, $N_1 = 2017$ and $N_2 = 1927$ lb./ac. in fallow plots.

	N_0	N_1	N_2	Mean	P_0	P_1	P_2
L_1	1912	2081	2141	2045	1902	2009	2223
L_2	1919	2128	2305	2117	1874	2228	2250
Mean	1915	2105	2223	2081	1888	2119	2236
P_0	1744	1912	2009				
P_1	1957	2162	2236				
P_2	2045	2240	2424				

S.E. of difference of two

1. LP marginal means = 52.7 lb./ac.
2. N marginal means = 20.8 lb./ac.
3. N means at the same level of LP = 54.9 lb./ac.
4. LP means at the same level of N = 69.2 lb./ac.

Crop :- Paddy (Rabi).

Ref :- M. 58(MAE).

Site :- M.A.E. Farm, Aduthurai.

Type :- 'M'.

Object :—Type VI—To find out the residual effect of P applied to previous legume crops on the yield of Paddy.

BASAL CONDITIONS :

(i) (a) Paddy—Paddy. (b) Paddy. (c) N.A. (ii) (a) Clayey loam. (b) N.A. (iii) 30.8.1958/12.10.1958. (iv) 2 to 4 ploughings. (b) Transplanted. (c) 50 lb./ac. (d) 5"×5". (e) 2 to 3. (v) Nil. (vi) CO—25 late. (vii) Irrigated. (viii) 2 weedings. (ix) 18.9". (x) 20.2.1959.

2 TREATMENTS and 3. DESIGN :

Same as in expt. no. 56(MAE) Type VI on page 79.

4. GENERAL :

(i) Satisfactory. (ii) Severe incidence of *Helminthosporium* in early stages and stem-borer in the flowering stage. Spraying Micop and Solidol. (iii) Grain yield. (iv) (a) 1958—contd. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 2060 lb./ac. (ii) 495.7 lb./ac. (iii) 'Control vs. others' effect is highly significant. P effect is significant. Other effects are not significant. (iv) Av. yield of grain in lb./ac.
 Control = 1753 lb./ac.

	S ₁	S ₂	S ₃	Mean	M ₁	M ₂	M ₃
P ₁	2021	2043	2085	2050	1928	2079	2142
P ₂	2120	2233	2164	2172	2244	2052	2222
Mean	2071	2138	2124	2111	2086	2065	2182
M ₁	2131	2012	2115				
M ₂	2041	2057	2098				
M ₃	2041	2345	2160				

S.E. of S or M marginal means = 101.2 lb./ac.
 S.E. of P marginal means = 82.6 lb./ac.
 S.E. of body of P×S or P×M table or control mean = 143.1 lb./ac.
 S.E. of body of S×M table = 175.3 lb./ac.

Crop :- Paddy (*Kharif*).

Site :- M.A.E. Farm, Aduthurai.

Ref :- M. 59(MAE).

Type :- 'M'.

Object :—Type II—To find out the direct, residual and cumulative effects of N, P and K and F.Y.M. on Paddy.

1. BASAL CONDITIONS :

(i) (a) Paddy—Paddy. (b) Paddy. (c) As per treatments. (ii) (a) Clayey loam. (b) N.A. (iii) *Kharif*: 29.6.1959/19.7.1959. *Rabi*: 6.9.1959/19.10.1959. (iv) (a) 3 diggings. (b) Transplanting. (c) 50 lb./ac. (d) *Kharif*: 4"×4", *Rabi*: 5"×5". (e) 2 to 3. (v) Nil. (vi) Adt. 3 (early). (vii) Irrigated. (viii) 2 weedings. (ix) *Kharif*: 4.01", and *Rabi*: 26.39". (x) *Kharif*: 7.10.1959 and *Rabi*: 20.2.1960.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 56 (MAE) Type II on page 70.

4. GENERAL :

(i) Satisfactory. During *Kharif* lodging in all plots except control plot due to heavy rains at the time of ripening. (ii) Nil. (iii) Yield of grain. (iv) (a) 1956. (b) Yes. (c) Nil. (v) Nil. (vi) Heavy rains at the time of harvest. (vii) The expt. was conducted by Agronomist.

5. RESULTS :

Direct effect (*Kharif*)

(i) 3175 lb./ac. (ii) 111.0 lb./ac. (iii) N and P effects are highly significant. Interactions N×P and P×K are significant. Other effects are not significant. (iv) Av. yield of grain in lb./ac.

	N ₀	N ₁	N ₂	K ₀	K ₁	K ₂	F ₀	F ₁	Mean

nk = 20 lb./ac. of N as A/S + 20 lb./ac. of K₂O as Pot. Sul.

pk = 20 lb./ac. of P₂O₅ as Super + 20 lb./ac. of K₂O as Pot. Sul.

npk = 20 lb./ac. of N as A/S + 20 lb./ac. of P₂O₅ as Super + 20 lb./ac. of K₂O as Pot. Sul.

3. DESIGN :

(i) and (ii) The district has been divided into four agriculturally homogeneous zones and one field assistant posted in each zone. The field assistant conducts the trials in one Revenue circle or thana in the zone and the circle/thana is changed once in two years within the same zone. Each field assistant is required to conduct 31 trials in a year 8 on a kharif cereal, 8 on a rabi cereal, 8 on a cash crop, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of type A and the other half of type B on crops other than the legumes. The three trials on legumes are of type C. Residual effects of phosphate application are studied on type C trials in two out of the four zones in each district every year. The above experiments are laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village. (iii) (a) 1/40 ac. (b) 1/80 ac. (iv) Yes.

4. GENERAL :

Object :- Type B—To investigate the relative efficiency of different nitrogenous fertilizers applied at different doses.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) Red and black. (iii) Nil. (iv) Early Nov. 1959. (v) (a) 4 to 8 ploughings with *desi* plough. (b) Transplanting. (c) to (e) N.A. (vi) N.A. (vii) Irrigated. (viii) N.A. (ix) N.A. (x) Feb. 1960.

2. TREATMENTS :

- 0 = Control.
- n_1 = 20 lb./ac. of N as A/S.
- n_2 = 40 lb./ac. of N as A/S.
- n_1' = 20 lb./ac. of N as Urea.
- n_2' = 40 lb./ac. of N as Urea.
- n_1''' = 20 lb./ac. of N as C/A/N.
- n_2''' = 40 lb./ac. of N as C/A/N.

3. DESIGN :

(i) and (ii) The district has been divided into four agriculturally homogeneous zones and one field assistant posted in each zone. The field assistant conducts the trials in one Revenue circle or thana in the zone and the circle/thana is changed once in two years within the same zone. Each field assistant is required to conduct 31 trials in a year 8 on a *kharif* cereal, 8 on a *rabi* cereal, 8 on cash crop, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of type A and the other half of type B on crops other than the legumes. The three trials on legumes are of type C. Residual effects of phosphate application are studied on type C trials in two out of the four zones in each district every year. The above experiments are laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village. (iii) (a) and (b) N.A. (iv) Yes.

4. GENERAL :

(i) Normal. (ii) N.A. (iii) Grain yield. (iv) (a) 1959—contd. (b) and (c) No. (v) (a) and (b) As per design. (vi) and (vii) N.A.

5. RESULTS :

Treatment	0	n_1	n_2	n_1'	n_2'	n_1'''	n_2'''
Av. yield	2304	2921	3563	2946	2905	2962	3365

G.M.=2995 lb./ac.; S.E./mean = 187.9 lb./ac. and no. of trials = 8.

Crop :- Paddy (*Kharif and Rabi*).**Centre :- Salem (c.f.).****Ref :- M. 59(SFT).****Type :- 'M'.**

Object :—Type B—To investigate the relative efficiency of different nitrogenous fertilizers applied at different doses.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) Red. (iii) N.A. (iv) (a) *kharif* Sept., Oct., *Rabi* Nov-Dec. 1959. (v) (a) 4 to 7 ploughings. (b) Transplanting. (c) to (e) N.A. (vi) Different varieties in the centres. (vii) Irrigated. (viii) N.A. (ix) N.A. (x) *Kharif* Feb. 1960, and April 1960.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 59(SFT) Type B on page 95 conducted at Coimbatore.

5. RESULTS :

Kharif							
Treatment	0	n ₁	n ₂	n _{1'}	n _{2'}	n _{1'''}	n _{2'''}
Av. yield	2748	2872	2913	3094	2896	2995	3028
<i>G.M. = 2935 lb./ac. ; S.E./mean = 150.43 lb./ac. and no. of trials = 5.</i>							
Rabi							
Treatment	0	n ₁	n ₂	n _{1'}	n _{2'}	n _{1'''}	n _{2'''}
Av. yield	2979	3653	3555	3119	3374	3349	3670
<i>G.M. = 3386 lb./ac. ; S.E./mean = 101.7 lb./ac. and no. of trials = 4.</i>							

Crop :- Paddy (*Kharif*).**Ref :- M. 59(SFT).****Centre :- South Arcot (c.f.).****Type :- 'M'.**

Object :—Type B—To investigate the relative efficiency of different nitrogenous fertilizers applied at different doses.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) Red. (iii) N.A. (iv) Oct.-Nov. 1959. (v) (a) 4 to 6 ploughings. (b) Transplanting. (c) to (e) N.A. (vi) N.A. (vii) Irrigated. (viii) N.A. (ix) N.A. (x) Feb. 1960.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 59(SFT) Type B on page 95 conducted at Coimbatore.

5. RESULTS :

Treatment	0	n ₁	n ₂	n _{1'}	n _{2'}	n _{1'''}	n _{2'''}
Av. yield	2304	2839	3003	3127	3259	2518	2650
<i>G.M. = 2814 lb./ac. ; S.E./mean = 103.0 lb./ac. and no. of trials = 6.</i>							

Crop :- Paddy (*Kharif*).**Ref :- M. 59(SFT).****Centre :- Tanjore (c.f.).****Type :- 'M'.**

Object :—Type B—To investigate the relative efficiency of different nitrogenous fertilizers applied at different doses.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) Red. (iii) Nil. (iv) Oct.-Nov. 59. (v) (a) 4 to 7 ploughings and planking. (b) Transplanting. (c) to (e) N.A. (vi) Different varieties in each trial. (vii) Irrigated. (viii) 2 to 3 weedings. (ix) N.A. (x) Feb.-March '60.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 59(SFT) Type B on page 95 conducted at Coimbatore.

5. RESULTS :

Treatment	0	n ₁	n ₂	n _{1'}	n _{2'}	n _{1'''}	n _{2'''}
Av. yield	1605	1827	2065	1868	2189	1777	1991

Ref :- M. 59(SFT).

Centre :- Trichirapalli (c.f.).

Type :- 'M'.

Object :—Type B—To investigate the relative efficiency of different nitrogenous fertilizers applied at different doses.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) Red. (iii) N.A. (iv) Oct. 1959. (v) (a) 3 to 7 ploughings and plankings. (b) Transplanting. (c) to (e) N.A. (vi) Different variety in each trial. (vii) Irrigated. (viii) 2 to 3 weedings in some trials. (ix) N.A. (x) March 1960.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 59(SFT) Type B on page 95 conducted at Coimbatore.

5. RESULTS :

Treatment	0	n ₁	n ₂	n _{1'}	n _{2'}	n _{1'''}	n _{2'''}
Av. yield	2000	2082	2403	2131	2452	2098	2395

G.M. = 2223 lb./ac.; S.E./mean = 71.28 lb./ac. and no. of trials = 18.

Crop :- Paddy.

Ref :- M. 54 (76).

Site :- Agri. Res. Stn., Aduthurai.

Type :- 'M'.

Object :—To find out the suitable combination of A/S and Super for different varieties of Paddy.

1. BASAL CONDITIONS :

(i) (a) Paddy—Paddy. (b) Paddy. (c) As per treatments. (ii) (a) Alluvial clay. (b) Refer soil analysis, Aduthurai. (iii) 12.6.1954/4.7.1954. (iv) (a) *Mummatty* digging after wetting the plots. (b) Transplanting to get the required puddle. (c) 30 lb./ac. (d) 6"×6". (e) N.A. (v) Nil. (vi) As per treatments. (vii) Irrigated. (viii) 2 weedings. (ix) 13.03". (x) 27.9.1954.

2. TREATMENTS :

Main-plot treatments :

2 varieties : V_1 =Adt. 3 and V_2 =Adt. 20.

Sub-plot treatments :

All combinations of (1) and (2)

(1) 4 levels of N as A/S : $N_0=0$, $N_1=30$, $N_2=45$ and $N_3=60$ lb./ac.

(2) 4 levels of P_2O_5 as Super : $P_0=0$, $P_1=30$, $P_2=45$ and $P_3=60$ lb./ac.

Super applied as B.D. before transplanting and A/S top-dressed 3 weeks after transplanting.

3. DESIGN :

(i) Split-plot. (ii) (a) 2 main-plots/block ; 16 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) 22'×9'. (b) 21½'×8½'. (v) N.A. (vi) yes.

4. GENERAL :

(i) Crop lodged a fortnight before harvest. (ii) There was a mild attack of Fulgorids and jassids and controlled by dusting with BHC 10 %. (iii) Height measurement, tiller count and grain yield. (iv) (a) 1952—1957. (b) Yes. (c) Nil. (v) (a) and (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 2563 lb./ac. (ii) (a) 147.0 lb./ac. (b) 174.9 lb./ac. (iii) Main effects of V, N and P are highly significant. Interaction N×P is significant. Others are not significant. (iv) Av. yield of grain in lb./ac.

	N_0	N_1	N_2	N_3	Mean	P_0	P_1	P_2	P_3
V_1	2128	2482	2575	2602	2447	2299	2521	2425	2542

Object :—To study the relative response of two varieties of Paddy to different doses of N and P.

1. BASAL CONDITIONS :

(i) (a) Fallow—Paddy—Paddy. (b) Paddy. (c) As per treatments. (ii) (a) Clayey. (b) Refer soil analysis, Aduthurai. (iii) 1.9.1957/11, 12.11.1957. (iv) (a) Digging with *mummatty* and preparing plots. (b) Transplanting. (c) 30 lb./ac. (d) 6"×6". (e) 2. (v) 5000 lb./ac. of G.L. (vi) As per treatments. (vii) Irrigated. (viii) Weeding twice. (ix) 28.78". (x) 4.3.1958.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 55(42) on page 101.

5. RESULTS :

(i) 1665 lb./ac. (ii) (a) 742.4 lb./ac. (b) 379.5 lb./ac. (iii) Main effects of N and P are highly significant and effect of V is significant. (iv) Av. yield of grain in lb./ac.

	N ₀	N ₁	N ₂	N ₃	P ₀	P ₁	P ₂	P ₃	Mean
V ₁	1517	2088	1975	2240	1921	1900	1964	2034	1955
V ₂	1064	1435	1442	1553	1211	1201	1438	1645	1374
Mean	1290	1762	1709	1897	1566	1551	1701	1849	1665
P ₀	1152	1535	1660	1917					
P ₁	1299	1671	1527	1705					
P ₂	1249	1784	1797	1976					
P ₃	1462	2057	1851	1990					

S.E. of difference of two	
1. V marginal means	= 131.2 lb./ac.
2. N or P marginal means	= 94.9 lb./ac.
3. N or P means at the same level of V	= 134.2 lb./ac.
4. V means at the same level of N or P	= 175.3 lb./ac.
S.E. of body of N×P table	= 134.2 lb./ac.

Crop :- Paddy (Kuruvai).**Ref :- M. 58(103).****Site :- Agri. Res. Stn., Aduthurai.****Type :- 'MV'.**

Object :—To find out the relative response of different varieties of Paddy to application of N and K.

1. BASAL CONDITIONS :

- (i) (a) Paddy—Paddy—Fallow. (b) Fallow. (c) Nil. (ii) (a) Alluvial clay. (b) Refer soil analysis, Aduthurai. (iii) 27.6.1958/ 5 to 8.8.1958. (iv) (a) 4 ploughings. (b) Transplanting. (c) 30 lb./ac. (d) 10"×4". (e) 3. (v) 5000 lb./ac. of G.L.+150 lb./ac. of Super. (vi) As per treatments. (vii) Irrigated. (viii) Weeding twice. (ix) 18.55". (x) For V₁ and V₅ : 14.10.1958 ; for others : 2.11.1958.

2. TREATMENTS :**Strips in one direction :**6 varieties : V₁=Adt.. 3, V₂=Adt. 9, V₃=Adt. 16, V₄=Adt. 18, V₅=Adt. 20 and V₆=Adt. 23.**Strips in perpendicular direction :**

All combinations of (1) and (2)

- (1) 5 levels of N as A/S : N₀=0, N₁=15, N₂=30, N₃=45 and N₄=60 lb./ac.
 (2) 2 levels of K₂O as Pot. Sul. : K₀=0 and K₁=30 lb./ac.

3. DESIGN :

- (i) Strip-plot. (ii) (a) 60. (b) N.A. (iii) 4. (iv) (a) 15×15'. (b) 14'2"×14'8". (v) One row left as border. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Grain yield. (iv) (a) 1958—contd. (b) Yes. (c) Nil. (v) (a) Tirur, Palur, Coimbatore and Ambasamudram. (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

- (i) 2111 lb./ac. (ii) (a) 513.8 lb./ac. (b) 352.7 lb./ac. (c) 259.2 lb./ac. (iii) Main effect of V and interaction V×N are highly significant. (iv) Av. yield of grain in lb./ac.

	V ₁	V ₂	V ₃	V ₄	V ₅	V ₆	Mean	K ₀	K ₁
N ₀	2085	2069	2568	1808	2738	1638	2151	2106	2196

Crop :- Paddy.

Ref :- M. 54(95).

Site :- Paddy Breeding Stn., Coimbatore.

Type :- 'MV'.

Object :—To find out the response of different varieties of Paddy to varying doses of A/S and Super.

1. BASAL CONDITIONS :

- (i) (a) Nil. (b) Paddy. (c) As per treatments. (ii) (a) Clayey. (b) N.A. (iii) 13.9.1954/1.2.11.1954. (iv) (a) 3 ploughings. (b) Transplanting. (c) 30 lb./ac. (d) 6"×6". (e) N.A. (v) 5000 lb./ac. of *Sesbania* as G.L. (vi) As per treatments. (vii) Irrigated. (viii) 1 weeding. (ix) 11.62". (x) 14, 24.2.1955.

2. TREATMENTS :

Main-plot treatments :

(i) 2 varieties : V₁=CO-2 and V₂=GEB-24.

Sub-plot treatments :

All combinations of (1) and (2)

(1) 4 levels of N as A/S : N₀=0, N₁=30, N₂=45 and N₃=60 lb./ac.(2) 4 levels of P₂O₅ as Super : P₀=0, P₁=30, P₂=45 and P₃=60 lb./ac.

3. DESIGN :

(i) Split-plot. (ii) (a) 2 main-plots/block ; 16 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) 12'×11'. (b) 11½'×10½'. (v) 1 row left as border. (vi) Yes.

4. GENERAL :

(i) Normal. (ii) Nil. (iii) Height measurement, tiller count and yield of grain. (iv) (a) 1953—contd. (b) Yes. (c) N.A. (v) (a) Aduthurai. (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

(i) 2231 lb./ac. (ii) (a) 793.7 lb./ac. (b) 222.5 lb./ac. (iii) Main effects of N and P and interaction N×V are highly significant. Interaction P×V is significant. (iv) Av. yield of grain in lb./ac.

	N ₀	N ₁	N ₂	N ₃	Mean	P ₀	P ₁	P ₂	P ₃
V ₁	2257	2586	2485	2149	2369	2244	2417	2456	2361

Object :—Type VIII—To study the response of different varieties of Paddy to N and P.

1. BASAL CONDITIONS :

(i) (a) Paddy—Paddy. (b) Paddy. (c) 3000 lb./ac. of G.L. (ii) (a) Clayey loam. (b) N.A. (iii) 19.6.1954
15.7.1954. (iv) (a) 4 ploughings. (b) Transplanting. (c) 50 lb./ac. (d) 4"×4". (e) 2. (v) 3000 lb./ac.
of G.L. (vi) As per treatments. (vii) Irrigated. (viii) 2 weedings. (ix) 27.00". (x) 30.9.1954.

2. TREATMENTS :

All combinations of (1), (2) and (3).

- (1) 3 levels of N as A/S : $N_0=0$, $N_1=20$ and $N_2=40$ lb./ac.
- (2) 3 levels of P_2O_5 as Triple Super : $P_0=0$, $P_1=20$ and $P_2=40$ lb./ac.
- (3) 3 varieties : $V_1=\text{Adt. } 3$, $V_2=\text{Adt. } 4$ and $V_3=\text{Adt. } 20$.

3. DESIGN :

(i) 3³ confd. (ii) (a) 9 plots/block ; 3 blocks/replication. (b) N.A. (iii) 1. (iv) (a) 36'×18'. (b) 34'×16'.
(v) 2'×2'. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Grain yield and other biometric observations. (iv) (a) 1954—contd. (b) No.
(c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 357.0 lb./ac. (ii) 121.0 lb./ac. (iii) Main effect of N, P and V and interactions N×V and P×V are significant. Interaction N×P is not significant. (iv) Av. yield of grain in lb./ac.

	N_0	N_1	N_2	Mean	V_1	V_2	V_3
P_0	3550	3456	3376	3461	3443	3430	3510
P_1	3683	3597	3517	3599	3683	3443	3671
P_2	3797	3490	3663	3650	3350	3670	3930
Mean	3677	3514	3519	3570	3492	3514	3703
V_1	3496	3563	3417				
V_2	3570	3496	3477				
V_3	3964	3483	3663				

S.E. of any marginal mean = 40.3 lb./ac.

S.E. of body of any table = 70.0 lb./ac.

Crop :- Paddy.**Ref :- M. 55(TCM).****Site :- M.A.E. Farm, Aduthurai.****Type :- 'MV'.**

Object :—Type VIII—To study the response of different varieties of Paddy to N and P.

1. BASAL CONDITIONS :

(i) Paddy—Paddy. (b) Paddy. (c) 3000 lb./ac. of G.L. (ii) (a) Clayey loam. (b) N.A. (iii) 22.6.1955/
20.7.1955. (iv) (a) 4 ploughings. (b) Transplanting. (c) 50 lb./ac. (d) 4"×4". (e) 2. (v) 5000 lb./ac. of
G.L. (vi) As per treatments. (vii) Irrigated. (viii) 2 weedings. (ix) 19.68". (x) 28.9.1955 and
3.10.1955.

2. TREATMENTS :

Same as in expt. no. 54(TCM) Type VIII above.

3. DESIGN :

(i) 3³ confd. (ii) (a) 9 plots/blocks ; 3 blocks/replication. (b) N.A. (iii) 1. (iv) (a) 29'×15'. (b) 27'×13'.
(v) 2'×2'. (vi) Yes.

4. GENERAL :

Same as in expt. no. 54(TCM) on page 129.

5. RESULTS :

(i) 2853 lb./ac. (ii) 150.6 lb./ac. (iii) Main effects of N, P and V are significant and others are not significant. (iv) Av. yield of grain in lb./ac.

	N ₀	N ₁	N ₂	Mean	V ₁	V ₂	V ₃
P ₀	2422	2753	2885	2687	2631	2634	2795
P ₁	2789	2882	3038	2903	2929	2701	3079
P ₂	2836	2909	3160	2968	2846	2929	3128
Mean	2682	2848	3028	2853	2802	2755	3001
V ₁	2645	2746	3017				
V ₂	2634	2753	2878				
V ₃	2769	3046	3188				

S.E. of any marginal mean = 50.2 lb./ac.
S.E. of body of any table = 86.9 lb./ac.

Crop :- Paddy (*Samba*).

Ref :- M. 56(37).

Site :- Agri. Res. Stn., Aduthurai.

Type :- 'C'.

Object :—To compare the wave shaped method of rice cultivation with the Japanese and farm methods.

1. BASAL CONDITIONS :

(i) (a) Fallow—Paddy. (b) Fallow. (c) Nil. (ii) (a) Clayey. (b) Refer soil analysis, Aduthurai. (iii) 10.8.1956/29.9.1956. (iv) (a) 4 ploughings. (b) As per treatments. (c) 30 lb./ac. (d) As per treatments. (e) N.A. (v) 5000 lb./ac. of G.L.+150 lb./ac. of A/S+150 lb./ac. of Super. (vi) Adt. 1 (late). (vii) Irrigated. (viii) 2 weedings, 4 intercultivations and earthing up. (ix) 29.24°. (x) 28.1.1957.

2. TREATMENTS :

6 methods of planting : M₁=Farm method ; M₂=Local method ; M₃=Wave-shape method of planting with 1'6"×4" spacing, M₄=Wave-shape method of planting with 2"-6"×2½" spacing, M₅=Wave-shape method of planting with 10"×5" spacing, and M₆=Japanese method of planting with 10"×5" spacing,

3. DESIGN :

(i) R.B.D. (ii) (a) 6. (b) N.A. (iii) 8. (iv) (a) 40'×7½'. (b) 39'6"×7', 39'8"×6', 39'9½"×5' and 39'7"×6'8" for treatments M₁, M₂, M₃, M₄, M₅ and M₆ respectively. (v) One row left. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Yield of grain. (iv) (a) 1956—1958. (b) No. (c) Nil. (v) (a) Coimbatore and Ambasamudram. (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 3810 lb./ac. (ii) 279.4 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	M ₁	M ₂	M ₃	M ₄	M ₅	M ₆
Av. yield	3694	3659	3954	3667	3668	3917
S.E./mean	= 98.8 lb./ac.					

Crop :- Paddy (*Samba*).

Ref :- M. 57(30).

Site :- Agri. Res. Stn., Aduthurai.

Type :- 'C'.

Object :—To compare the wave-shape method of rice cultivation with the Japanese and farm method.

1. BASAL CONDITIONS :

(i) (a) Fallow—Paddy. (b) Fallow. (c) Nil. (ii) (a) Clayey. (b) Refer soil analysis, Aduthurai. (iii) 10.8.1957/21.9.1957. (iv) (a) 4 ploughings. (b) As per treatments. (c) 30 lb./ac. (d) As per treatments. (e) —. (v) G.L. at 5000 lb./ac.+150 lb./ac. of Super as basal dressing+150 lb./ac. of A/S as top-dressing one month after planting. (vi) Adt.1 (late). (vii) Irrigated. (viii) 2 weedings. (ix) 28.78". (x) 2.2.1958.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 56(37) on page 130.

5. RESULTS :

(i) 1781 lb./ac. (ii) 261.9 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	M ₁	M ₂	M ₃	M ₄	M ₅	M ₆
Av. yield	1836	1714	1867	2067	1646	1558
S.E./mean = 92.6 lb./ac.						

Crop :- Paddy (*Kuruvalai*).

Ref :- M. 58(89).

Site :- Agri. Res. Stn., Aduthurai.

Type :- 'C'.

Object :—To compare the wave shaped method of rice cultivation with the Japanese and farm methods.

1. BASAL CONDITIONS :

(i) (a) Paddy—Paddy. (c) Paddy. (c) 5000 lb./ac. of G.L.+150 lb./ac. of A/S+150 lb./ac. of Super. (ii) (a) Alluvial clay. (b) Refer soil analysis, Aduthurai. (iii) 14.7.1958/11.8.1958. (iv) (a) 3 to 4 ploughings. (b) As per treatments. (c) 30 lb./ac. (d) As per treatments. (e) N.A. (v) 5000 lb./ac. of G.L.+150 lb./ac. of A/S+150 lb./ac. of Super. (vi) Adt. 3. (early). (vii) Irrigated. (viii) One weeding. (ix) 20.25". (x) 23.10.1958.

2. TREATMENTS to 4. GENERAL.

Same as in expt. no. 56(37) on page 130.

5. RESULTS :

(i) 1618 lb./ac. (ii) 149.1 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of grain in lb./ac.

Treatment	M ₁	M ₂	M ₃	M ₄	M ₅	M ₆
Av. yield	1524	1539	1853	1308	1759	1725
S.E./mean = 52.71 lb./ac.						

Crop :- Paddy (*Samba*).

Ref :- M. 58(90).

Site :- Agri. Res. Stn., Aduthurai.

Type :- 'C'.

Object :—To compare the wave-shape method of rice cultivation with the Japanese and farm methods.

1. BASAL CONDITIONS :

(i) (a) Paddy—Paddy. (b) Paddy. (c) 5000 lb./ac. of G.L.+150 lb./ac. of A/S+150 lb./ac. of Super. (ii) (a) Alluvial clay. (b) Refer soil analysis, Aduthurai. (iii) 26.7.1958/6.9.1958. Av. yield	2316	2328	1942	1261	2149	2267
S.E./mean = 162.4 lb./ac.						

Crop :- Paddy (*Navarai*).**Ref :- M. 59(94).****Site :- Agri. Res. Stn., Palur.****Type :- 'C'.**

Object :—To find the effect of different methods of Paddy cultivation.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) 5000 lb./ac. of G.L.+150 lb./ac. of Super+150 lb./ac. of A/S. (ii) (a) Clayey loam. (b) Refer soil analysis, Palur. (iii) 10.1.1959/31.1.1959. (iv) (a) 4 ploughings. (b) As per treatments. (c) 30 lb./ac. (d) and (e) As per treatments. (v) As under (i) (c) above. (vi) CO—2 (medium). (vii) Irrigated. (viii) 2 weedings. (ix) 7.8". (x) 29.4.1959.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 58(124) on page 141.

5. RESULTS :

(i) 2360 lb./ac. (ii) 249.1 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of grain in lb./ac.

Treatment	M ₁	M ₂	M ₃	M ₄	M ₅	M ₆
Av. yield	2766	2523	2342	1338	2481	2708
S.E./mean = 88.1 lb./ac.						

Crop :- Paddy.**Ref :- M. 57(20).****Site :- Agri. Res. Stn., Pattukkottai.****Type :- 'C'.**

Object :—To test the efficacy of the wave method of Paddy cultivation.

1. BASAL CONDITIONS :

- (i) (a) Paddy—Paddy—Fallow. (b) Paddy. (c) G.L. at 5000 lb./ac.+Super at 100 lb./ac.+A/S at 100 lb./ac.
 (ii) (a) Sandy loam. (b) N.A. (iii) 27.6.1957/20, 21.7.1957. (iv) (a) 4 to 6 ploughings. (b) As per treatments. (c) 30 lb./ac. (d) As per treatments. (e) 2 seedlings/hole. (v) As under (i) (c) above. (vi) Adt. 20 (early). (vii) Irrigated. (viii) As per treatments. (ix) 5.01" (x) 13.10.1957.

2. TREATMENTS :

6 Methods of planting : M_1 =Modified Japanese (farm) method, M_2 =Local ryot's method, M_3 =Wave method with $18'' \times 4''$ spacing, M_4 =Wave method with $30'' \times 2\frac{1}{2}''$ spacing, M_5 =Wave method with $10'' \times 5''$ spacing and M_6 =Japanese method with $10'' \times 5''$ spacing.

Plots with wave method received two surface scrapings, one ridging after working with intercultivator. Plots with Japanese method received two interculture operations with the intercultivator.

3. DESIGN :

- (i) R.B.D. (ii) (a) 6. (b) $36' \times 45'$. (iii) 4. (iv) (a) and (b) $36'' \times 7'6''$. (v) Nil. (vi) Yes.

4. GENERAL :

- (i) Good. (ii) Nil. (iii) Grain yield. (iv) (a) 1956—1958. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

- (i) 2348 lb./ac. (ii) 240 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	M_1	M_2	M_3	M_4	M_5	M_6
Av. yield	2485	2243	2439	1888	2509	2519
S.E./mean = 120 lb./ac.						

Crop :- Paddy (*Kuruvalai*).

S.E. of M marginal mean = 67.9 lb./ac.

S.E. of C marginal mean = 107.4 lb./ac.

S.E. of body of table = 151.9 lb./ac.

Crop :- Paddy (1st crop).

Ref :- M. 54(73).

Site :- Agri. Res. Stn., Aduthurai.

Type :- 'CMV'.

Object :- To compare the merits of Japanese method as practised in 'Kora Gramodyog Kendra,' Bombay, with that of farm method of Paddy cultivation.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) 5000 lb./ac. of G.L.+150 lb./ac. of Super applied at planting+A/S at 150 lb./ac. top-dressed. (ii) (a) Alluvial clay. (b) Refer soil analysis, Aduthurai. (iii) 22.6.1954/26.7.1954. (iv) (a) Ploughed thrice with mould board plough and levelled with Burmese settun once. (b) Transplanting. (c) 25 lb./ac. (d) 6"×6". (e) N.A. (v) As per treatments. (vi) As per treatments. (vii) Irrigated. (viii) As per treatments. (ix) 13.03". (x) 17.10.1954.

2. TREATMENTS :

Main-plot treatments :

2 varieties : V₁=Adt. 3 and V₂=Adt. 20 (early).

Sub-plot treatments :

2 methods of planting : C₁=Japanese and C₂=Farm methods.

Japanese method : Seed beds manured with F.Y.M. at 40 C.L./ac., ash at 2000 lb./ac. and sieved compost at 2000 lb./ac. A mixture of A/S and Super in 1 : 1 ratio applied at 2 lb. per 1 lb. of

seed at sowing. A second dose of A/S and Super mixture, equal to the first dose, applied 10 and 20 days after sowing to the short and long duration varieties respectively. Transplant fields were given a B.D. of F.Y.M. at 20 C.L./ac. 30 lb./ac. as of A/S and 30 lb. of P₂O₅ as Super were applied and plots were dug and levelled. A second dose of phosphate was applied 15 days after planting and another similar dose given 15 days after the second dose to the 1st crop. The chemical manures applied at intervals of one month in the case of *Samba* and *Thaladi* crops. The plots intercultivated with a Japanese rotary weeder once in fifteen days till two weeks before flowering of the crop.

Farm method : The nurseries were manured with 20 C.L./ac. of F.Y.M. during I crop and 10,000 lb./ac. of G.L. during II crop and single crop seasons. The transplanted fields received a B.D. of 5,000 lb. G.L. and 30 lb. P₂O₅ as Super and the manure dug in. 30 lb. of N as A/S applied 30 days after planting in the I crop and 40 days after planting in II crop and single crop seasons.

3. DESIGN :

(i) Split-plot. (ii) (a) 2 main-plots/block ; 2 sub-plots/main-plot. (b) N.A. (iii) 8. (iv) (a) and (b) 22'×20'. (v) Nil. (vi) Yes.

4. GENERAL:

(i) Crop lodged just a fortnight before harvest. (ii) N.I. (iii) Height measurement, tiller counts and grain yield. (iv) (a) 1953—contd. (b) No. (c) N.A. (v) (a) and (b) N.A. (vi) and (vii) Nil.

Crop :- Paddy (*Samba*).**Ref :- M. 54(63).****Site :- Agri. Res. Stn., Palur.****Type :- 'CMV'.**

Object :—To compare the merits of Japanese method as practised in 'Kora Gramodyog Kendra', Bombay, with that of farm method of Paddy cultivation.

1. BASAL CONDITIONS :

- (i) (a) Paddy—Paddy. (b) G.M. crop. (c) Nil. (ii) (a) Clayey loam. (b) Refer soil analysis, Palur. (iii) 24.8.1954/2, 3.11.1954. (iv) (a) 4 ploughings. (b) Transplanting. (c) 30 lb./ac. (d) As per treatments. (e) N.A. (v) and (vi) As per treatments. (vii) Irrigated. (viii) As per treatments. (ix) 32.33°. (x) 22.2.1955.

2. TREATMENTS :

Main-plot treatments :

2 varieties : $V_1=CO-25$ and $V_2=CO-19$.

Sub-plot treatments :

2 methods of cultivation : C_1 =Japanese and C_2 =Farm methods.

Japanese method :

Nursery : 10,000 lb./ac. of G.L.+20 C.L. of C.M. Heavier seed selected by immersion in salt solution.

Field : 5000 lb./ac of G.L.+150 lb./ac. of Super+150 lb./ac of A/S (as top-dressing after 45 days of planting) and 10"×10" spacing. Intercultivation by rotary weeder at 15 days interval from planting upto one month prior to flowering.

Farm method :

Nursery : 10,000 lb./ac. of G.L.

Field : 5000 lb./ac. of G.L., 150 lb./ac. of Super, 150 lb./ac. of A/S, top-dressing one month prior to flowering at 6"×6" spacing.

3. DESIGN :

- (i) Split-plot. (ii) (a) 2 main-plots/block ; 2 sub-plots/main-plot. (b) 30'×60'. (iii) 8. (iv) (a) Main-plot : 30'×30'; sub-plot : 30'×15'. (b) Sub-plot : C_1 : 28'4"×13'4" and C_2 : 29'×14'. (v) N.A. (iv) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Grain yield. (iv) (a) 1954—1957. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

- (i) 2596 lb./ac. (ii) (a) 543.5 lb./ac. (b) 510.8 lb./ac. (iii) C effect alone is highly significant. (iv) Av. yield of grain in lb./ac.

	V_1	V_2	Mean
C_1	3096	2838	2967
C_2	2342	2106	2224
Mean	2719	2472	2596

Crop :- Paddy.**Ref :- M. 54(51).****Site :- Agri. Res. Stn., Aduthurai.****Type :- 'D'.**

Object :—To study the effect of different fungicides on blast disease of Paddy.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) G.L. at 5000 lb./ac. + Super at 150 lb./ac. + A/S at 500 lb./ac. (ii) (a) Clayey loam. (b) Refer soil analysis, Aduthurai. (iii) 30.9.1954/11.11.1954. (iv) (a) 2 ploughings after watering the field. G.M. applied, trampled and allowed to decompose, ploughed again and levelled prior to transplanting. (b) Transplanting. (c) to (e) N.A. (v) 500 lb./ac. of G.M.+150 lb./ac. of Super just before planting. Top-dressing with A/S—quantity N.A. (vi) Adt. 10. (vii) Irrigated. (viii) One weeding a month after transplanting. (ix) 27.33". (x) 6, 7.3.1955.

2. TREATMENTS :

4 fungicides : F_0 = No, F_1 = Bordeaux's mixture, F_2 = Perenox and F_3 = Cupravit. Spraying in 2 doses, 1st 15 days after planting and the other 15 days later.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 6. (iv) (a) and (b) 8' \times 14'. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Blast attack—As per treatments. (iii) Grain yield and % of blast infected tillers in each plot. (iv) (a) No. (b) and (c) Nil. (v) (a) and (b) Nil. (vi) Nil. (vii) The data is transformed into $\sin^{-1}\sqrt{p}$ where p is the % of infection and then analysed.

5. RESULTS :

I % infection of blast

(i) 26.74 degrees. (ii) 4.05 degrees. (iii) Treatment differences are not significant. (iv) Mean angle in degrees.

Treatment	F_0	F_1	F_2	F_3
Mean angle	30.56	24.59	26.26	25.55

S.E./mean = 1.65 degrees.

II. Grain yield

(i) 2637 lb./ac. (ii) 506.3 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	F_0	F_1	F_2	F_3
Av. yield	2334	2761	2411	3034
S.E./mean = 206.7 lb./ac.				

Crop :- Paddy.**Ref :- M. 54(52)****Site :- Agri. college and Res. Instt., Coimbatore.****Type :- 'D'.**

Object :—To study the effect of different fungicides in controlling blast disease of Paddy.

1. BASAL CONDITIONS :

(i) (a) Paddy—Fallow—Paddy. (b) Paddy. (c) 5000 lb./ac. of G.L. and 120 lb./ac. of N. as A/S. (ii) (a) Clayey. (b) Refer soil analysis, Coimbatore. (iii) 13.9.1954/14.10.1954. (iv) (a) 2 ploughings after letting water into the field. G.M. applied, trampled, allowed to decompose for a week and ploughed in. Levelling was done prior to transplantation. (b) Transplanting. (c) to (e) N.A. (v) 5000 lb./ac. of G.L. spread uniformly and trampled. (vi) CO—13 (early). (vii) Irrigated. (viii) Two weedings. (ix) 13.06". (x) 12.1.1955.

2. TREATMENTS :

9 fungicides : F_0 = No spraying, F_1 = Bordeaux's mixture 1% + 8 oz. of Albolinium in 100 gallons of water. F_2 = Cupravit, F_3 = Coppersan, F_4 = Fungi-copper (Geigy), F_5 = Shell copper fungicide, F_6 = Fungimar, F_7 = Trifungal and F_8 = Perenox.

The concentration of Tr. F_2 to F_8 is 1 lb. in 40 gallons of water. Two sprays given—1st 15 days after planting and second 30 days after planting.

3. DESIGN :

(i) R.B.D. (ii) (a) 9. (b) N.A. (iii) 4. (iv) (a) and (b) 23' \times 18'. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Blast attack—Control measures as per treatments. (iii) Leaf and neck infestations were recorded. Infection count and grain yield. (iv) (a) 1943—contd. (but with varying treatments). (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) The data is transformed into $\sin^{-1}\sqrt{p}$ where p is the % neck infection and then analysed. (vii) Expt. was conducted by the Mycologist, Coimbatore.

5. RESULTS :**I. % infection of blast**

(i) 29.57 degrees. (ii) 4.50 degrees. (iii) Treatment differences are not significant. (iv) Mean angle in degrees.

Treatment	F ₀	F ₁	F ₂	F ₃	F ₄	F ₅	F ₆	F ₇	F ₈
Mean angle	30.68	32.54	27.77	27.62	29.28	29.42	28.66	30.14	30.04

S.E./mean = 2.25 degrees.

II. Grain yield

(i) 580.2 lb./ac. (ii) 159.4 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	F ₀	F ₁	F ₂	F ₃	F ₄	F ₅	F ₆	F ₇	F ₈
Av. yield	526.1	605.0	683.9	552.4	671.3	499.8	473.5	736.5	473.5

S.E./mean = 79.7 lb./ac.

Crop :- Paddy.

Ref :- M. 54(53).

Site :- Agri. College and Res. Instt., Coimbatore.

Type :- 'D'.

Object :—To study the effect of different fungicides in controlling blast disease.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) 5000 lb./ac. of G.L. (ii) (a) Clayey. (b) Refer soil analysis, Coimbatore. (iii) 6.11.1954/N.A. (iv) (a) 2 ploughings and levelling after G.L. was applied. (b) to (e) N.A. (v) 5000 lb./ac. of G.L. (vi) CO—13 (early). (vii) Irrigated. (viii) Nil. (ix) 4.03". (x) 6.1.1955.

2. TREATMENTS :

Same as in expt. no. 54(52) on page 195.

3. DESIGN :

(i) R.B.D. (ii) (a) 9. (b) N.A. (iii) 4. (iv) (a) and (b) 5'×10'. (v) No. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Sprayed against thrips. (iii) Leaf infection was recorded. (iv) (a) 1943—contd. (but with different treatments year to year) (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) The data is transformed into $\sin^{-1}\sqrt{p}$ where p is the % infection and then analysed. (vii) Expt. was conducted by the Mycologist.

5. RESULTS :

(i) 29.51 degrees. (ii) 5.46 degrees. (iii) Treatment differences are not significant. (iv) Mean angle in degrees.

Treatment	F ₀	F ₁	F ₂	F ₃	F ₄	F ₅	F ₆	F ₇	F ₈
Mean angle	31.54	30.12	29.09	29.47	25.52	31.50	31.10	30.98	26.28

S.E./mean = 2.73 degrees.

Crop :- Paddy.

Ref :- M. 54(50).

Site :- Agri. College and Res. Instt., Coimbatore.

Type :- 'D'.

Object :—To study the effect of treating seed with fungicides on the foot-rot disease of Paddy.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) 5000 lb./ac. of G.L. (ii) (a) Clayey. (b) Refer soil analysis, Coimbatore. (iii) 6.11.1954. (iv) (a) Ploughing and levelling. (b) Transplanting. (c) to (e) N.A. (v) G.L. given—quantity N.A. (vi) CO—10. (vii) Irrigated. (viii) Nil. (ix) 3.05". (x) 20.12.1954.

2. TREATMENTS :

6 fungicides : F_0 =No treatment, F_1 =Agrosan G.N., F_2 =Ceresan, F_3 =Harvesan; F_4 =Tripomol 50 and F_5 =Tripomol 80.

Quantity of fungicides—1 gm. per pound of seed.

3. DESIGN :

(i) R.B.D. (ii) (a) 6. (b) N.A. (iii) 4. (iv) (a) and (b) $2' \times 2'$. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Foot-rot disease—control manures as per treatments. (iii) Observation recorded on percentage of infected seedlings. (iv) (a) 1943—contd. (but with different treatments every year). (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) The data is transformed into $\sin^{-1}\sqrt{p}$ where p is the % infection and then analysed. (vii) Expt: was conducted by Mycologist.

5. RESULTS :

(i) 28.48 degrees. (ii) 3.56 degrees. (iii) Treatment differences are highly significant. (iv) Mean angle in degrees.

Treatment	F_0	F_1	F_2	F_3	F_4	F_5
Mean angle	79.10	3.01	8.88	6.57	33.16	40.18

S.E./mean = 1.78 degrees.

Crop :- Paddy.

Ref :- M. 54(28).

Site :- Agri. College and Res. Instt., Coimbatore.

Type :- 'D'.

Object :— To study the effect of periodical application of insecticides on Paddy stem-borer.

1. BASAL CONDITIONS :

(i) (a) No. (b) Paddy. (c) 10,000 lb./ac. [of G.L.+150 lb./ac. of Super+150 lb./ac. of A/S as top-dressing. (ii) (a) Clayey. (b) Refer soil analysis, Coimbatore. (iii) 27.8.1954/19.10.1954. (iv) (a) Puddling with Victory plough followed by country plough and levelling. (b) Transplanting. (c) to (e) N.A. (v) 10,000 lb./ac. of G.L.+150 lb./ac. of Super+150 lb./ac. of A/S as top-dressing. (vi) PTB.21. (medium) (vii) Irrigated. (viii) 4 weedings. (ix) N.A. (x) 17.1.1955.

2. TREATMENTS :

5 insecticides : I_0 =No spray, I_1 =B.H.C. 0.1%, I_2 =Folidol (0.025%), I_3 =Endrine 0.01% (1 oz. in 12½ gallons of water) and I_4 =Product 1250.

Four sprayings done—1st at nursery stage (42 days old), 2nd and 3rd after 15 and 30 days of transplanting and 4th at shoot-blade stage.

3. DESIGN :

(i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 6. (iv) (a) and (b) $100' \times 22'$. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Good ; lodging was noted on 10.1.1955. (ii) As per treatments. (iii) Percentage of stem-borer infection and grain yield. (iv) (a) 1952—contd. (b) No. (c) Nil. (v) (a) Aduthurai. (b) N.A. (vi) Nil. (vii) Expt. was conducted by the Entomologist, Coimbatore.

5. RESULTS :

(i) 2768 lb./ac. (ii) 121.8 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	I_0	I_1	I_2	I_3	I_4
Av. yield	2280	2343	2330	2267	2317

S.E./mean = 49.7 lb./ac.

Crop :- Paddy.

Ref :- M. 54(92).

Site :- Paddy Breeding Stn., Coimbatore.

Type :- 'D'.

Object :—To study the effect of Ceresan on Paddy yield.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) 5000 lb./ac. of G.L.+150 lb./ac. of Super as B.D.+150 lb./ac. of A/S top-dressed one month after planting. (ii) (a) Clayey. (b) N.A. (iii) 16.7.1954/17.8.1954. (iv) (a) 3 ploughings. (b) Transplanting. (c) 30 lb./ac. (d) 4"×6". (e) N.A. (v) 5000 lb./ac. of *Sesbania* G.L.+150 lb./ac. of Super as B.D. (vi) CO—13 (early). (vii) Irrigated. (viii) Weeding a month after planting. (ix) 10.9" (x) 17.11.1954.

2. TREATMENTS :

1. Control.
2. Each pound of seed treated by 4 lb./ac. of Ceresan.
3. Each pound of seed treated by 5 lb./ac. of Ceresan.

3. DESIGN :

- (i) R.B.D. (ii) (a) 3. (b) N.A. (iii) 8. (iv) (a) and (b) 4'×20'. (v) Nil. (vi) Yes.

4. GENERAL :

- (i) Normal. (ii) Nil. (iii) Height measurement, tiller count and grain yield. (iv) (a) 1953—contd. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

(i) 2783 lb./ac. (ii) 1959 lb./ac. (iii) Treatment differences are [not significant. (iv) Av. yield of grain in lb./ac.

Treatment	1	2	3
Av. yield	2813	2762	2776
S.E./mean = 692.6 lb./ac.			

Crop :- Jowar.**Ref :- M. 54(113).****Site :- Millet Breeding Stn., Coimbatore.****Type :- 'M'.**

Object :—To find out the optimum dose of fertilizers for Jowar.

1. BASAL CONDITIONS :

(i) *Jowar*—Cotton—*Jowar*. (b) Pulses—Cowpea. (c) 5 tons/ac. of F.Y.M. (ii) (a) Red soil. (b) Refer soil analysis, Coimbatore. (iii) 6.8.1954. (iv) (a) 4 ploughings. (b) Line sowing. (c) 15 lb./ac. (d) 1.32'×1.32'. (e) 2. (v) 5 tons/ac. of F.Y.M. given as B.D. before the last ploughing. (vi) CO—1 (late) (vii) Irrigated. (viii) 2 weedings, hoeings and thinning. (ix) 14.6". (x) 26.12.1954.

2. TREATMENTS :

4 doses of manure : M_0 =No manure, $M_1=5$ tons/ac. of F.Y.M., $M_2=5$ tons/ac. of F.Y.M.+20 lb./ac. of N+20 lb./ac. of P_2O_5 and $M_3=5$ tons/ac. of F.Y.M.+40 lb./ac. of N+20 lb./ac. of P_2O_5 .

N as A/S and P_2O_5 as Super. F.Y.M. and Super applied as B.D. before sowing. A/S applied in rows by hoeing at thinning time one month after sowing.

3. DESIGN :

- (i) R.B.D. (ii) (a) 4. (b) 32'×66'. (iii) 6. (iv) (a) 33'×66'. (b) 26.4'×59.4'. (v) 3.3'×3.3'. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Grain and straw yield. (iv) (a) 1954—contd. (b) Yes. (c) N.A. (v) (a) Tirupathur. (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

- (i) 1390 lb./ac. (ii) 150.6 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	M_0	M_1	M_2	M_3
Av. yield.	1303	1347	1501	1407
S.E./mean = 61.5 lb./ac.

Crop :- Jowar (*Kharif*).**Ref :- M. 57(MAE).****Site :- M.A.E. Farm, Bhavanisagar.****Type :- 'M'.**

Object :—Type VI—To determine the method of placement of phosphatic fertilizers to Jowar.

1. BASAL CONDITIONS :

(i) (a) N A. (b) Horse gram. (c) Nil. (ii) (a) and (b) N.A. (iii) 11, 12.10.1957. (iv) (a) 3 ploughings. (b) Dibbling. (c) 12 lb./ac. (d) 18"×6". (e) 1. (v) 15 lb./ac. of N as A/S before sowing and 15 lb./ac. of N as A/S 60 days after sowing. (vi) CO—1 (5½ months duration). (vii) Irrigated. (viii) Hoeing and 2 weedings. (ix) 21.9". (x) 24, 25.2.1958.

2. TREATMENTS :

All combinations of (1), (2) and (3) + a control (no manure)

(1) 2 levels of P_2O_5 : $P_1=20$ and $P_2=40$ lb./ac.

(2) 3 sources of P_2O_5 : S_1 =Super, S_2 =Ammo. Phos. and S_3 =Dical. Phos.

(3) 3 methods of placement of P_2O_5 : M_1 =Broadcast before final combination, M_2 =Placed 2 $\frac{1}{2}$ " below seed and M_3 =Band placement.

3. DESIGN :

(i) R.B.D. (ii) (a) 19. (b) N.A. (iii) 3. (iv) (a) 36.3'×15". (b) 34.3'×13'. (v) 1'×1'. (vi) Yes.

4. GENERAL :

(i) N.A. (ii) Slight attack of ear-head-bug. (iii) Grain yield. (iv) (a) 1957—contd. (b) No. (c) Nil. (v) No. (vi) Nil. (vii) Continuous rains during the early part of the crop resulted in stunted growth of the crop.

5. RESULTS :

(i) 69.9 lb./ac. (ii) 19.90 lb./ac. (iii) None of the effect is significant. (iv) Av. yield of grain in lb./ac.

Control = 75.3 lb./ac.

	S_1	S_2	S_3	Mean	P_1	P_2
M_1	60.2	75.8	74.8	70.3	70.7	69.9
M_2	50.2	83.4	62.1	65.2	56.6	73.8
M_3	74.8	64.9	79.9	73.2	69.5	76.9
Mean	61.7	74.7	72.3	69.6	65.6	73.5
P_1	64.6	64.4	67.8			
P_2	58.9	85.0	76.7			

S.E. of marginal mean of M or S = 4.69 lb./ac.

S.E. of marginal mean of P = 3.83 lb./ac.

S.E. of body of $M \times S$ table = 8.12 lb./ac.

S.E. of body of $M \times P$ or $M \times S$ table = 6.63 lb./ac.

S.E. of control mean = 11.49 lb./ac.

Crop :- Jowar (*Kharif*).

Ref :- M. 58(MAE).

Site :- M.A.E. Farm, Bhavanisagar.

Type :- 'M'.

Object :- Type VI—To determine the method of placement of phosphatic fertilizers to Jowar.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Groundnut. (c) N.A. (ii) (a) and (b) N.A. (iii) 6, 7.11.1958. (iv) (a) 2 ploughings. (b) Dibbling. (c) 35 lb./ac. (d) 12"×6". (e) N.A. (v) Nil. (vi) CO—1. (vii) Irrigated. (viii) 3 weedings. (ix) N.A. (x) 4 to 10.3.1959.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 57(MAE) Type VI on page 202.

4. GENERAL :

(i) Due to alkalinity the growth of the crop is affected in patches. (ii) A slight attack of *cholam* ear-head-bug was noticed at the time of flowering—BHC. 10 % dust was given as control measure. (iii) Grain yield. (iv) (a) 1957—contd. (b) No. (c) Nil. (v) Nil. (vi) and (vii) Nil.

5. RESULTS :

(i) 154.6 lb./ac. (ii) 69.88 lb./ac. (iii) Control vs other treatments is highly significant. P effect is significant. Other effects are not significant. (iv) Av. yield of grain in lb./ac.

Control = 283.3 lb./ac.

	S ₁	S ₂	S ₃	Mean	P ₁	P ₂
M ₁	146.6	183.9	158.0	162.8	148.8	176.8
M ₂	157.9	114.0	122.2	131.4	116.2	146.5

S.E. of body of M×P or S×P table	= 23.3 lb./ac.

Crop :- Jowar.**Ref :- M. 58(134).****Site :- Millet Breeding Stn., Coimbatore.****Type :- 'MV'.**

Object :—To study the response of different strains of Jowar to different fertilizers.

1. BASAL CONDITIONS :

- (i) (a) Nil. (b) *Jowar*. (c) 5 tons/ac. of F.Y.M. + 30 lb./ac. of P_2O_5 as Super and 40 lb./ac. of N as A/S. (ii) (a) Red loam. (b) Refer soil analysis, Coimbatore. (iii) 12.3.1958. (iv) (a) 4 ploughings. (b) Line sowing. (c) 15 lb./ac. (d) $1.32' \times 0.66'$. (e) 1 seedling/hole. (v) 5 tons/ac. of C.M. (vi) As per treatments. (vii) Irrigated. (viii) 1 weeding. (ix) 9.19". (x) 15.7.1958.

2. TREATMENTS :**Main-plot treatments :**

6 levels of manuring : $M_0=0$, $M_1=25$ lb./ac. of P_2O_5 as Super, $M_2=25$ lb./ac. of P_2O_5 as Super+60 lb./ac. of N as A/S, $M_3=25$ lb./ac. of P_2O_5 as Super+80 lb./ac. of N as A/S, $M_4=25$ lb./ac. of P_2O_5 as Super+100 lb./ac. of N as A/S, $M_5=25$ lb./ac. of P_2O_5 as Super+120 lb./ac. of N as A/S.

Sub-plot treatments :

6 varieties : $V_1=CO-4$, $V_2=CO-12$, $V_3=CO-16$, $V_4=CO-18$ and $V_5=K-2$.

3. DESIGN :

- (i) Split-plot. (ii) (a) 6 main-plots/block ; 5 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) $13.2' \times 7.9'$. (b) $13.2' \times 6.6'$. (v) 0.66' on either side. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Yield of grain. (iv) (a) and (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) Nil. (vii) Expt. was conducted by Millet Specialist, Coimbatore.

5. RESULTS :

- (i) 1180 lb./ac. (ii) (a) 198 lb./ac. (b) 151 lb./ac. (iii) M effect and interaction M×V are significant. V effect is highly significant. (iv) Av. yield of grain in lb./ac.

	M_0	M_1	M_2	M_3	M_4	M_5	Mean
V_0	988	1238	1150	1213	1338	1538	1244
V_1	1213	1000	1325	1238	1175	1500	1242

V_3	1038	1013	1175	1038	1288	1275	1138
V_4	1175	1038	1363	1300	1350	1425	1275
Mean	998	1033	1228	1170	1230	1420	1180

S.E. of difference of two

1. M marginal means = 62.6 lb./ac.
2. V marginal means = 43.6 lb./ac.
3. V means at the same level of M = 106.8 lb./ac.
4. M means at the same level of V = 114.2 lb./ac.

Crop :- Jowar (Summer).**Ref :- 58(135).****Site :- Millet Breeding Stn., Coimbatore.****Type :- 'CM'.**

Object :—To compare the farm method of cultivation with Poona method and Ryot's method.

1. BASAL CONDITIONS :

- (i) (a) Nil. (b) *Jowar*. (c) 5 tons/ac. of F.Y.M. + 30 lb./ac. P₂O₅ as Super and 40 lb./ac. N as A/S.
 (ii) (a) Red loam. (b) Refer soil analysis, Coimbatore. (iii) 13.3.1958. (iv) (a) 4 ploughings.
 (b) Little sowing. (c) 15 lb./ac. (d) and (e) As per treatments. (v) 5 tons/ac. of F.Y.M. and 30 lb./ac. P₂O₅ as Super. (vi) CO-8. (vii) Irrigated. (viii) 1 weeding and 2 thinnings. (ix) 9.19". (x) 24.6.1958.

2. TREATMENTS :

Three methods of cultivation :

1. Poona method : 60 lb./ac. of N as A/S applied in equal doses, 3 and 6 weeks after sowing, 10 to 12 seeds/hole to be thinned in 3 stages to 4 plants/hole at 1.98' × 1.32' spacing.
2. Farm method : 40 lb./ac. of N as A/S applied in equal doses, 3 and 6 weeks after sowing, 1 plant/hill at 1.32' × 0.66' spacing.
3. Ryot's method : 60 lb./ac. of N as A/S applied in equal doses, 3 and 6 weeks after sowing, 1 plant/hill at 0.66' × 0.66' spacing.

3. DESIGN

- (i) R.B.D. (ii) (a) 3. (b) N.A. (iii) 8. (iv) (a) 13.2' × 7.92'. (b) 13.2' × 5.94'. (vi) N.A. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Yield of grain. (iv) (a) and (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) Nil. (vii) Expt. was conducted by Millet Specialist, Coimbatore.

5. RESULTS :

- (i) 7.9 lb./ac. (ii) 43.5 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of grain in lb./ac.

Treatment	1	2	3
Av. yield	614	776	766

$$\text{S.E./mean} = 15.4 \text{ lb./ac.}$$

Crop :- Jowar (Summer).

Ref :- M. 55(88)

Site :- Agri. College and Res. Inst., Coimbatore.

Type :- 'ICM'.

Object :- To study the combined effect of tillage, manures and irrigation on *Jowar*.

1. BASAL CONDITIONS :

(i) (a) *Jowar*—Cotton—*Ragi* with a G.M. crop between *Ragi* and *Jowar* once in 2 years. (b) *Sebania* (G.M.). (c) Nil. (a) Red loam. (b) Refer soil analysis, Coimbatore. (iii) 26.3.1955. (iv) (a) As per treatments. (b) Line sowing. (c) N.A. (d) 1.32' × 1.32'. (e) 2. (v) 5 tons/ac. of C.M. (vi) CO-9 (early). (vii) Irrigated. (viii) 1 hoeing and 1 weeding. (ix) 9.32'. (x) 4.7.1955.

2. TREATMENTS :**Strips in one direction :**

3 levels of irrigation : I₁=20", I₂=25" and I₃=30".

Strips in the perpendicular direction :

All combinations of (1) and (2).

(1) 2 levels of ploughings : T₁=Shallow ploughings (with country plough) and T₂=Deep ploughing (victory plough).

(2) 3 levels of manuring : M₁=30 lb./ac. of N+30 lb./ac. of P₂O₅; M₂=60 lb./ac. of N+45 lb. ac. of P₂O₅+50 lb./ac. of K₂O and M₃=90 lb./ac. of N+60 lb./ac. of P₂O₅+50 lb./ac. of K₂O.

N as A/S, P₂O₅ as Super and K₂O as Pot. Sul. were applied.

3. DESIGN :

(i) Strip-plot (ii) (a) 18. (b) N.A. (iii) 4. (iv) (a) 33' × 13.2'. (b) 29.70' × 10.56'. (v) 1.65' × 1.32'. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) B.H.C. 50% was sprayed against earhead bugs on *jowar*. (iii) Yield of grain. (iv) 1954—contd. (b) Yes. (c) Nil. (v) and (vi) Nil. (vii) Expt. was conducted by Agronomist, Coimbatore.

5. RESULTS :

- (i) 2733 lb./ac. (ii) (a) 278.2 lb./ac. (b) 295.7 lb./ac. (c) 240.8 lb./ac. (ii) None of the effects or interactions is significant. (iv) Av. yield of grain in lb./ac.

	I ₁	I ₂	I ₃	Mean	M ₁	M ₂	M ₃

Type :- 'D'.

Object :—To find out the best method to control stem-borer.

1. BASAL CONDITIONS :

- (i) (a) to (c) N.A. (ii) (a) Black loam. (b) Refer soil analysis, Coimbatore. (iii) 19.2.1958. (iv) (a) 3 ploughings. (b) N.A. (c) 12 to 15 lb./ac. (d) 9"×9". (e) 1. (v) 5 tons/ac. of F.Y.M. (vi) CO—18. (viii) Irrigated. (vii) Thinning and weeding. (ix) 6.35". (x) 7.6.1958.

2. TREATMENTS :

All combinations of (1), (2) and (3)+2 extra treatments

(1) 3 pesticides : P₁=Metasystox, P₂=Systox and P₃=Pestox.

(2) 2 concentrations : C₁=0.1% and C₂=0.2%.

(3) 2 methods of application : M₁=Spraying and M₂=Along with irrigation.

Extra treatments : T₁=Spraying water and T₂=Control (no treatment).

Treatments applied on : 18.3.1958, 10.4.1958, 30.4.1958 and 26.5.1958.

3. DESIGN :

- (i) R.B.D. (ii) (a) 14. (b) 168'×48' (iii) 4. (iv) (a) 24'×24'. (b) 21'×21'. (v) 1½'×1½'. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Stem-borer in the 2nd week of March 1958. Controlled as per treatments. (iii) 5 counts of stem-borer at fortnightly intervals in 100 plants and yield of grain. (iv) (a) 1958—contd. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) $\sin^{-1}\sqrt{p}$ transformation used where p is the percent infestation. (vii) Experiment was conducted by Entomologist, Coimbatore.

5. RESULTS :

I. % infestation of stem-borer

- (i) 23.12 degrees. (ii) 1.14 degrees. (iii) No effect is significant. (iv) Av. incidence stem-borer.

$$T_1 = 24.16 \text{ degrees}; T_2 = 23.60 \text{ degrees.}$$

	C ₁	C ₂	Mean	M ₁	M ₂

Crop :- Ragi (*Rabi*).**Ref :- M. 59(SFT).****Centre :- Salem (c.f.).****Type :- 'M'.**

Object :—Type A—To study the responses of Ragi to levels of N, P and K applied individually and in combinations.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) Red. (iii) N.A. (iv) N.A./December 1959 to January 1960. (v) (a) 6 ploughings. (b) Transplanting. (c) —. (d) and (e) N.A. (vi) and (vii) N.A. (viii) 2 weedings. (ix) N.A. (x) April 1960.

2. TREATMENTS :

0 = Control (no manure).

n = 20 lb./ac. of N as A/S.

p = 20 lb./ac. of P₂O₅ as Super.

np = 20 lb./ac. of N as A/S + 20 lb./ac. of P₂O₅ as Super.

k = 20 lb./ac. of K₂O as Mur. Pot.

nk = 20 lb./ac. of N as A/S + 20 lb./ac. of K₂O as Mur. Pot.

pk = 20 lb./ac. of P₂O₅ as Super + 20 lb./ac. of K₂O as Mur. Pot.

nPk = 20 lb./ac. of N as A/S + 20 lb./ac. of P₂O₅ as Super + 20 lb./ac. of K₂O as Mur. Pot.

3. DESIGN :

(i) and (ii) The district has been divided into four agriculturally homogeneous zones and one field assistant posted in each zone. The field assistant conducts the trials in one Revenue circle or thana in the zone and the circle/thana is changed once in two years within the same zone. Each field Assistant is required to conduct 31 trials in a year 8 on a *khari*/cereal, 8 on a *rabi* cereal, 8 on cash crop, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of type A and the other half of type B on crops other than the legumes. The three trials on legumes are of type C. Residual effects of phosphate application are studied on Type C trials in two out of the four zones in each district every year. The above experiments are laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village. (iii) (a) and (b) 1/40 ac.

4. GENERAL :

(i) Normal. (ii) N.A. (iii) Grain yield. (iv) (a) 1959—contd. (b) No. (c) N.A. (v) (a) and (b) As per treatments. (vi) and (vii) N.A.

5. RESULTS :

Treatment	0	n	p	np	k	nk	pk	nPk
Av. yield	1950	2181	2238	2477	2255	2493	2576	2822

G.M. = 2374 lb./ac.; S.E./mean = 74.24 lb./ac. and no. of trials = 4.

Crop :- Ragi (Rabi).**Ref :- M. 59(SFT).****Centre :- Salem (c.f.).****Type :- 'M'.**

Object :—Type B—To investigate the relative efficiency of different nitrogenous fertilizers at different doses.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) Red. (iii) Nil. (iv) N.A./December 1959 and January 1960. (v) (a) 5 to 6 ploughings with country plough. (b) Transplanting. (c) —. (d) and (e) N.A. (vi) Early variety. (vii) Irrigated. (viii) 2 hand weedings. (ix) N.A. (x) April 1960.

2. TREATMENTS :

0 = Control (no manure).
 n_1 = 20 lb./ac. of N as A/S.
 n_2 = 40 lb./ac. of N as A/S.
 n_1' = 20 lb./ac. of N as Urea.
 n_2' = 40 lb./ac. of N as Urea.
 n_1''' = 20 lb./ac. of N as C/A/N.
 n_2''' = 40 lb./ac. of N as C/A/N.

3. DESIGN and 4. GENERAL :

Same as in expt. no. 59(SFT) Type A on page 238 conducted at Salem.

5. RESULTS :

Treatment	0	n_1	n_2	n_1'	n_2'	n_1'''	n_2'''
Av. yield	1317	1514	1786	1596	1728	1761	1810

G.M.=1645 lb./ac. ; S.E./mean = 58.18 lb./ac. and no. of trials=4.

Object :—To study the effect of different insecticides to control Brinjal shoot and fruit borer.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Red loam. (b) Refer soil analysis, Coimbatore, (iii) 3, 4.3.1958. (iv) (a) 3 to 4 ploughings. (b) Transplanting. (c) About 7000 seedlings/ac. (d) 2½'×2½'. (e) 1. (v) 15 tons/ac. of F.Y.M.+100 lb./ac. of A/S+200 lb./ac. of Super+100 lb./ac. of Potash. (vi) *Okhla* (medium). (vii) Irrigated. (viii) Hand hoeing and weeding twice and earthing up once. (ix) 2.6". (x) 10.5.1958 to 20.6.1958.

2. TREATMENTS :

6 insecticides : I₀=Control (no insecticide), I₁=Lindane 0.1%, I₂=Endrin 0.02%, I₃=Dieldrin 0.1%, I₄=DDT 0.1% and I₅=Folidol 0.05%.

5 rounds of treatments given.

3. DESIGN :

(i) R.B.D. (ii) (a) 6. (b) 25'×150'. (iii) 4. (iv) (a) 25'×25'. (b) 20'×20'. (v) One row left as border. (vi) Yes.

4. GENERAL :

Same as in expt. no. 57(63) on page 255.

5. RESULTS :

See on page 257 under expt. no. 58(21).

Crop :- Brinjal (Monsoon).

Ref :- M. 58(21).

Site :- Agri. College & Res. Instt., Coimbatore.

Type :- 'D'.

Object :— To study the effect of insecticides against the Brinjal shoot and fruit borer.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Red loam. (b) Refer soil analysis, Coimbatore. (iii) 6.8.1958. (iv) 3 to 4 ploughings. (b) Transplanting. (c) About 7000 seedlings/ac. (d) 2½'×2½'. (e) 1. (v) 15 tons/ac.

of F.Y.M.+100 lb./ac. of A/S+200 lb./ac. of Super+100 lb./ac. of Potash. (vi) *Okhla* (medium). (vii) Irrigated. (viii) Hand hoeing and weeding twice and earthing up once. (ix) 10.47". (x) 2.10.1958 to 18.11.1958.

2. TREATMENTS :

6 insecticides : I_0 =Control (no insecticides), I_1 =Lindane 0.1%, I_2 =Endrin 0.02%, I_3 =Dieldrin=0.1%, I_4 =D.D.T. 0.1% and I_5 =Folidol 0.05%.

Insecticides sprayed on 22.8.1958, 10.9.1958, 2.10.1958 and 21.10.1958.

3. DESIGN :

(i) R.B.D. (ii) (a) 6. (b) 25'×150'. (iii) 4. (iv) (a) 25'×25'. (b) 20'×20'. (v) N.A. (vi) Yes.

4. GENERAL :

Same as in expt. no 57(63) on page 255.

5. RESULTS :

(i) to (iv)

Crop :- Potato (1st crop).

Ref :- M. 54(6).

Site :- Agri. Res. Stn., Nanjanad.

Type :- 'M'.

Object :—To study the effect of application of split doses of Nanjanad mixture to Potato.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Potato—G.M. (Lupin-rye mixture). (c) N.A. (ii) (a) Laterite. (b) Refer soil analysis, Nanjanad. (iii) 25.3.1954. (iv) (a) Hand forked and breaking clods to a fine tilth. (b) to (e) N.A. (v) Nil. (vi) Great Scot (medium). (vii) Unirrigated. (viii) Nil. (ix) 44". (x) 14.9.1954.

2. TREATMENTS :

1. No fertilizer.
2. $\frac{1}{4}$ dose of Nanjanad mixture at planting + $\frac{3}{4}$ dose at 1st earthing up.
3. $\frac{1}{2}$ dose of Nanjanad mixture at planting + $\frac{1}{2}$ dose at 1st earthing up.
4. $\frac{3}{4}$ dose of Nanjanad mixture at planting + $\frac{1}{4}$ dose at 1st earthing up.
5. Complete dose at planting.

3. DESIGN :

(i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 4. (iv) (a) 1/100 ac. (b) 1/200 ac. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Height and growth of plants and tuber yield. (iv) (a) 1954—1956. (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 16655 lb./ac. (ii) 1290 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of tuber in lb./ac.

Treatment	1	2	3	4	5
Av. yield	12025	15725	17025	19525	18975

S.E./mean = 645 lb./ac.

Crop :- Potato (2nd crop).**Ref :- M. 54(6a).****Site :- Agri. Res. Stn., Nanjanad.****Type :- 'M'.**

Object :—To study the effect of application of split doses of Nanjanad mixture to Potato.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Potato—G.M. (Lupin-rye mixture). (c) N.A. (ii) (a) Laterite. (b) Refer soil analysis, Nanjanad. (iii) 11.8.1954. (iv) (a) Hand forking and breaking clods to a fine tilth. (b) to (e) N.A. (v) Nil. (vi) Great Scot (medium). (vii) Unirrigated. (viii) Nil. (ix) 44°. (x) 17.12.1954.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 54(6) on page 271.

5. RESULTS :

(i) 11410 lb./ac. (ii) 1282 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of tuber in lb./ac.

Treatment	1	2	3	4	5
Av. yield	7150	9550	11000	14600	14750

S.E./mean = 641 lb./ac.

Type :- 'M'.

Object :—To study the effect of application of magnesium and lime with Nanjanad mixture to Potato.

1. BASAL CONDITIONS

- (i) (a) Nil. (b) Potato. (c) N.A. (ii) (a) Laterite. (b) Refer soil analysis, Nanjanad. (iii) 31.3.1954.
- (iv) (a) Hand forking and breaking clods to fine tilth. (b) and (c) N.A. (d) 24° between rows. (e) —.
- (v) 5000 lb./ac. of G.L. as B.D.+1946 lb./ac. of Nanjanad mixture as B.D. (vi) Great Scot (medium). (vii) Unirrigated. (viii) Nil. (ix) 44.0°. (x) 8.9.1954.

2. TREATMENTS :

All combinations of (1), (2) and (3) +2 extra treatments

(1) 3 levels of MgO as $MgSO_4$: $S_1=10$, $S_2=20$ and $S_3=30$ lb./ac.

(2) 2 levels of slaked lime : $L_0=0$ and $L_1=1500$ lb./ac.

(3) 2 methods of application of MgO : $M_1=\text{Soil application}$ and $M_2=\text{Spray application}$.

Extra treatments : $T_0=\text{Control}$ and $T_1=1500$ lb./ac. of slaked lime.

3. DESIGN :

- (i) R.B.D. (ii) (a) 14. (b) N.A. (iii) 4. (iv) (a) and (b) 1/200 ac. (v) Nil. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Growth, height measurements and tuber yield. (iv) (a) 1953—1954. (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

- (i) 15404 lb./ac. (ii) 1840 lb./ac. (iii) No effect is significant. (iv) Av. yield of tuber in lb./ac.

$$T_0 = 13900 \text{ lb./ac.}; T_1 = 14850 \text{ lb./ac.}$$

Object :—To study the effect of Mg on Potato.

1. BASAL CONDITIONS :

- (i) (a) Nil. (b) Fallow. (c) Nil. (ii) Laterite. (b) Refer soil analysis, Nanjanad. (iii) 2.4.1955. (iv) (a) 3 ploughings. (b) N.A. (c) 4500 lb./ac. (d) 18"×9". (e) 1. (v) 5 tons/ac. of F.Y.M. (vi) Great Scot. (vii) Unirrigated. (viii) Weeding and 1 earthing. (ix) 38.15". (x) 29.7.1955.

2. TREATMENTS :

1. Control.
 2. MgSO₄ at 30 lb./ac. at planting.
 3. MgSO₄ at 60 lb./ac. at planting.
 4. MgSO₄ at 60 lb./ac. at planting+30 lb./ac. after one month.
- Treatments applied to the soil.

3. DESIGN :

- (i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 4. (iv) 1/133.3 ac. (b) 1/200 ac. (v) N.A. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Tuber yield. (iv) (a) 1955—58. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

- (i) 13938 lb./ac. (ii) 904 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of tuber in lb./ac.

Treatment	1	2	3	4
Av. yield	12450	14500	14400	14400

S.E./mean = 452 lb./ac.

Crop :- Potato.**Ref :- M. 56(98).****Site :- Agri. Res. Stn., Nanjanad.****Type :- 'M'.**

Object :—To study the effect of Mg on Potato.

1. BASAL CONDITIONS

(i) (a) Lupin—Potato. (b) Lupin. (c) Nil. (ii) (a) Laterite. (b) Refer soil analysis, Nanjanad. (iii) 6.4.1956. (iv) (a) 3 ploughings. (b) Planting in furrows. (c) 2000 lb./ac. (d) 24"×9". (e) N.A. Site :- Agri. Res. Stn., Nanjanad.

Type :- 'M'.

Object :—To study the comparative merits of different G.M. on Potato.

1. BASAL CONDITIONS :

(i) (a) and (b) As per treatments. (c) Nil. (ii) (a) Laterite. (b) Refer soil analysis, Nanjanad. (iii) 2.9.1959. (iv) (a) 3 ploughings. (b) N.A. (c) 4500 lb./ac. (d) 18"×9". (e) 1. (v) 1946 lb./ac. of Nanjanad mixture. (vi) Great Scot (medium). (vii) Unirrigated. (viii) Weeding and earthing. (ix) 24.22". (x) 20.12.1959.

2. TREATMENTS :

Same as in expt. no. 57(99) on page 285.

G.M. sown on 25.4.1959. G₁, G₂ and G₃ incorporated on 11.8.1959, 16.7.1959 and 16.7.1959 respectively.

3. DESIGN and 4. GENERAL :

Same as in expt. no. 57(99) on page 285.

5. RESULTS :

(i) 8390 lb./ac. (ii) 775 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of tuber in lb./ac.

Treatment	G ₀	G ₁	G ₂	G ₃
Av. yield	8118	8283	8415	8745

S.E./mean = 316 lb./ac.

Crop :- Potato (Summer).

Ref :- M. 57(63).

Site :- Agri. Res. Stn., Nanjanad.

Type :- 'C'.

Object :—To find out the optimum depth of cultivation for planting Potatoes.

1. BASAL CONDITIONS :

(i) (a) Potato—Lupin. (b) Lupin. (c) Nil. (ii) (a) Laterite. (b) Refer soil analysis, Nanjanad. (iii) 7.4.1957. (iv) (a) As per treatments. (b) Placement in furrows. (c) N.A. (d) 2'×9". (e) --. (v) 1946 lb./ac. of Nanjanad mixture applied at the time of planting in furrows. (vi) Great Scot (medium). (vii) Unirrigated. (viii) Hoeing, weeding and earthing. (ix) 33.41". (x) 23.7.1957.

2. TREATMENTS :

4 depths of cultivation : D₁=4", D₂=6", D₃=9" and D₄=12".

D₁ was with *guddalies* where as D₂ to D₄ were with digging fork.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) 86'×11'. (iii) 6. (iv) (a) 1/200 ac. (b) 1/400 ac. (v) and (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Germination count, height of plant, yield and weight of different grades. (iv) (a) 1957—contd. (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS:

(i) 13,042 lb./ac. (ii) 2038 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of tuber in lb./ac.

Treatment	D ₁	D ₂	D ₃	D ₄
Av. yield	12567	13333	13267	13000
S.E./mean = 832 lb./ac.				

Crop :- Potato.**Ref :- M. 58(20).****Site :- Agri. Res. Stn., Nanjanad.****Type :- 'C'.**

Object :—To find out the optimum depth of cultivation for planting Potato.

1. BASAL CONDITIONS :

(i) (a) Potato—Lupin. (b) Lupin. (c) Nil. (ii) (a) Laterite. (b) Refer soil analysis, Nanjanad. (iii) 2.4.1958. (iv) (a) As per treatments. (b) In ridges and furrows. (c) N.A. (d) 2'×9". (e) N.A. (v) 1946 lb./ac. of Nanjanad mixture applied at the time of planting in furrows. (vi) Great Scot (medium). (vii) Unirrigated. (viii) Hoeing, weeding and earthing. (ix) 32.85". (x) 23.7.1958.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 57(63) on page 288.

5. RESULTS :

(i) 13,133 lb./ac. (ii) 1666 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of tuber in lb./ac.

Treatment	D ₁	D ₂	D ₃	D ₄
Av. yield	13133	12800	12666	13933
S.E./mean = 680 lb./ac.				

Crop :- Potato (Summer).**Ref :- M. 59(18).****Site :- Agri. Res. Stn., Nanjanad.****Type :- 'C'.**

Object :—To find out the optimum depth of cultivation for planting Potato.

1. BASAL CONDITIONS :

(i) (a) Potato—Lupin. (b) Lupin. (c) Nil. (ii) (a) Laterite. (b) Refer soil analysis, Nanjanad. (iii) 15.4.1959. (iv) (a) As per treatments. (b) In ridges and furrows. (c) N.A. (d) 2'×9". (e) N.A. (v) 1946 lb./ac. of Nanjanad mixture applied at the time of planting in furrows. (vi) Great Scot (medium). (vii) Unirrigated. (viii) Hoeing, weeding and earthing. (ix) 55.82". (x) 9.9.1959.

2. TREATMENTS :

3 depths of cultivation : D₁=4" with firefly plough, D₂=6" with Victory plough and D₃=9" with digging fork.

3. DESIGN :

(i) R.B.D. (ii) (a) 3. (b) 86'×11'. (iii) 8. (iv) (a) 1/50 ac. (b) 1/100 ac. (v) and (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Tuber yield and weight measurement. (iv) (a) 1957—contd. (modified in 1959). (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 16545 lb./ac. (ii) 2121 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of tuber in lb./ac.

Treatment	D ₁	D ₂	D ₃
Av. yield	16721	16528	16385
S.E./mean = 750 lb./ac.			

Crop :- Potato (Summer).**Ref :- M. 57(111).****Site :- Agri. Res. Stn., Nanjanad.****Type :- 'C'.**

Object :— To determine the best combination of size of seed and row spacing for Potato.

1. BASAL CONDITIONS :

(i) (a) Lupin—Potato. (b) Lupin. (c) Nil. (ii) (a) Laterite. (b) Refer soil analysis, Nanjanad. (iii) 10.4.1957. (iv) (a) 3 ploughings. (b) N.A. (c) and (d) As per treatments. (e) —. (v) 1946 b.ac. of Nanjanad mixture. (vi) Great Scot (medium). (vii) Unirrigated. (viii) Hoeing, weeding and earth-ing. (ix) 33.64". (x) 30.7.1957.

2. TREATMENTS :

All combinations of (1), '2, and 3)

(1) 4 seed sizes : S₁=0.5, S₂=1.0, S₃=1.5 and S₄=2.0 oz.(2) 4 row spacings : R₁=12", R₂=16", R₃=20" and R₄=24".(3) 4 plant spacings : L₁=6", L₂=9", L₃=12" and L₄=15".**3. DESIGN :**

(i) Factor in R.B.D. (ii) (a) 64. (b) 144'×70'. (iii) 2. (iv) (a) and (b) 14'×8'. (v) Nil. (vi) Yes

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Tuber yield. (iv) (a) 1957—1959. (b) No. (c) Nil. (v, to (vii) Nil.

5. RESULTS :

(i) 18,572 lb./ac. (ii) 2829 lb./ac. (iii) Main effects of L, S and R are highly significant. Interactions are not significant. (iv) Av. yield of tuber in lb./ac.

	L ₁	L ₂	L ₃	L ₄	Mean	S ₁	S ₂	S ₃	S ₄

Same as in expt. no. 57(103) on page 294.

5. RESULTS :

(i) 12257 lb./ac. (ii) 1680 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of tuber in lb./ac.

Treatment	1	2	3	4	5	6	7	8	9
Av. yield	12234	12369	12571	12705	11764	12302	12167	12369	11831

S.E./mean = 686 lb./ac.

Crop :- Sweet Potato.

Ref :- M. 54(109).

Site :- Agri. College & Res. Instt., Coimbatore.

Type :- 'M'.

Object :—To determine a suitable manural schedule for Sweet Potato.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Sannhemp. (c) Nil. (ii) (a) Stiff clay. (b) Refer soil analysis, Coimbatore. (iii) 26 to 28.11.1954. (iv) 4 ploughings, working Cambridge roller and ridge plough once. (b) N.A. (c) 20,000 cuttings/ac. (d) 2'×6". (e) N.A. (v) As per treatments. (vi) V—6. (vii) Irrigated. (viii) Weeding twice. (ix) N.A. (x) 9 to 14.5.1955.

2. TREATMENTS :**Main-plot treatments :**

3 levels of B.D. : B_0 =No B.D., B_1 =F.Y.M. at 10,000 lb./ac. and B_2 =G.L. to supply same N as in B_1 .

Sub-plot treatments :

All combinations of (1) and (2)

(1) 3 levels of N as A/S : $N_0=0$, $N_1=50$ and $N_2=100$ lb./ac.

(2) 3 levels of K_2O as Pot. Sul. : $K_0=0$, $K_1=80$ and $K_2=160$ lb./ac.

Sub-sub-plot treatments :

2 levels of P_2O_5 as Super : $P_0=0$ and $P_1=80$ lb./ac.

N and K applied one month after planting. P applied at planting. Three basal dressings allotted to 6 replications at random so that each treatment covers 2 replications.

3. DESIGN :

(i) Split-plot. (ii) (a) 3 main-plots/replication ; 9 sub-plots/main-plot ; 2 sub-sub-plots/sub-plot. (b) N.A. (iii) 2. (iv) (a) 24'×15'. (b) 20'×13'. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Slight incidence of sweet potato weevil. (iii) Tuber yield. (iv) (a) 1951—58. (b) No. (c) Nil. (v) to (vi) Nil. (vii) Expt. was conducted by Horticulturist, Coimbatore.

5. RESULTS :

(i) 4471 lb./ac. (ii) (a) 10927 lb./ac. (b) 2174 lb./ac. (c) 1362 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of tuber in lb./ac.

	B ₀	B ₁	B ₂	K ₀	K ₁	K ₂	P ₀	P ₁	Mean

Crop :- Tomato (Summer).**Ref :- M. 56(99).****Site :- Agri. College & Res. Instt., Coimbatore.****Type 'IMV'.**

Object :—To determine a suitable manurial schedule and an economic irrigation practice for Tomato.

1. BASAL CONDITIONS :

- (i) (a) Nil. (b) and (c) N.A. (ii) (a) Red loam. (b) Refer soil analysis, Coimbatore. (iii) 20.4.1956. (iv) (a) 3 ploughings. (b) N.A. (c) 4 ozs/ac. (d) 2½'×2½'. (e) 2. (v) 50 lb./ac. of N as F.Y.M. (vi) As per treatments. (vii) Irrigated. (viii) 2 weedings. (ix) N.A. (x) 9.8.1956.

2. TREATMENTS :**Main-plot treatments :**

All combinations of (1) and (2)

- (1) 3 varieties : V_1 =Red jacket, V_2 =Early Chatham and V_3 =Ottawa to 17.

- (2) 2 intervals of irrigation : $I_1=4$ and $I_2=7$ days.

Sub-plot treatments :

All combinations of (1), (2) and (3)

- (1) 2 levels of N as A/S : $N_0=0$ and $N_1=30$ lb./ac.

- (2) 2 levels of P_2O_5 as Super : $P_0=0$ and $P_1=60$ lb./ac.

- (3) 2 levels of K_2O as Pot. Sul. : $K_0=0$ and $K_1=30$ lb./ac.

3. DESIGN :

- (i) Split-plot. (ii) (a) 6 main-plots/block ; 8 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) 10'×12½'. (b) 5'×7½'. (v) One row left on all sides. (vi) Yes.

4. GENERAL :

- (i) Not satisfactory. (ii) Nil. (iii) Tomato yield. (iv) (a) N.A. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) Heavy rains damaged the crops to some extent. (vii) Expt. was conducted by Horticulturist, Coimbatore.

5. RESULTS :

- (i) 2390 lb./ac. (ii) (a) 2179 lb./ac. (b) 1218 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of tomato in lb./ac.

Object :—To compare the performance of Tapioca raised from setts planted erect and horizontally.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Maize. (c) Nil. (ii) (a) Stiff clay soil. (b) Refer soil analysis, Coimbatore. (iii) 26.8.1954. (iv) (a) 4 ploughings followed by passing Cambridge roller. Ridge plough was then passed to form ridges and furrows. (b) to (d) N.A. (e) 1. (v) 5 to 7 tons/ac. of F.Y.M. applied at the time of planting. (vi) Valenca. (vii) Irrigated. (viii) 2 weedings. (ix) 28.34". (x) 19.7.1955.

2. TREATMENTS :

1. Planting setts erect.
2. Planting setts horizontally.

3. DESIGN :

- (i) R.B.D. (ii) (a) 2. (b) N.A. (iii) 12. (iv) (a) 10'×8'. (b) 10'×6'. (v) 2 rows. (vi) Yes.

4. GENERAL :

(i) Poor. (ii) Nil. (iii) Tuber yield. (vi) (a) 1953—contd. (b) and (c) No. (v) (a) and (b) Nil. (vi) Nil. (vii) Expt. was conducted by Horticulturist, Coimbatore.

5. RESULTS :

(i) 7322 lb./ac. (ii) 6998 lb./ac. (iii) Treatment difference is not significant. (iv) Av. yield of tuber in lb./ac.

Treatment	1	2
Av. yield	7726	7018

$$\text{S.E./mean} = 2020 \text{ lb./ac.}$$

Crop :- Tapioca.**Ref :- M. 55(21).****Site :- Agri. College & Res. Instt., Coimbatore.****Type :- 'C'.**

Object :—To find out the performance of setts taken from the different portions of the stem for Tapioca.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) and (c) N.A. (ii) (a) Loamy soil. (b) Refer soil analysis, Coimbatore. (iii) 29.7.1955. (iv) (a) 4 ploughings. (b) N.A. (c) 8000 setts/ac. (d) 2'×1½'. (e) 1. (v) 5 tons/ac. of F.Y.M. (vi) Valenca. (vii) Irrigated. (viii) 3 weedings. (ix) 18.14". (x) 27.6.1956.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 54(46) on page 329.

4. GENERAL :

(i) Poor. (ii) Nil. (iii) Tuber yield. (iv) (a) 1953—1955. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) Nil. (vii) Expt. was conducted by Horticulturist, Coimbatore.

5. RESULTS :

(i) 5956 lb./ac. (ii) 1840.8 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of tuber in lb./ac.

Treatment	1	2	3
Av. yield	5745	6688	5436

$$\text{S.E./mean} = 531.4 \text{ lb./ac.}$$

Crop :- Sugarcane (*Adsalı*).**Ref :- M. 55(76).****Site :- Central Sugarcane Res. Stn., Cuddalore.****Type :- 'M'.**

Object :—To determine the optimum dose of N and time of application of the final dose to Sugarcane crop.

1. BASAL CONDITIONS :

(i) (a) *Ragi*—Sugarcane—Paddy—G.M. (b) *Ragi*. (c) 40 lb./ac. of N as A/S. (ii) (a) Sandy loam. (b) Refer soil analysis, Cuddalore. (iii) 23.8.1955. (iv) (a) 5 ploughings. (b) Planting in rows. (c) 15000 3-budded setts/ac. (d) 3.3" between rows. (e) —. (v) As per treatments. (vi) CO—527 (early). (vii) Irrigated. (viii) 3 weedings, propping once and earthing up twice. (ix) 83.2". (x) 31.12.1956.

TREATMENTS :

Main-plot treatments :

2 levels of N as mixture of A/S and G.N.C. in 2 : 1 ratio : $N_1 = 250$ and $N_2 = 350$ lb./ac.

Sub-plot treatments :

3 times of application of final dose ($\frac{1}{3}$) : T_1 =December 1955, T_2 =March 1956 and T_3 =June 1956.

The first and 2nd dose of manure ($\frac{1}{3}$ each of the dose in main-plots) was given after 45 and 90 days after planting respectively.

3. DESIGN :

- (i) Split-plot. (ii) (a) 2 main-plots/block ; 3 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) $46.2' \times 33'$. (b) $39.6' \times 29.7'$. (v) One row on either side and 1.65' at each end. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Yield of cane. (iv) (a) 1955—1957. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

- (i) 61.10 tons/ac. (ii) (a) 6.27 tons/ac. (b) 8.65 tons/ac. (iii) None of the effects is significant. (iv) Av. yield of sugarcane in tons/ac.

	T_1	T_2	T_3	Mean
N_1	56.39	59.70	62.01	59.37
N_2	59.06	70.91	58.52	62.83
Mean	57.72	65.31	60.26	61.10

- 3. T means at the same level of N = 6.8 tons/ac.
- 4. N means at the same level of T = 6.0 tons/ac.

Crop :- Sugarcane.**Ref :- M. 57(95).****Site :- Central Sugarcane Res. Stn., Cuddalore.****Type :- 'M'.**

Object :—To determine the optimum dose of N, P and K for Sugarcane crop.

1. BASAL CONDITIONS :

- (i) (a) Nil. (b) Sannhemp. (c) Nil. (ii) (a) Sandy loam. (b) Refer soil analysis, Cuddalore. (iii) 5,6,5,1957.
- (iv) (a) 5 ploughings. (b) Planted in furrows. (c) 15000 3-budded setts/ac. (d) 3' between furrows.
- (e) —. (v) 5000 lb./ac. of G.L. (vi) CO—449. (vii) Irrigated. (viii) 3 weedings and earthing up once. (ix) 35.4". (x) Last week of February 1958.

2. TREATMENTS :

1. No manure.
2. 150 lb./ac. of N.
3. 250 lb./ac. of N.
4. 250 lb./ac. of N+100 lb./ac. of P_2O_5 +125 lb./ac. of K_2O .
5. 350 lb./ac. of N.
6. 350 lb./ac. of N+100 lb./ac. of P_2O_5 +125 lb./ac. of K_2O .

N as A.S and G.N.C. in 2 : 1 ratio ; P and K as Triple Super and Mur. Pot. applied as B.D.

3. DESIGN :

- (i) R.B.D. (ii) (a) 6. (b) N.A. (iii) 6. (iv) (a) 39.6'×33'. (b) 33'×26.4' (v) 3.3' alround. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Yield of cane. (iv) (a) and (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

- (i) 43.38 tons/ac. (ii) 5.03 tons/ac. (iii) Treatment differences are highly significant. (iv) Av. yield of cane in tons/ac.

Treatment	1	2	3	4	5	6
Av. yield	17.21	45.12	46.65	48.15	52.16	50.99

S.E/mean = 2.05 tons/ac.

Crop :- Sugarcane.**Ref :- M. 58(107).****Site :- Central Sugarcane Res. Stn., Cuddalore.****Type :- 'M'.**

Object :—To study the effect of foliar application of N on the yield of Sugarcane.

1. BASAL CODNITIONS :

- (i) a) Sugarcane—G.M. crop—Sugarcane. (b) G.M. crop. (c) Nil. (ii) (a) Sandy loam. (b) Refer soil analysis, Cuddalore. (iii) 28, 29.3.1958. (iv) (a) 5 ploughings. (b) Planting in rows. (c) 15000 three-budded setts ac. (d) 3.3' between rows. (e) —. (v) 5000 lb. ac. of G.L. (vi) CO—419. (vii) Irrigated. (viii) 3 weedings and earthing up twice. (ix) 37.20". (x) 2nd week of March 1959.

2. TREATMENTS :

All combinations of (1) and (2)

(1) 2 sources of N : $S_1=A/S$ and $S_2=Urea$.

(2) 2 methods of application : M_1 Application of full dose to soil and M_2 =Application partly to soil and partly by foliar spray.

Full dose of N is 250 lb./ac. and in M_2 150 lb. was applied to soil.

3. DESIGN and 4. GENERAL :

Same as in expt. no. 57(95) above.

5. RESULTS :

- (i) 41.50 tons/ac. (ii) 5.98 tons/ac. (iii) None of the effects is significant. (iv) Av. yield of cane in tons/ac,

	S ₁	S ₂	Mean
M ₁	43.42	39.58	41.50
M ₂	40.92	42.08	41.50
Mean	42.17	40.83	41.50

S.E. of any marginal mean = 1.7 tons/ac.
 S.E. of body of table = 2.4 tons/ac.

Crop :- Sugarcane.

Ref :- M. 59(83).

Site :- Central Sugarcane Res. Stn., Cuddalore.

Type :- 'M'.

Object : - To study the effect of foliar application of N on Sugarcane.

1. BASAL CONDITIONS :

(i) (a) Sugarcane—G.M.—Sugarcane. (b) G.M. crop. (c) Nil. (ii) (a) Sandy loam. (b) Refer soil analysis, Cuddalore. (iii) 17.3.1959. (iv) (a) 5 ploughings. (b) Planting in rows. (c) 15000 3-budded setts/ac. (d) 3.3' apart. (e) —. (v) 5000 lb./ac. of G.L. (vi) Co-785. (vii) Irrigated. (viii) 3 weedings, earthing up twice, trashing and propping. (ix) 47.08." (x) 28.6.1960.

2. TREATMENTS :

Main-plot treatments :

4 levels of N as mixture of A/S and G.N.C. in 2 : 1 ratio : N₀=0, N₁=25, N₂=50 and N₃=75 lb./ac.

Sub-plot treatments :

6 levels of N as Urea : U₀=0, U₁=10, U₂=20, U₃=30, U₄=40, and U₅=50 lb./ac.

A/S and G.N.C. applied to soil in two doses 45 and 90 days after planting. While Urea applied as foliar spray at an interval of 8 days (2% solution).

3. DESIGN :

(i) Split-plot. (ii) (a) 4 main-plots/block ; 6 sub-plots/main-plot. (b) N.A. (iii) 2. (iv) (a) 33'×26.4'. (b) 26.4'×19.8'. (v) one row on all sides. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Yield of cane. (iv) (a) 1959—1960. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 35.8 tons/ac. (ii) (a) 2.107 tons/ac. (b) 7.204 tons/ac. (iii) Main effect of U is highly significant and of N is significant. Interaction U×N is not significant. (iv) Av. yield of cane in tons/ac.

	U ₀	U ₁	U ₂	U ₃	U ₄	U ₅	Mean
N ₀	19.4	18.8	19.3	37.2	35.8	63.7	32.4

Site :- Central Sugarcane Res. Stn., Cuddalore.

Type :- 'C'.

Object :—To study the effect of trashing and propping on the yield of Sugarcane.

1. BASAL CONDITIONS :

(i) (a) Sugarcane—Groundnut or *Ragi*—G.M. (b) Sannhemp. (c) Nil. (ii) (a) Sandy loam. (b) Refer soil analysis, Cuddalore. (iii) 17th to 20th March, 1958. (iv) (a) 5 ploughings. (b) Planting. (c) 15000 three budded setts/ac. (d) 3.3' between rows. (e) N.A. (v) N at 250 lb./ac. as A/S and G.N.C. in 2 : 1 ratio. (vi) CO—449. (vii) Irrigated. (viii) Weeding and earthing up twice. (ix) 38.0". (x) 5th to 10th Feb., 1959.

2. TREATMENTS :

- 1. No trashing and no propping.
- 2. Trashing and no propping.
- 3. Trashing and propping by trash twists.
- 4. Trashing and propping by bamboos.

In treatments 2 to 4 trashing was done twice; propping was done in the 8th month of planting.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 4. (iv) (a) and (b) 1/33.3 ac. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Cane yield. (iv) (a) 1958—1960. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 42.45 tons/ac. (ii) 3.10 tons/ac. (iii) Treatment differences are significant. (iv) Av. yield of cane in tons/ac.

Treatment	1	2	3	4
Av. yield	47.6	42.8	38.9	40.5

S.E./mean = 1.55 tons/ac.

Crop :- Sugarcane.

Ref. :- M. 59(85).

Site :- Central Sugarcane Res. Stn., Cuddalore.

Type :- 'C'.

Object :—To study the effect of trashing and propping on the yield of Sugarcane.

1. BASAL CONDITIONS :

(i) (a) Sugarcane—Groundnut or *Ragi*—G.M. (b) G.M. (Sannhemp). (c) Nil. (ii) (a) Sandy loam. (b) Refer soil analysis, Cuddalore. (iii) 14.2.1959. (iv) (a) 5 ploughings. (b) N.A. (c) 15 000 three budded setts/ac. (d) 3.3' between rows. (e) N.A. (v) 10 tons/ac. of compost+250 lb./ac. of N in 2 equal doses, applied 45 and 90 days after planting. N as A/S and G.N.C. in 2 : 1 ratio was given. (vi) CO—449. (vii) Irrigated. (viii) Earthing up once and 3 weedings. (ix) 47.35". (x) 22.1.1960.

2. TREATMENTS :

1. No trashing and no propping.
2. Trashing but no propping.
3. Trashing and propping by trash twist method.
4. Trashing and propping with bamboos.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 6. (iv) (a) 52.8'×33'. (b) 39.6'×33'. (v) 2 rows on either side of the plot. (vi) Yes.

4. GENERAL :

(i) Lodged. (ii) Early shoot-borer attack was noticed ; spraying Endrine. (iii) Cane yield. (iv) (a) 1958—1960. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 49.87 tons/ac. (ii) 4.57 tons/ac. (iii) Treatment differences are not significant. (iv) Av. yield of cane in tons/ac.

Treatment	1	2	3	4
Av. yield	51.73	49.68	50.21	47.86

S.E./mean = 1.87 tons/ac.

Crop :- Sugarcane.

Ref. :- M. 59(84).

Site :- Central Sugarcane Res. Stn., Cuddalore.

Type :- 'CV'.

Object :—To test the efficacy of Hawaiian cultural practice on the yield of Sugarcane as compared to the local practices.

1. BASAL CONDITIONS :

(i) (a) Sugarcane—Fallow. (b) Fallow. (c) Nil. (ii) (a) Sandy loam. (b) Refer soil analysis, Cuddalore. (iii) 17.9.1959. (iv) (a) As per treatments. (b) Planting in furrows. (c) N.A. (d) As per treatments. (e) N.A. (v) 5000 lb./ac. of G.L.+250 lb./ac. of N as G.N.C. and A/S in 1 : 2 ratio in 3 doses : 90, 90 and 70 lb. applied 45, 90 and 150 days after planting respectively. (vi) As per treatments. (vii) Irrigated. (viii) As per treatments. (ix) 93.57". (x) 11.12.1960.

2. TREATMENTS :

Main-plot treatments :

3 varieties : $V_1 = \text{CO}-527$, $V_2 = \text{CO}-658$ and $V_3 = \text{CO}-785$.

Sub-plot treatments :

2 methods of planting : M_1 =Local method—planting in furrows of $4'' \times 6''$ depth with 3.3' spacing between rows ; partial earthing up and high banking after final manuring. Trashing and trash twist propping, M_2 =Hawaiian method—planting in 18" deep furrows and spacing 4' apart. The crop will be allowed to lodge after May to rest on slopes of the ridges.

3. DESIGN :

- (i) Split-plot. (ii) (a) 3 main-plots/block ; 2 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) $39.6'' \times 33'$. (b) For M_1 : $33'' \times 26.4'$; for M_2 : $31.6'' \times 26.4'$. (v) One row on either side of plot. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Cane yield. (iv) (a) 1959—1961. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

- (i) 51.9 tons/ac. (ii) (a) 6.75 tons/ac. (b) 12.92 tons/ac. (iii) None of the effects is significant. (iv) Av. yield of cane in tons/ac.

	V ₁	V ₂	V ₃	Mean
M_1	50.3	53.7	44.1	49.4
M_2	52.1	60.3	50.9	54.4
Mean	51.2	57.0	47.5	51.9

S.E. difference of any two

1. V marginal means = 3.37 tons/ac.
2. M marginal means = 5.27 tons/ac.
3. M means at the same level of V = 9.14 tons/ac.
4. V means at the same level of M = 7.29 tons/ac.

Crop :- Sugarcane.

Ref :- M. 54(55).

Site :- Sugarcane Res. Stn., Gudiyattam.

Type :- 'CV'.

Object :—To find out the suitability of Rayungan as seed material in comparison with three budded setts.

1. BASAL CONDITIONS :

- (i) (a) G.M.—Paddy—Sugarcane. (b) Paddy. (c) 5000 lb./ac. of G.M.+30 lb./ac. of P_2O_5 as Super+30 lb./ac. of N as A/S. (ii) (a) Sandy. (b) N.A. (iii) 4, 5.3. 1954. (iv) (a) 5 ploughings. (b) N.A. (c) 15000 three budded setts/ac. (d) $2' \times 2.5'$. (e) N.A. (v) 10 tons/ac. of F.Y.M.+200 lb./ac. of N as A/S as top dressing by placement method. (vi) As per treatments. (vii) Irrigated. (viii) 3 weedings. (ix) 40.30". (x) 12th to 28th April, 1955.

2. TREATMENTS :

All combinations of (1), (2) and (3)

- (1) 2 types of seed material : R_1 =Three-budded setts and R_2 =Rayungan.
- (2) 3 spacings within furrows : $S_1=6''$, $S_2=12''$ and $S_3=18''$.
- (3) 2 varieties : $V_1=CO-419$ (late) and $V_2=CO-449$ (medium).

3. DESIGN :

- (i) Fact. in R.B.D. (ii) (a) 12. (b) N.A. (iii) 4. (iv) (a) 1/444.44 ac. (b) 1/714.29 ac. (v) $3.3' \times 1.6'$. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Attack of smuts—removal and burning of infested clumps. (iii) No. of canes, girth, length and yield. (iv) (a) and (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

- (i) 66.2 tons/ac. (ii) 13.4 tons/ac. (iii) None of the effects is significant. (iv) Av. yield of cane in tons/ac.

	S ₁	S ₂	S ₃	R ₁	R ₂	Mean
V ₁	65.8	73.6	70.6	71.7	68.3	70.0
V ₂	56.6	68.4	62.2	65.1	59.7	62.4
Mean	61.2	71.0	66.4	68.4	64.0	66.2
R ₁	59.8	74.7	70.7			
R ₂	62.6	67.3	62.1			

S.E. of V or R marginal mean = 2.73 tons/ac.
 S.E. of S marginal mean = 3.35 tons/ac.
 S.E. of body of V×R table = 3.87 tons/ac.
 S.E. of body of V×S or R×S table = 4.74 tons/ac.

S.E./mean = 3.4 tons/ac.

Crop :- Sugarcane.**Ref :- M. 58(133).****Site :- Central Sugarcane Res. Stn., Cuddalore.****Type :- 'D'.**

Object :—To test the efficacy of different insecticides in controlling the early borer of Sugarcane.

1. BASAL CONDITIONS :

(i) (a) Sugarcane — G.M.—Paddy (b) Paddy. (c) 100 lb./ac. of N as A/S+G.L. at 5 tons/ac. (ii) (a) Sandy loam. (b) Refer soil analysis, Cuddalore. (iii) 2.3 1958. (iv) (a) 5 ploughings. (b) Planting in furrows. (c) 15000 three-budded setts/ac. (d) 3.3' between rows. (e) N.A. (v) 5000 b./ac. of G.L. (vi) CO—449. (vii) Irrigated. (viii) Weeding, earthing up, trashing and propping. (ix) 36.55". (x) Feb. 1959.

2. TREATMENTS :

9 insecticides : C_0 =Control (No treatment), C_1 =DDT 0.25%, C_2 =BHC 0.05%, C_3 =Endrine 0.1%, C_4 =Folidol 0.05%, C_5 =Aldrin 0.1%, C_6 =Dieldrin 0.1%, C_7 =Rymania 0.5% and C_8 =Mechanical control.

3 sprayings given at 15 days intervals commencing from the early signs of appearance of the pest regulating the quantity of spray material used at 40 to 60 gallons/ac. according to the age of the crop.

3. DESIGN :

(i) R.B.D. (ii) (a) 9. (b) 99' \times 99'. (iii) 4. (iv) (a) and (b) 1/40 ac. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Early shoot borer incidence noticed and control measures—As per treatments. (iii) Cane yield. (iv) (a) 1957—contd. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 50.2 tons/ac. (ii) 7.0 tons/ac. (iii) Treatment differences are not significant. (iv) Av. yield of cane in tons/ac.

Treatment	C_0	C_1	C_2	C_3	C_4	C_5	C_6	C_7	C_8
Av. yield	49.6	48.7	49.7	50.1	46.6	54.1	55.7	45.1	52.1

S.E./mean = 3.5 tons/ac.

Crop :- Sugarcane.

Ref :- M. 59(103).

Site :- Central Sugarcane Res. Stn., Cuddalore.

Type :- 'D'.

Object :—To study the efficacy of different insecticides against the early shoot borer.

1. BASAL CONDITIONS :

(i) (a) Sugarcane—G.M.—Paddy. (b) Paddy. (c) 100 lb./ac. of N as A/S+G.L. 5 tons/ac. (ii) (a) Clayey loam. (b) Refer soil analysis, Cuddalore. (iii) 30.3.1959. (iv) (a) 5 ploughings. (b) N.A. (c) 15000 3-budded setts/ac. (d) 3.3' between rows. (e) N.A. (v) 5000 lb. of compost. (vi) CO—449. (vii) Irrigated. (viii) Weeding and earthing by once. (ix) 45.23". (x) 25.2.1960 to 3.3.1960.

2. TREATMENTS :

10 insecticides : C_0 =Control (no treatment), C_1 =DDT 0.25%, C_2 =BHC 0.05%, C_3 =Endrine 0.1%, C_4 =Gamma BHC, C_5 =Rymania 0.5%, C_6 =Folidol 0.5%, C_7 =Aldrin 0.1%, C_8 =Dieldrin 0.1% and C_9 =Mechanical control.

3. DESIGN :

(i) R.B.D. (ii) (a) 10. (b) 92.4' \times 165' (iii) 4. (iv) (a) 46.2' \times 33'. (b) 39.6' \times 26.4' (v) 3.3' allround (vi) Yes.

4. GENERAL :

(i) Good. (ii) Early shoot borer attack noticed. (iii) Cane yield. (iv) (a) 1957—1959. (b) and (c) No. (v) to (vii) Nil.

5. RESULTS :

(i) 45.19 tons/ac. (ii) 5.2 tons/ac. (iii) Treatment differences are not significant. (iv) Av. yield of cane in tons/ac.

Treatment	C_0	C_1	C_2	C_3	C_4	C_5	C_6	C_7	C_8	C_9
Av. yield.	40.2	43.2	44.2	45.0	41.6	50.1	51.2	42.1	50.2	44.1

S.E./mean = 2.6 tons/ac.

Crop :- Sugarcane.

Ref :- M. 59(82).

Site :- Central Sugarcane Res. Stn., Cuddalore.

Type :- 'D'.

Object :—To study the efficacy of Chemicals for controlling weeds in Sugarcane fields.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Casarina. (c) Nil. (ii) (a) Clayey loam. (b) Refer soil analysis, Cuddalore. (iii) 6.3.1959. (iv) (a) 5 ploughings. (b) Planting. (c) 15000 three-budded setts/ac. (d) 3.3' between rows. (e) N.A. (v) 250 lb./ac. of N as A/S and G.N.C. in 2 : 1 ratio in 2 doses 45 and 100 days after planting. (vi) CO—419 (late). (vii) Irrigated. (viii) As per treatments. (ix) 47.08". (x) 3.3.1960.

2. TREATMENTS :

1. Fernozone (2,4-D Sodium salt) at 3 lb./ac. in 100 gallons of water sprayed on the 5th day of planting.
2. Fernozone (2,4-D Sodium salt) at 3 lb./ac. in 100 gallons of water sprayed on the 5th and 25th day of planting.
3. M.C.P.A. at 10 lb./ac. in 100 gallons of water sprayed on 25 days after planting.
4. Sandoz Extra—A at 4 lb./ac. in 100 gallons of water sprayed on 25 days after planting.
5. Trash blanket—after 1 digging and 5 line weeding—Sugarcane trash spread 2" thick in between cane rows on ridges 45 days after planting.
6. 2 hoseings and 2 diggings as per local practice.

3. DESIGN :

- (i) R.B.D. (ii) (a) 6 (b) N.A. (iii) 6. (iv) (a) 33'×33'. (b) 26.4'×33'. (v) One row on either side of the plot. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Cane yield. (iv) (a) 1959—1962. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

- (i) 43.28 tons/ac. (ii) 3.29 to 15.12. (iii) Treatment differences are not significant. (iv) Av. yield of cane in tons/ac.

Treatment	1	2	3	4	5	6
Av. yield.	42.50	44.55	44.48	42.82	44.25	41.02
S.E./mean	= 1.3 tons/ac.					

Crop :- Cotton.**Ref :- M. 55(86).****Site :- Agri. Res. Stn., Aduthurai.****Type :- 'M'.**

Object :—To find out the optimum dose and time of application of A/S to Cotton raised rice fallows'

1. BASAL CONDITIONS :

(i) (a) Paddy—Cotton—Paddy. (b) Paddy. (c) 5000 lb./ac. of G.L.+150 lb./ac. of A/S+150 lb./ac. of Super. (ii) (a) Loamy. (b) Refer soil analysis, Aduthurai. (iii) 14.2.1955. (iv) (a) 3 ploughings. (b) to (e) N.A. (v) Nil. (vi) P—216 F (early). (vii) Irrigated. (viii) Weeding twice. (ix) 5.8". (x) 4.6.1955 to 20.7.1955.

2. TREATMENTS :

1. No manure.
2. 30 lb./ac. of N applied during 4th and 8th weeks after planting.
3. 45 lb./ac. of N applied during 4th and 8th weeks after planting.
4. 30 lb./ac. of N applied during 6th and 10th weeks after planting.
5. 45 lb./ac. of N applied during 6th and 10th weeks after planting.

3. DESIGN :

- (i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 6. (iv) (a) and (b) 0.73 cent. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Not satisfactory. (ii) Attack of jassids, aphids and boll-worms noticed. (iii) Yield of cotton. (iv) (a) 1955—1958. (b) No. (c) Nil. (v) Coimbatore, Palur. (vi) Nil. (vii) Expt. was conducted by Cotton Specialist, Coimbatore.

5. RESULTS :

- (i) 534 lb./ac. (ii) 71.9 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of *kapas* in lb./ac.

Treatment	1	2	3	4	5
Av. yield	472	523	561	595	517

S.E./mean = 29.3 lb./ac.

Crop :- Cotton.

Crop :- Cotton.**Ref :- M. 59(88).****Site :- Agri. Res. Stn., Palur.****Type :- 'M'.**

Object :—To find out the optimum dose and time of application of A/S to Cotton crop.

1. BASAL CONDITIONS :

- (i) (a) Nil. (b) Paddy. (c) G.L. at 5000 lb./ac.+A/S at 150 lb./ac.+Super at 150 lb./ac. (ii) (a) Clayey loam. (b) Refer soil analysis, Palur. (iii) 1.1.1959. (iv) (a) 3 ploughings. (b) and (c) N.A. (d) 2½'×6". (e) 2. (v) G.L. at 5000 lb./ac. (vi) MCU—1. (vii) Irrigated. (viii) Weeding twice. (ix) 10.5". (x) 24.4.1959 to 21.6.1959.

2. TREATMENTS :**Main-plot treatments :**

3 times of applications of N : T₁=Full dose at planting, T₂=½ at planting+½ six weeks later and T₃=½ at planting+½ four weeks+½ 8 weeks after planting.

Sub-plot treatments :

5 levels of N as A/S : N₀=0, N₁=30, N₂=45, N₃=60 and N₄=75 lb./ac.

3. DESIGN :

- (i) Split-plot. (ii) (a) 3 main-plots/block ; 5 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) 25'×12½'. (b) 20'×11½'. (v) 2½'×6" left as border. (vi) Yes.

2 TREATMENTS :

All combinations of (1), (2) and (3)+a control (no manure)

- (1) 2 levels of N as A/S : $N_1=30$ and $N_2=45$ lb./ac.
- (2) 2 levels of P_2O_5 : $P_0=0$ and $P_1=30$ lb./ac.
- (3) 2 levels of F.Y.M. : $F_0=0$ and $F_1=5000$ lb./ac.

3. DESIGN :

- (i) R.B.D. (ii) (a) 9. (b) N.A. (iii) 4. (iv) (a) $18' \times 8'$. (b) $13' \times 5'$. (v) $2\frac{1}{2}' \times 1\frac{1}{2}'$. (vi) Yes.

4. GENERAL :

- (i) Normal. (ii) Nil. (iii) *Kapas* yield. (iv) (a) 1955-1959. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

- (i) 880 lb./ac. (ii) 390 lb./ac. (iii) None of the effect is significant. (iv) Av. yield of *kapas* in lb./ac.

	N_1	N_2	P_0	P_1	Mean
F_0	750	966	892	824	858
F_1	1000	929	965	965	965
Mean	875	948	928	895	911
P_0	810	1046			
P_1	940	849			

$$\text{S.E. of any marginal mean} = 97.5 \text{ lb./ac.}$$

$$\text{S.E. of body of any table} = 137.9 \text{ lb./ac.}$$

Crop :- Cotton.

Ref :- M. 59(MAE).

Site :- M.A.E. Farm, Bhavanisagar.

Type :- 'M'.

Object :—Type II—To study the effect of applying N, P and K alone and in combination to Cotton and their interaction with F.Y.M.

1. BASAL CONDITIONS :

- (i) (a) Cotton—*Cholam*—Groundnut. (b) Groundnut. (c) As per treatments. (ii) (a) and (b) N.A. (iii) 18.9.1959. (iv) (a) 7 ploughings. (b) Dibbling. (c) 35 lb./ac. (d) $2' \times 6'$. (e) N.A. (v) Nil. (vi) MCU-1. (vii) Irrigated. (viii) Weeding and hoeing 5 times. (ix) N.A. (x) 5.2.1960 to 25.3.1960.

2. TREATMENTS :

All combinations of (1), (2), (3) and (4)

- (1) 3 levels of N : $N_0=0$, $N_1=30$, and $N_2=60$ lb./ac.
- (2) 3 levels of P_2O_5 : $P_0=0$, $P_1=30$ and $P_2=60$ lb./ac.
- (3) 3 levels of K_2O : $K_0=0$, $K_1=30$ and $K_2=60$ lb./ac.
- (4) 2 levels of F.Y.M. : $F_0=0$ and $F_1=5000$ lb./ac.

3. DESIGN :

- (i) $3^3 \times 2$ Fact. confd. (ii) (a) 9 plots/block ; 6 blocks/replication. (b) N.A. (iii) 1. (iv) (a) $36' \times 15'$. (b) $34' \times 13'$. (v) One row on one side and 2 plants on either end of the rows left. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (iii) Top-borer, jassids, aphids and bud-worms were noticed. (iii) *Kapas* yield. (iv) (a) 1957—contd. (b) Yes. (c) Nil. (v) (a) and (b) Nil. (vi) Due to heavy rains, growth was affected during early stage of the crop. (vii) Expt. was conducted by Agronomist, Coimbatore.

5. RESULTS :

- (i) 805.7 lb./ac. (ii) 140.8 lb./ac. (iii) N effect is highly significant, P effect is significant while other effects are not significant. (iv) Av. yield of grain in lb./ac.

	P ₀	P ₁	P ₂	K ₀	K ₁	K ₂	F ₀	F ₁	Mean

Crop :- Cotton.

Ref :- M. 55(87).

Site :- Cotton Breeding Stn., Coimbatore.

Type :- 'CIM'.

Object :—To study the effect of tillage, manures and irrigation on Cotton crop.

1. BASAL CONDITIONS :

- (i) (a) *Cholam*—Cotton—*Ragi*. (b) *Cholam*. (c) As per treatments. (ii) (a) Red loam. (b) Refer soil analysis, Coimbatore. (iii) 8.9.1955. (iv) (a) As per treatments. (b) and (c) N.A. (d) 2'×6". (e) N.A. (v) 5 tons/ac. of C.M. (vi) MCU—1 (medium). (vii) Irrigated. (viii) Hoeing, weeding and earthing up once. (ix) 7.39". (x) 9.5.1956.

2. TREATMENTS :**Strips in one direction :**

3 levels of irrigation : I₁=24, I₂=30 and I₃=36 acre-inches.

Strips in perpendicular direction :

All combinations of (1) and (2)

(1) 2 levels of ploughing : C₁=Shallow and C₂=Deep ploughing.

(2) 3 levels of manure : M₁=30 lb./ac. of N+30 lb./ac. of P₂O₅, M₂=60 lb./ac. of N+45 lb./ac. of P₂O₅+50 lb./ac. of K₂O and M₃=90 lb./ac. of N+60 lb./ac. of P₂O₅+50 lb./ac. of K₂O.

3. DESIGN :

- (i) Strip-plot. (ii) (a) 18. (b) N.A. (iii) 4. (iv) (a) 32'×13'. (b) 28'×11'. (v) 2'×11'. (vi) Yes.

4. GENERAL :

- (i) N.A. (ii) Crop failed due to incidence of pests. Folidol at 1 oz. in 2½ gallons of water was sprayed against mealy-bugs. (iii) Yield of *kapas*. (iv) (a) 1954—contd. (b) Yes. (c) Nil. (v) to (vi) Nil.

RESULTS :

- (i) 352 lb./ac. (ii) (a) 31.21 lb./ac. (b) 60.80 lb./ac. (c) 41.94 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of *kapas* in lb./ac.

	I ₁	I ₂	I ₃	M ₁	M ₂	M ₃	Mean
C ₁	358	345	382	381	367	336	362
C ₂	343	345	341	351	310	369	343
Mean	351	345	361	366	338	352	352
M ₁	361	366	372				
M ₂	342	337	336				
M ₃	349	332	376				

S.E. of difference of two

- 1. I marginal means = 9.0 lb./ac.
- 2. C marginal means = 14.3 lb./ac.
- 3. M marginal means = 17.6 lb./ac.
- 4. C means at the same level of I = 19.4 lb./ac.
- 5. I means at the same level of C = 20.0 lb./ac.
- 6. M means at the same level of I = 24.5 lb./ac.
- 7. I means at the same level of M = 15.1 lb./ac.

Crop :- Cotton.

Ref :- M. 54(16).

Site :- Agri. Res. Stn., Aduthurai.

Type :- 'D'.

Object :—To study the effect of fungicides in controlling boll-worm disease of Cotton.

1. BASAL CONDITIONS :

- (i) (a) Cotton—Paddy. (b) Paddy. (c) 5000 lb./ac. of G.L.+30 lb./ac. of P₂O₅ as Super+30 lb./ac. of N as A/S. (ii) (a) Clay soil. (b) Refer soil analysis, Aduthurai. (iii) 6.3.1954. (iv) (a) Ploughed twice. (b) to (e) N.A. (v) Top-dressing with A/S at 200 lb./ac. in two doses half at the time of 1st earthing and the rest a month later. (vi) P—216 F (early). (vii) Irrigated. (viii) Earthing up twice. (ix) 9.00". (x) 29.7.1954.

2. TREATMENTS :4 fungicides : F₀=Control (no spray), F₁=Ekatox 0.025%, F₂=Folidol 0.025% and F₃= BHC 0.1%.**3. DESIGN :**

- (i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 4. (iv) (a) 78'×48'. (b) 64'×34'. (v) 2 rows left as border. (vi) Yes.

4. GENERAL:

- (i) No lodging. (ii) Attack of boll-worm noticed—control measures as per treatments. (iii) Cotton yield and infestation count. (iv) (a) 1952—contd. (b) and (c) No. (v) (a) Coimbatore. (b) Nil. (vi) Nil. (vii) Expt. was conducted by Entomologist.

5. RESULTS :

- (i) 576 lb./ac. (ii) 139.2 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of *kapas* in lb./ac.

Treatment	F ₀	F ₁	F ₂	F ₃
-----------	----------------	----------------	----------------	----------------

Av. yield	515	565	600	625
-----------	-----	-----	-----	-----

S.E./mean = 69.6 lb./ac.

Crop :- Cotton.

Ref :- M 58(64).

Site :- Agri. Res. Stn., Bhavanisagar.

Type :- 'D'.

Object :—To study the effect of fungicides on Cotton crop.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Red gravelly loam. (b) N.A. (iii) 28.8.1959. (iv) (a) 2 to 3 ploughings. (b) Dibbling. (c) 15 to 20 lb./ac. (d) 2'×9". (e) 1. (v) 10 C.L./ac. of compost. (vi) MCU—1. (vii) Irrigated. (viii) Hoeing, weeding thrice and earthing up once. (ix) 9.1". (x) 4.2.1960 to 2.4.1960.

2. TREATMENTS :

10 fungicides : F_0 =Control, F_1 =Spergon, F_2 =Tillex, F_3 =Agrosan, F_4 =Agrosan 5w, F_5 =Ceremex, F_6 =Dout 9 B, F_7 =2% Ceresan, F_8 =Flit 406 and F_9 =Ceresan dry.

3. DESIGN:

(i) R.B.D. (ii) (a) 10. (b) N.A. (iii) 4. (iv) (a) $40' \times 12'$. (b) $36' \times 10\frac{1}{2}'$. (v) One row left alround. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) N.A. (iii) *Kapas* yield. (iv) (a) to (c) No. (v) to (vii) Nil.

5. RESULTS :

(i) 2332 lb./ac. (ii) 217.9 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of *kapas* in lb./ac.

Treatment	F_0	F_1	F_2	F_3	F_4	F_5	F_6	F_7	F_8	F_9
Av. yield	2384	2438	2206	2389	2458	2224	2175	2334	2285	2424
S.E./mean = 109 lb./ac.										

Crop :- Cotton.

Ref :- M. 54(29).

Site :- Agri. Res. Stn., Coimbatore.

Type :- 'D'.

Object:-To find out an effective insecticide for the control of spotted boll-worm of Cotton.

1. BASAL CONDITIONS :

(i) (a) No. (b) *Jowar*. (c) 5 tons/ac. of F.Y.M. (ii) (a) Loamy. (b) Refer soil analysis, Coimbatore. (iii) 2.9.1954. (iv) (a) to (e) N.A. (v) 10 tons/ac. of F.Y.M. and 200 lb./ac. of A/S. (vi) MCU—1. (vii) Irrigated. (viii) 5 weedings and 3 earthings. (ix) 16.29". (x) Jan. 1955 to April 1955.

2. TREATMENTS :

9 insecticides : I_0 =Control, I_1 =B.H.C. 10% dust, I_2 =B.H.C. 0.1% spray, I_3 =Aldrin 2.5% dust, I_4 =Aldrin 0.1% spray, I_5 =Dieldrin 2.5% dust, I_6 =Dieldrin 0.1% spray, I_7 =Folidol 0.025% spray and I_8 =Endrine spray (1 oz in $6\frac{1}{2}$ gallons.).

3. DESIGN :

(i) R.B.D. (ii) (a) 9. (b) N.A. (iii) 4. (iv) (a) $50' \times 20'$. (b) $40' \times 16'$. (v) 2 rows left as border. (vi) Yes.

4. GENERAL :

(i) Good growth. (ii) Slight incidence of boll-worm noticed—control measures as per treatments. (iii) Yield of *kapas* and infection count. (iv) (a) 1952—contd. (b) and (c) No. (v) (a) Aduthurai. (b) Nil. (vi) Nil. (vii) Expt. was conducted by Entomologist, Coimbatore.

5. RESULTS :

(i) 980 lb./ac. (ii) 235.5 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of *kapas* in lb./ac.

Treatment	I_0	I_1	I_2	I_3	I_4	I_5	I_6	I_7	I_8	
Av. yield	572	636	597	803	602	922	1508	1424	1758	
S.E./mean = 117.8 lb./ac.										

Crop :- Cotton.

Ref :- M. 54(31).

Site :- Agri. College & Res. Instt., Coimbatore.

Type :- 'D'.

Object:-To find out an effective insecticide for the control of spotted boll-worm of Cotton.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) *Jowar*. (c) 5 tons/ac. of F.Y.M. (ii) (a) Red loam. (b) Refer soil analysis, Coimbatore. (iii) 2.9.1954. (iv) (a) 3 ploughings and two *mummatty* hoeings. (b) to (e) N.A. (v) 10 tons/ac. of F.Y.M. + 200 lb./ac. of A/S. (vi) MCU—1 (medium). (vii) Irrigated. (viii) 5 weedings. (ix) 16.29". (x) January 1955 to April 1955.

2. TREATMENTS :

Same as in expt. no. 54(29) on page 393.

Treatments applied in three equal doses at 15 days interval from 6 weeks after sowing.

3. DESIGN :

(i) R.B.D. (ii) (a) 9. (b) N.A. (iii) 4. (iv) (a) $50' \times 20'$. (b) $40' \times 15'$. (v) 2 rows left on all sides. (vi) Yes.

4. GENERAL :

(i) No lodging; good growth. (ii) Attack of boll-worm was noticed—control measures as per treatments. (iii) *Kapas* yield and infection count. (iv) (a) 1952—contd. (b) and (c) No. (v) (a) Aduthurai. (b) Nil. (vi) Nil. (vii) Expt. was conducted by Entomologist, Coimbatore.

5. RESULTS :

(i) 699 lb./ac. (ii) 144.5 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of *kapas* in lb./ac.

Treatment	I ₀	I ₁	I ₂	I ₃	I ₄	I ₅	I ₆	I ₇	I ₈
Av. yield	731	586	668	715	501	430	637	855	1171

 nk = 20 lb./ac. of N as A/S + 30 lb./ac. of K_2O as Mur. Pot.
 pk = 30 lb./ac. of P_2O_5 as Super + 30 lb./ac. of K_2O as Mur. Pot.
 npk = 20 lb./ac. of N as A/S + 30 lb./ac. of P_2O_5 as Super + 30 lb./ac. of K_2O as Mur. Pot.

3. DESIGN :

(i) and (ii) The district has been divided into four agriculturally homogeneous zones and one field assistant posted in each zone. The field assistant conducts the trials in one Revenue circle or Thana in the zone and the circle/Thana is changed once in two years within the same zone. Each field assistant is required to conduct 31 trials in a year, 8 on a *Kharif* cereal, 8 on a *Rabi* cereal, 8 on cash crop, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of type A and the other half of type B on crops other than the legumes. The three trials on legumes are of type C. Residual effects of phosphate application are studied on type C trials in two out of the four zones in each district every year. The above experiments were laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village. (iii) (a) 1/20 ac. (b) 1/80 ac. (iv) Yes.

4. GENERAL :

Object :—To find out the effect of different dates of sowing on the yield of Groundnut.

1. BASAL CONDITIONS

(i) to (c) N.A. (ii) (a) Red gravelly loam. (b) N.A. (iii) As per treatments. (iv) (a) 2 to 3 ploughings. (b) N.A. (c) 80 lb./ac. (d) 9"×9". (e) 1. (v) 10 C.L./ac. of F.Y.M.+100 lb./ac. of A/S. (vi) TMV-2 (bunch, medium). (vii) Irrigated. (viii) Weeding, hoeing and earthing up once. (ix) N.A. (x) As per treatments.

2. TREATMENTS :

3 dates of sowing/harvesting : $D_1=1.9.1958/19.12.1958$, $D_2=15.9.1958/2.1.1959$ and $D_3=1.10.1958/16.1.1959$.

3. DESIGN and 4. GENERAL :

Same as in expt. no. 57(71) on page 404.

5. RESULTS :

(i) 482 lb./ac. (ii) 145.9 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of pod in lb./ac.

Treatment	D_1	D_2	D_3
Av. yield	568	531	346
S.E./mean = 59.6 lb /ac.			

Crop :- Groundnut.

Ref :- M. 58(52).

Site :- Agri. Res. Stn., Bhavanisagar.

Type :- 'C'.

Object :—To find out the effect of different dates of sowing on the yield of Groundnut.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Red gravelly loam. (b) N.A. (iii) As per treatments. (iv) (a) 2 to 3 ploughings. (b) N.A. (c) 120 lb./ac. (d) 6"×6". (e) 1. (v) 10 C.L./ac. of F.Y.M.+100 lb./ac. of A/S. (vi) TMV-2 (bunch, medium). (vii) Irrigated. (viii) Weeding, hoeing and earthing up once. (ix) N.A. (x) As per treatments.

2. TREATMENTS :

3 dates of sowing/harvesting : $D_1=15.12.1958/1.4.1959$, $D_2=1.1.1959/15.4.1959$ and $D_3=15.1.1959/30.4.1959$.

3. DESIGN and 4. GENERAL :

Same as in expt. no. 57(72) on page 405.

5. RESULTS :

(i) 585 lb./ac. (ii) 117.1 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of pod in lb./ac.

Treatment	D_1	D_2	D_3
Av. yield	536	483	736
S.E./mean = 39.0 lb./ac.			

Crop :- Groundnut.

Crop :- Groundnut.**Ref :- M. 54(13).****Site :- Agri. Res. Stn., Tindivanam.****Type :- 'C'.**

Object :—To determine the best method of preparatory cultivation for Groundnut crop.

1. BASAL CONDITIONS :

(i) (a) Groundnut—Castor. (b) Castor. (c) Manure mixture of red-earth, tank silt and compost in 1 : 1 : 1 proportion at 20 C.L./ac. (ii) (a) Red loam. (b) Refer soil analysis, Tindivanam. (iii) 27.7.1954. (iv) (a) As per treatments. (b) to (e) N.A. (v) Same as in (i) (c) above. (vi) TMV—3 (spreading, late). (vii) Unirrigated. (viii) Hoeing, weeding and thinning twice. (ix) 26.42". (x) 24.12.1954.

2. TREATMENTS :

9 methods of preparatory cultivation : M₁=Country plough twice, M₂=Country plough 4 times, M₃=Country plough 6 times, M₄=Mould board plough 2 times, M₅=Mould board plough 4 times, M₆=Mould board plough

once + Junior hoe twice, M₇=Mould board plough once + Junior hoe 4 times, M₈=Mould board plough twice + Junior hoe twice and M₉=Mould board plough twice and Junior hoe 4 times.

3. DESIGN :

- (i) R.B.D. (ii) (a) 9. (b) N.A. (iii) 4. (iv) (a) 82'×12'. (b) 66'×6'. (v) 8'×3'. (vi) Yes.

4. GENERAL :

- (i) Not satisfactory. (ii) *Surul poochi* attack was severe during the period of drought—controlled by dusting DDT 5%. (iii) Flower count and pod yield. (iv) (a) 1948—1956. (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

- (i) (a) 228 lb./ac. (ii) 46.6 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of pod in lb./ac.

Treatment	M ₁	M ₂	M ₃	M ₄	M ₅	M ₆	M ₇	M ₈	M ₉
Ay. yield	229	236	212	229	209	199	269	222	249
S.E./mean = 23.3 lb./ac.									

Crop :- Groundnut.

Ref :- M. 55(9).

Site :- Agri. Res. Stn., Tindivanam.

Type :- 'C'.

Object :—To determine the best method of preparatory cultivation for Groundnut crop.

1. BASAL CONDITIONS :

- (i) (a) Nil. (b) Groundnut. (c) Manure mixture of red earth, tank silt and compost in 1:1:1 proportion at 20 C.L./ac. (ii) (a) Red loam. (b) Refer soil analysis, Tindivanam. (iii) 24.7.1955. (iv) (a) As per treatments. (b) to (e) N.A. (v) Manure mixture as in (i) (c) above applied by broadcast 3 weeks before sowing. (vi) TMV—3 (spreading, late). (vii) Unirrigated. (viii) Sown with the help of sowing rods; hoeing and weeding twice. (ix) 27.38". (x) 19.12.1955.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 54(13) on page 414.

5. RESULTS :

- (i) 596 lb./ac. (ii) 119.6 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of groundnut in lb./ac.

Treatment	M ₁	M ₂	M ₃	M ₄	M ₅	M ₆	M ₇	M ₈	M ₉
Av. yield	602	580	543	549	555	595	697	594	648
S.E./mean = 59.8 lb./ac.									

Crop :- Groundnut.

Ref :- M. 56(13).

Site :- Agri. Res. Stn., Tindivanam.

Type :- 'C'.

Object :—To determine the best method of preparatory cultivation for Groundnut crop.

1. BASAL CONDITIONS :

- (i) (a) Groundnut—Castor. (b) Castor. (c) Manure mixture of red earth, tank silt and compost in 1:1:1 proportion at 20 C.L./ac. (ii) (a) Red loam. (b) Refer soil analysis, Tindivanam. (iii) 12.8.1956. (iv) (a) As per treatments. (b) N.A. (c) 100 lb./ac. (d) 9"×9". (e) 1. (v) B.D. as in (i) (c) above applied by broadcast a fortnight before sowing. (vi) TMV—3 (spreading, late). (vii) Unirrigated. (viii) Hoeing and weeding twice. (ix) 34.24". (x) 31.12.1956.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 54(13) on page 414.

5. RESULTS:

(i) 288 lb./ac. (ii) 124.4 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of groundnut in lb./ac.

Treatment	M ₁	M ₂	M ₃	M ₄	M ₅	M ₆	M ₇	M ₈	M ₉
Av. yield	261	360	304	268	330	328	272	229	243

S.E./mean = 62.2 lb./ac.

Crop :- Groundnut.

Ref :- M. 57(9).

Site :- Agri. Res. Stn., Tindivanam.

Type :- 'C'.

Object :—To determine the best method of preparatory cultivation for Groundnut crop.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Groundnut. (c) 20 C.L./ac. of manure mixture of red earth, tank silt and compost in 1 : 1 : 1 proportion. (ii) (a) Red loam. (b) Refer soil analysis, Tindivanam. (iii) 1.8.1957. (iv) (a) As per treatments. (b) N.A. (c) 80 lb./ac. (d) 1'×4". (e) 1. (v) Same as in (i) (c) above applied 10 days before sowing. (vi) TMV—3 (spreading, late). (vii) Unirrigated. (viii) N.A. (ix) 21.87°. (x) 30.12.1957.

2. TREATMENTS :

Main-plot treatments :

All combinations of (1) and (2)

(1) 2 types of ploughs : T₁=Country plough and T₂=Mould board plough.

(2) No. of ploughings : C₁=4 and C₂=8 ploughings.

Sub-plot treatments :

Frequency of working *danthi* : W₁=twice and W₂=4 times.

3. DESIGN :

(i) Split-plot. (ii) (a) 4 main-plots/block ; 2 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) Main-plot : 70'×40½'. Sub-plot : 70'×19½'. (b) 70'×18'. (v) One row on either side left. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Flower counts and pod yield. (iv) (a) 1957—1959. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

(i) 727 lb./ac. (ii) (a) 149.0 lb./ac. (b) 52.7 lb./ac. (iii) W effect alone is significant. (iv) Av. yield of pod in lb./ac.

	T ₁	T ₂	C ₁	C ₂	Mean
W ₁	805	715	752	768	760
W ₂	699	687	681	706	693
Mean	752	701	716	737	727
C ₁	713	720			
C ₂	791	682			

S.E. of difference of two

1. T or C marginal means = 52.7 lb./ac.
2. W marginal means = 22.8 lb./ac.
3. W means at the same level of T or C = 64.4 lb./ac.
4. T or C means at the same level of W = 57.4 lb./ac.

Crop :- Groundnut.**Ref :- M. 58(12).****Site :- Agri. Res. Stn., Tindivanam.****Type :- 'C'.**

Object :—To determine the best method of preparatory cultivation for Groundnut crop.

1. BASAL CONDITIONS :

(i) (a) Groundnut—Groundnut. (b) Groundnut. (c) 20 C.L./ac. of manure mixture of red-earth, compost and tank silt in 1 : 1 : 1 proportion. (ii) (a) Red loamy. (b) Refer soil analysis, Tindivanam. (iii) 9.8.1958. (iv) (a) As per treatments. (b) N.A. (c) 80 lb./ac. (d) 18"×4". (e) 1. (v) 20 C.L./ac. of manure mixture of red-earth, tank silt and compost in 1 : 1 : 1 proportion applied 12 days before sowing and incorporated during the last ploughing. (vi) TMV—3 (spreading, late). (vii) Unirrigated. (viii) Intercultivated with *danthi*s as per treatments. (ix) 28.59". (x) 29.12.1958.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 57(9) on page 416.

4. GENERAL :

(i) Fair. (ii) Severe attack of *Surul poochi*; controlled by dusting DDT 5%. (iii) Flower count and pod yield. (iv) (a) 1957—1960. (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 728 lb./ac. (ii) (a) 50.98 lb./ac. (b) 64.99 lb./ac. (iii) Main effects of T and W and interactions T×C and T×W are highly significant. (iv) Av. yield of pod in lb./ac.

	T ₁	T ₂	C ₁	C ₂	Mean
W ₁	807	717	755	769	762
W ₂	701	689	682	708	695
Mean	754	703	718	739	728

Object :—To determine the optimum spacing to be adopted for irrigated Groundnut.

1. BASAL CONDITIONS :

- (i) (a) Nil. (b) Gingelly. (c) 15 C.L./ac. of compost. (ii) (a) Light clayey loam. (b) Refer soil analysis, Tindivanam. (iii) 9.4.1955. (iv) (a) Ploughing twice with Cooper—11 plough. (b) N.A. (c) 80 lb./ac. (d) As per treatments. (e) 1. (v) 10,000 lb./ac. of C.M. applied to the field 10 days before sowing. (vii) TMV—4 (spreading, late). (viii) Hoeing and weeding twice. (ix) 27.59". (x) 15.9.1955.

2. TREATMENTS :

Same as in expt. no. 54(11) on page 419.

3. DESIGN :

- (i) R.B.D. (ii) (a) and (b) 5. (iii) 5. (iv) (a) and (b) Same as in expt. no. 54(11) on page 419. (v) Outer rows left. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Groundnut yield. (iv) (a) 1953—1957. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

- (i) 633 lb./ac. (ii) 131.9 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of pod in lb./ac.

Treatment	S ₁	S ₂	S ₃	S ₄	S ₅
Av. yield	748	613	622	616	565
S.E./mean = 59.0 lb./ac.					—

Crop :- Groundnut.**Ref :- M. 56(14).****Site :- Agri. Res. Stn., Tindivanam.****Type :- 'C'.**

Object :—To determine the optimum spacing to be adopted for irrigated Groundnut.

1. BASAL CONDITIONS :

- (i) (a) Nil. (b) Gingelly. (c) 15 C.L./ac. of compost. (ii) (a) Light clayey loam. (b) Refer soil analysis, Tindivanam. (iii) 13.3.1956. (iv) (a) Ploughing thrice with Cooper—11 plough. (b) N.A. (c) 80 lb./ac. (d) As per treatments. (e) 1. (v) 10,000 lb./ac. of C.M. was applied a fortnight before sowing and incorporated by ploughing. (vi) TMV—4 (spreading, late). (vii) Irrigated. (viii) Weeding once. (ix) 7.30". (x) 25.7.1956.

2. TREATMENTS :

Same as in expt. no. 54(11) on page 419.

3. DESIGN :

- (i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 5. (iv) (a) Varying from plot to plot. (b) 30'×15'. (v) One row left as border. (vi) Yes.

4. GENERAL :

(i) Fair. (ii) Nil. (iii) Flower count and pod yield. (iv) (a) 1953—1957. (b) No. (c) Nil. (v) to (vii) Nil

5. RESULTS :

(i) 578 lb./ac. (ii) 207.7 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of pod in lb./ac

Treatment	S ₁	S ₂	S ₃	S ₄	S ₅
Av. yield	862	633	444	501	448

$$\text{S.E./mean} = 92.9 \text{ lb./ac.}$$

Crop :- Groundnut.**Ref :- M. 57(7).****Site :- Agri. Res. Stn., Tindivanam.****Type :- 'C'.**

S.E. of body of any table	= 39.1 lb./ac.

Crop :- Castor.**Ref. :- M. 56(12).****Site :- Agri. Res. Stn., Tindivanam.****Type :- 'M'.**

Object :—To determine the effect of N, P and K alone and in combinations on the yield of Castor.

1. BASAL CONDITIONS :

(i) (a) Castor—Groundnut. (b) Groundnut. (c) Manure mixture (Red earth+ tank silt+compost) at 20 C.L./ac. (ii) (a) Red loamy soil. (b) N.A. (iii) 14.8.1956. (iv) (a) Ploughing with Cooper—11 thrice and 2 hoeings with junior hoe. (b) N.A. (c) 8 to 10 lb./ac. (d) 3'×3'. (e) 1. (v) Nil. (vi) TMV—2 (late). (vii) Unirrigated. (viii) 1 weeding. (ix) 34.28". (x) 20.12.1956 to 18.3.1957.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 54(3) on page 426.

4. GENERAL :

(i) Fair, yield was poor due to abnormal weather. (ii) Nil. (iii) Yield of castor and plant height. (iv) (a) 1954—1956. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS:

(i) 160.0 lb./ac. (ii) 26.0 lb./ac. (iii) N effect is highly significant. P effect and interaction N×K are significant. (iv) Av. yield of seed in lb./ac.

	N ₀	N ₁	Mean	K ₀	K ₁

Object :—To find out the effect of different spacings on Gingelly crop.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Red gravelly loam. (b) N.A. (iii) 13.1.1959. (iv) (a) 2 to 3 ploughings. (b) and (c) N.A. (d) As per treatments. (e) N.A. (v) 10 C.L./ac. of compost. (vi) TMV-3. (vii) Irrigated. (viii) Weeding and hoeing once. (ix) 1.57". (x) 19.4.1959.

2. TREATMENTS :

Same as in expt. no. 55(70) on page 434.

3. DESIGN and 4. GENERAL :

Same as in expt. no. 58(59) on page 435.

5. RESULTS:

(i) 43 lb./ac. (ii) 20 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of seed in lb./ac.

Treatment	S ₁	S ₂	S ₃	S ₄	S ₅
Av. yield	42	56	40	37	40
S.E./mean = 8.2 lb./ac.					

Crop :- Gingelly.

Ref :- M. 54(18).

Site :- Agri. College and Res. Instt., Coimbatore.

Type :- 'C'.

Object:—To determine the optimum time of sowing of summer crop of Gingelly.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Groundnut. (c) Compost at 6½ tons/ac. (ii) (a) Clayey loam. (b) Refer soil analysis, Coimbatore. (iii) As per treatments. (iv) (a) One ploughing with mould board plough, one with country plough and levelling. (b) Dibbling in lines. (c) 4 to 5 lb./ac. (d) 1'×1'. (e) N.A. (v) 4 tcns/ac. of well decomposed F.Y.M. applied broadcast and ploughed in with country plough on 28.1.1954. (vi) TMV-3 (improved). (vii) Irrigated. (viii) Hand hoeing and weeding thrice. (ix) 9.69". (x) N.A.

2. TREATMENTS :

6 dates of sowing : D₁=First fortnight of February (10.2.1954), D₂=Second fortnight of February (25.2.1954), D₃=First fortnight of March (10.3.1954), D₄=Second fortnight of March (25.3.1954). D₅=First fortnight of April (10.4.1954) and D₆=Second fortnight of April (25.4.1954).

3. DESIGN :

(i) R.B.D. (ii) (a) 6. (b) N.A. (iii) 6. (iv) (a) 22'×6'. (b) 18'×4'. (v) One row along the length and two rows along breadth. (vi) Yes.

4. GENERAL :

(i) Crop sown in late March and April was comparatively poor. (ii) Incidence of the shoot-webber and Gall fly attack severe in the later sowings. Three dustings, one spraying of BHC 5% given to control the shoot-webber pest. (iii) Branching, length of stem and bunches, no. of capsules, period of 1st. and last flowering, no. of flowers produced and yield of seed. (iv) (a) 1952 -1954. (b) and (c) No. (v) to (vii) Nil.

5. RESULTS :

(i) 393.6 lb./ac. (ii) 88.98 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of seed in lb./ac.

Treatment	D ₁	D ₂	D ₃	D ₄	D ₅	D ₆
Av. yield	648.6	600.6	469.1	317.8	266.8	58.7
S.E./mean = 36.3 lb./ac.						

Crop :- Gingelly.

Ref :- M. 54(72).

Site :- Agri. Res. Stn., Tindivanam.

Type :- 'C'.

Object:—To determine the optimum cultural operations required for Gingelly raised under irrigated conditions.

1. BASAL CONDITIONS :

(i) (a) N.A. (b) Paddy. (c) 5 tons/ac. of F.Y.M. (ii) (a) Light clay. (b) Refer soil analysis, Tindivanam. (iii) 25.3.1954. (iv) (a) As per treatments. (b) Dibbling. (c) 4 lb./ac. (d) 1'×1'. (e) 1. (v) 5 tons/ac. of F.Y.M. (vi) Ploughed in at the time of last ploughing. (vii) Irrigated. (viii) Hoeing and weeding with manual labour. (ix) 9.06". (x) 15.6.1954.

2. TREATMENTS :

1. Ploughing with country plough twice.
2. Ploughing with country plough four times.
3. Ploughing with country plough six times.
4. Ploughing with mould board plough twice.
5. Ploughing with mould board plough four times.
6. Ploughing with mould board plough twice and junior hoe twice.
7. Ploughing with mould board plough twice and junior hoe four times.

3. DESIGN :

(i) R.B.D. (ii) (a) 7. (b) N.A. (iii) 4. (iv) (a) 37'×10', (b) 33'×6'. (v) Two rows left as border. (vi) Yes.

4. GENERAL :

(i) Fair. (ii) Moderate attack of shoot-webber; controlled by dusting DDT 5%. (iii) Plant height measurements, flower count and gingelly yield. (iv) (a) 1954—1959. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 295 lb./ac. (ii) 78.0 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of seed in lb./ac.

Treatment	1	2	3	4	5	6	7
Av. yield	294	232	273	344	369	293	259

S.E./mean = 39.0 lb./ac.

Crop :- Groundnut.**Ref :- M. 54(103).****Site :- Agri. Res. Stn., Tindivanam.****Type :- 'R'.**

Object :—To find out the effect of introducing legumes in crop rotation with Groundnut.

1. BASAL CONDITIONS :

(i) (a) As per treatments. (b) Groundnut. (c) 15 C.L./ac. of manure mixture, red-earth, tank silt and compost in equal proportions. (ii) (a) Red loamy. (b) Refer soil analysis, Tindivanam. (iii) 1.8.1954, 25.8.1955 and 28.8.1956. (iv) to (viii) Refer table on page 454*. (ix) About 27", 14" to 22" and 19" to 32.5" in 1954, 1955 and 1956 respectively. (x) Groundnut : 24.12.1954, 15.1.1956 and 12.1.1957 ; Cholam : 3.1.1955, 12.1.1956 and 25.1.1957 ; Red gram : 12.1.1955, 6.2.1956 and 12.2.1957 ; Castor : 1.4.1955, 17.4.1956, 5.2.1957 ; Lab-lab : 12.4.1955, 4.5.1956 and 16.4.1957 ; Cotton : 13.4.1955, 3.5.1956 and 20.3.1957 ; Horse gram : 3.1.1955, 26.1.1956 and 5.2.1957 ; Gingelly : 16.11.1954, 10.12.1955 and failed ; Cowpea : 17.11.1954, 24.1.1956 and 4.1.1957 ; Sannhemp : 29.10.1954, 18.11.1955 and 22.10.1956 and Green gram : 23.12.1954, 3.11.1955 and failed. Wild indigo failed in all the years.

2. TREATMENTS :

9 four course rotational treatments with all the 4 phases in the sub-plots.

Main-plot treatments :

	I Year	II Year	III Year	IV Year
1.	Cotton	Green gram	Cholam	Sannhemp and Cowpea.
2.	Cotton	Horse gram	Cholam	—do—
3.	Cotton	Red gram	Cholam	—do—
4.	Cotton	Groundnut	Cholam	—do—
5.	Gingelly and Red gram	Cowpea	Cotton	—do—
6.	Gingelly and Wild indigo	Cholam	Cotton	—do—
7.	Castor and Lab-lab	Cholam and Cowpea	Cotton	—do—
8.	Cholam and Cowpea	Gingelly and Cotton	Castor and Lab-lab	—do—
9.	Cholam and Gingelly	Cotton	—do—	Sannhemp, Cowpea and Red gram.

3. DES.GN.:

(i) Split-plot. (ii) (a) 9 main-plots/block ; 4 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) and (b) 18'×16'. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Gingelly and wild indigo failed completely. (ii) *Surul poochi* in groundnut, pod borer in red gram and lab-lab, jassid in cotton and semi-looper in castor. (iii) *Kapas*, pod, grain and fodder yields. (iv) (a) 1954—1956. (b) Yes. (c) Nil. (v) to (vi) Nil. (vii) Analysis was done as R.B.D.

5. RESULTS :

1954

I Cotton.

(i) 54.4 lb./ac. (ii) 31.2 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of *kapas* in lb./ac.

452

Treatment	1	2	3	4	5	6	7	8	9
Av. yield	89.2	39.6	45.2	76.3	48.7	77.2	49.1	16.1	48.6

S.E./mean = 15.6 lb./ac.

II Cholam.

(i) 1314 lb./ac. (ii) 407.5 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	1	2	3	4	6	7	8	9
Av. yield	1401	1472	1520	1855	1238	1342	862	824

S.E./mean = 203.7 lb./ac.

III Sannhemp.

(i) 10008 lb./ac. (ii) 1978 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of fodder in lb./ac.

Treatment	1	2	3	4	5	6	7	8	9
Av. yield	10739	9302	12138	9718	9982	9869	8621	10663	9037

S.E./mean = 989 lb./ac.

IV Cowpea.

(i) 19.53 lb./ac. (ii) 17.0 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of cowpea in lb./ac.

Treatment	1	2	3	4	5	6	7	8	9
Av. yield	16.26	17.84	20.84	31.59	20.96	19.42	7.80	27.30	13.75

S.E./mean (treatments 1, 2, 3, 4, 6, 9) = 8.5 lb./ac.

S.E./mean (treatments 5, 7, 8) = 6.0 lb./ac.

V Red gram.

(i) 644.0 lb./ac. (ii) 160.4 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of red gram in lb./ac.

Treatment	3	5	9
Av. yield	731.9	610.2	589.8

S.E./mean = 80.2 lb./ac.

VI Castor.

(i) 266.1 lb./ac. (ii) 146.6 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of castor in lb./ac.

Treatment	7	8	9
Av. yield	261.3	270.1	266.9

S.E./mean = 73.3 lb./ac.

VII Lab-lab.

(i) 727.1 lb./ac. (ii) 263.1 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of lab-lab in lb./ac.

Treatment	7	8	9
Av. yield	744.4	713.6	723.2

S.E./mean = 131.6 lb./ac.

1955

I Cotton.

(i) 26.3 lb./ac. (ii) 14.6 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of *kapas* in lb./ac.

Treatment	1	2	3	4	5	6	7	8
Av. yield	30.4	20.0	36.7	23.3	20.8	26.3	38.8	8.8

S.E./mean = 7.3 lb./ac.

II Cholam.

(i) 943 lb./ac. (ii) 452.2 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of cholam in lb./ac.

Treatment	1	2	3	4	6	7	8	9
Av. yield	954	730	1464	773	858	1304	788	675

S.E./mean = 226.1 lb./ac.

S.E./mean = 96.7 lb./ac.

III Sannhemp

(i) 8852 lb./ac. (ii) 2366 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of fodder in lb./ac.

Treatment	1	2	3	4	5	6	7	8	9
Av. yield	9340	8999	8886	12365	7827	7865	8470	8697	7222

S.E./mean = 1183 lb./ac.

IV Cowpea.

(i) 71.1 lb./ac. (ii) 30.7 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of cowpea in lb./ac.

Treatment	1	2	3	4	5	6	7	8	9
Av. yield	92.1	10.4	67.1	65.0	56.5	103.8	97.5	79.8	67.5

S.E./mean (treatments 1, 2, 3, 4, 6, 9) = 15.4 lb./ac.

S.E./mean (treatments 5, 7, 8) = 10.9 lb./ac.

V Red gram.

(i) 123 lb./ac. (ii) 81.8 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of red gram in lb./ac.

Treatment	3	5	9
Av. yield	160	142	66

S.E./mean = 40.9 lb./ac.

VI Castor.

(i) 61.6 lb./ac. (ii) 167.6 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of castor in lb./ac.

Treatment	7	8	9
Av. yield	64.4	40.8	79.6

S.E./mean = 83.8 lb./ac.

VII Lab-lab.

(i) 73.9 lb./ac. (ii) 229.6 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of lab-lab in lb./ac.

Treatment	7	8	9
Av. yield	76.7	41.7	103.4

S.E./mean = 114.8 lb./ac.

*Reference for item no. (iv) to (viii) of Basal Conditions for expt. no. 54(103) on page 451.

Crop	Method of sowing	Variety	Seed rate	No. of hoeings and weedings
Groundnut	Dibbled in holes 9" apart either way.	TMV-3	80 lb./ac.	Twice
Cholam	Sown in lines 18" apart and thinned to 8" in the row.	CO-19	15 lb./ac.	Thrice
Red gram	Dibbling in holes 6' apart with 3' within the row.	S.A.-1	4 lb./ac.	Twice
Castor	Dibbling in holes 3' either way.	TMV-2	7 lb./ac.	Twice
Lab-lab	Dibbling in holes 3' apart with 1' within the row.	D.S. 231	12 lb./ac.	Twice
Cotton	Dibbling in holes 1½' apart with 6' within the row.	P 216-F	10 lb./ac.	Twice
Horse gram	Broadcast.	Local	20 lb./ac.	Twice
Gingelly	—do—	TMV-1	6 lb./ac.	Twice
Cowpea	—do—	CO-419	12 lb./ac.	Twice
Sannhemp	—do—	Local	15 lb./ac.	Once
Green gram	—do—	Local	8 lb./ac.	Once

3 ploughings with Cooper-11 and working junior hoe twice uniformly in all plots. The field is unirrigated

Crop :- Groundnut, Redgram, Cholam, Castor, Ref :- M. 57 to 59(68).
Lab-lab, Cotton and Sannhemp.

Site :- Agri. Res. Stn., Tindivanam.

Type :- 'R'.

Object :—To find out the effect of introduction of a legume in crop rotation with groundnut and other crop.

1. BASAL CONDITIONS :

(i) (a) As per treatments. (b) N.A. (c) 15 C.L./ac. of manure mixture. (ii) (a) Red loamy. (b) Refer soil analysis, Tindivanam. (iii) 2.8.1957, 11.8.1958 and 26.8.1959 for all excepting sannhemp. Sannhemp on 10.1.1958, 6.2.1959 and 4.2.1960. (iv) to (viii) Refer to table on page 458.* (ix) 27° in 1957, 33° in 1958 and 30° in 1959. (x) Groundnut : 8.1.1958, 24.12.1958, 8.1.1960 ; Redgram : 4.2.1958, 20.1.1959, 15.1.1960 ; Cholam : 8.1.1958, 27.12.1958, 7.1.1960 ; Castor : [6.3.1958, 17.2.1959, 20.4.1960 ; Lab-lab, 16.3.1958, 22.2.1959, 10.3.1960 ; Cotton : 16.3.1958, 22.2.1959 and 26.3.1960 ; Sannhemp : 6.3.1958, failed, failed.

2. TREATMENTS :

Main-plot Treatments :

6 three course rotations with all the 3 phases in sub-plots.

I Year	II Year	III Year
1. Cotton	Groundnut	Cholam and Sannhemp.
2. Cotton	Redgram	Cholam and Sannhemp.
3. Castor and Lab-lab	Groundnut	Cholam and Sannhemp.
4. Castor and Lab-lab	Redgram	Cholam and Sannhemp.
5. Castor and Lab-lab	Groundnut	Cotton
6. Castor and Lab-lab	Redgram	Cotton

3. DESIGN :

(i) Split-plot. (ii) (a) 6 main-plots/block ; 3 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) and (b) 24'×18'. (v) Nil. (vi) Yes.

4. GENERAL:

(i) The yield in general of all the crops was poor due to drought. (ii) Wild attack on cotton and pod-borer on lab-lab in 1957. *Surul poochi* in groundnut, semi-looper in castor, wilt and jassids in cotton in 1958 and 1959. (iii) *Kapas*, pod, grain and fodder yields. (iv) (a) 1957—1959. (b) Yes. (c) Nil. (v) to (vi) Nil. (vii) Analysis was done as R.B.D.

5. RESULTS :

1957 I Cotton.

(i) 36.2 lb./ac. (ii) 1.8 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of *kapas* in lb./ac.

Treatment	1	2	5	6
Av. yield	37.8	36.0	35.4	35.6

S.E./mean = 0.9 lb./ac.

II Groundnut.

(i) 323.0 lb./ac. (ii) 219.6 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of groundnut in lb./ac. .

Treatment	1	2	3
Av. yield	270.8	405.3	293.0

S.E./mean = 109.8 lb./ac.

III Cholam.

(i) 893 lb./ac. (ii) 141.3 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of *cholam* in lb./ac.

Treatment	1	2	3	4
Av. yield	874	854	1017	828

S.E./mean = 70.6 lb./ac.

IV Red gram.

(i) 590.8 lb./ac. (ii) 257.4 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of red gram in lb./ac.

Treatment	2	4	6
Av. yield	502.3	632.3	637.7

S.E./mean = 128.7 lb./ac.

V Castor

(i) 182.0 lb./ac. (ii) 80.2 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of castor in lb./ac.

Treatment	3	4	5	6
Av. yield	250.0	166.5	174.6	137.0

S.E./mean = 40.1 lb./ac.

VI Lab-lab.

(i) 84.4 lb./ac. (ii) 51.5 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of lab-lab in lb./ac.

Treatment	3	4	5	6
Av. yield	93.1	79.2	77.3	88.0

S.E./mean = 25.8 lb./ac.

1958

I Cotton.

(i) 146.8 lb./ac. (ii) 33.9 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of *kapas* in lb./ac.

Treatment	1	2	5	6
Av. yield	144.6	116.9	172.9	152.6

S.E./mean = 17.0 lb./ac.

II Groundnut.

(i) 386.1 lb./ac. (ii) 56.8 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of groundnut in lb./ac.

Treatment	1	3	5
Av. yield	412.6	360.3	385.3

S.E./mean = 28.4 lb./ac.

III Cholam.

(i) 833 lb./ac. (ii) 240.4 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of *cholam* in lb./ac.

Treatment	1	2	3	4
Av. yield	895	741	750	945

S.E./mean = 120.2 lb./ac.

IV Red gram.

(i) 719 lb./ac. (ii) 192.6 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of red gram in lb./ac.

Treatment	2	4	6
Av. yield	723	760	673

S.E./mean = 96.3 lb./ac.

V Castor.

(i) 296 lb./ac. (ii) 141.2 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of castor in lb./ac.

Treatment	3	4	5	6
Av. yield	410	286	305	184

S.E./mean = 70.6 lb./ac.

VI Lab-lab

(i) 301 lb./ac. (ii) 84.8 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of lab-lab in lb./ac.

Treatment	3	4	5	6
Av. yield	310	270	318	305

S.E./mean = 42.4 lb./ac.

1959

I Cotton.

(i) 106.1 lb./ac. (ii) 55.26 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of *kapas* in lb./ac.

Treatment	1	2	5	6
Av. yield	122.9	108.7	73.4	119.6

S.E./mean = 27.6 lb./ac.

II Groundnut.

(i) 493 lb./ac. (ii) 164.8 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of groundnut in lb./ac.

Treatment	1	3	5
Av. yield	506	546	428

S.E./mean = 82.4 lb./ac.

III Cholam.

(i) 1760 lb./ac. (ii) 291.2 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of *cholam* in lb./ac.

Treatment	1	2	3	4
Av. yield	1634	1592	1898	1915

S.E./mean = 145.6 lb./ac.

IV Red gram.

(i) 273.6 lb./ac. (ii) 110.3 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of red-gram in lb./ac.

Treatment	2	4	6
Av. yield	320.5	268.3	232.1

S.E./mean = 55.2 lb./ac.

V Castor.

(i) 370 lb./ac. (ii) 154.7 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of castor in lb./ac.

Treatment	3	4	5	6
Av. yield	330	439	386	326

S.E./mean = 77.4 lb./ac.

VI Lab-lab.

(i) 195.7 lb./ac. (ii) 59.4 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of lab-lab in lb./ac.

Treatment	3	4	5	6
Av. yield	230.7	181.5	156.5	214.3

S.E./mean = 29.7 lb./ac.

Crop :- As per rotations.**Ref :- M. 1955 to 57(N.A.).****Site :- Agri. Res. Stn., Koilpatti.****Type :- 'R'.**

Object :- To find out the role of legumes in crop rotation in rainfed areas of the tract for increasing soil fertility.

1. BASAL CONDITIONS :

(i) (a) to (c) As per treatments. (ii) (a) Black. (b) Refer soil analysis, Koiipatti. (iii) 6.11.1955, 12.10.1956 and 25.10.1957. (iv) (a) One ploughing with Victory plough. Intercultivation with *dantube*. (b) to (e) N.A. (v) Nil. (vi) 1955—18.54°; 1956—26.87°; 1957—25.53°. (vii) Unirrigated. (viii) Two or three weedings according to the presence of weeds. (ix) Cotton—K₂, Groundnut—TMV—2, Horsegram—DB-35; *Cumbu*—K', Blackgram—local. (x) 6.2.1956 to 20.3.1956; 14.2.1957 to 23.2.1957 and 16.1.1958 to 9.4.1958.

2. TREATMENTS :

All phases of the 4 rotations

1. Cotton—*Cumbu*—Cotton—*Cumbu*.
2. Cotton—*Cumbu*—Cotton—Blackgram.
3. Cotton—*Cumbu*—Cotton—Groundnut.
4. Cotton—*Cumbu*—Cotton—Horsegram.

3. DESIGN :

- (i) R.B.D. (ii) (a) 16. (b) N.A. (iii) 4. (iv) (a) 40'×18'. (b) 34'×12'. (v) 3'×3'. (vi) Yes.

4. GENERAL :

(i) 1955—Poor; 1956—Satisfactory; 1957—Pulses failed. Cotton and *Cumbu* were normal. (ii) No serious pests or diseases. But groundnut was a failure throughout due to *tikka* disease and *surul poochi* attack (iii) Yield of *kapas* and stalks, *cumbu* grain and straw, groundnut pods and haulms, blackgram seed and *bhusa*, and horsegram seed and *bhusa*. (iv) (a) 1954—1957. (b) As per rotations. (c) No. (v) (a) and (b) No. (vi) Nil. (vii) Expt. failed in 1954.

5. RESULTS :**1955****I Cotton.**

(i) 404.5 lb./ac. (ii) 111.4 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of *kapas* in lb./ac.

Treatment	2	4	6	8	10	12	14
Av. yield	346.3	495.9	453.6	360.1	361.7	358.4	455.2

S.E./mean (except treatment 2) = 55.7 lb./ac.

S.E./mean (for treatment 2) = 39.4 lb./ac.

II Cumbu.

(i) 227.2 lb./ac. (ii) 58.96 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of *cumbu* in lb./ac.

*Reference for item nos (iv) to (vii) of basal conditions for expt. no. 57-59(68) on page 455.

Crop	Method of sowing	Variety	Seed rate	No. of hoeings and weedings.
Groundnut	Dibbled in holes 9" apart in either way.	TMV—3	80 lb./ac.	Twice
Red gram	Dibbled in rows 6' apart with 3' within the row.	S.A. 1	4 lb./ac.	Twice
Cholam	Sown in lines 18" apart and thinned to 8" in the row.	CO—19	15 lb./ac.	Thrice
Castor	Dibbling in holes 3' apart in either way.	TMV—2	12 lb./ac.	Twice
Lab-lab	Dibbling in holes 3' apart with 1' within the row.	D.L. 231	12 lb./ac.	Twice
Cotton	Dibbling in holes 18" apart with 6" in the row.	MCU—2	10 lb./ac.	Twice
Sannhemp	Broadcast.	Local	15 lb./ac.	Once.

2 ploughings with Cooper—11, one each with junior hoe and country plough uniformly to all plots. The field is unirrigated.

Treatment	1	3	7	11
Av. yield	250.6	252.7	224.2	181.5

S.E./mean (except treatment 1) = 29.5 lb./ac.

Crop :- Lucerne.**Ref :- M. 57(90).****Site :- Agri. College and Res. Instt., Coimbatore.****Type :- 'M'.**

Object :—To find out a suitable manure for Lucerne grass.

1. BASAL CONDITIONS :

(i) 15 C.L./ac. of F.Y.M. applied to previous crop *Ragi*. 4 to 5 ploughings before sowing. (ii) (a) Loamy. (b) Refer soil analysis, Coimbatore. (iii) N.A. (iv) Lucerne. (v) Sown on 19.8.1957 at spacing of 2'×6". (vi) N.A. (vii) Nil. (viii) Weeding once a month. (ix) Nil. (x) Irrigated. (xi) 27.85". (xii) 11 monthly harvests starting from 14.10.1957.

2. TREATMENTS :

1. Control (no manure).
2. B.M. at $1\frac{1}{2}$ cwt./ac.
3. B.M. at 3 cwt./ac.
4. Super at 30 lb./ac. of P_2O_5 .
5. Super at 60 lb./ac. of P_2O_5 .

3. DESIGN :

(i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 4. (iv) and (v) Nil. (vi) Yes.

4. GENERAL :

(i) Poor. (ii) Nil. (iii) Yield of green grass. (iv) (a) No. (b) Nil. (v) Nil. (vi) Expt. was conducted by the Systematic Botanist, Coimbatore.

5. RESULTS :

(i) 15926 lb./ac. (ii) 2592 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grass in lb./ac.

Treatment	1	2	3	4	5
Av. yield	15408	16192	16336	16352	15344

S.E./mean = 1296 lb./ac.

Crop :- Grasses.

Ref :- M. 57(91), 58(91), 59(70).

Site :- Agri. College & Res. Instt., Coimbatore. Type :- 'MV'.

Object :—To find out suitable manure to increase the yielding capacity of different perennial grasses.

1. BASAL CONDITIONS :

(i) *Ragi* was raised in the field in previous season and 15 C.L./ac. of F.Y.M. was applied to it. (ii) (a) Loamy. (b) N.A. (iii) Transplanted from nursery. (iv) As per treatments. (v) Planted on 26.3.1957 at a spacing of 3'×1.5' in a plot of 36'×6'. (vi) One month approximately. (vii) Nil. (viii) 5 to 6 times ploughed with country plough and 4 to 5 times with Victory plough. Hand weeding once in 2 or 3 months. (ix) Nil. (x) Irrigated. (xi) 1957—35.21". (xii) Monthly harvest starting from 15th May each year to 15th April of the next year (for one year).

2. TREATMENTS :**Main-plot treatments :**

5 species of grasses : $V_1 = \text{Panicum antidotale}$, $V_2 = \text{Panicum maximum}$, $V_3 = \text{Bracharia mutica}$, $V_4 = \text{Blou buffel}$ and $V_5 = \text{Cenchrus ciliaris}$.

Sub-plot treatments :

9 manures : $M_1 = \text{Control}$ (no manure), $M_2 = \text{B.M. at 1 cwt./ac.}$, $M_3 = \text{A/S at 30 lb./ac. of N}$, $M_4 = \text{Super at 30 lb./ac. of P}_2\text{O}_5$, $M_5 = \text{F.Y.M. at 5 tons/ac.}$, $M_6 = \text{F.Y.M. at 5 tons/ac.+B.M. at 1 cwt./ac.}$, $M_7 = \text{F.Y.M. at 5 tons/ac.+Super at 30 lb./ac. of P}_2\text{O}_5$, $M_8 = \text{F.Y.M. at 5 tons/ac.+A/S at 30 lb./ac. of N}$ and $M_9 = \text{A/S at 30 lb./ac. of N+Super at 30 lb./ac. of P}_2\text{O}_5$. Manures applied in the month of April each year.

3. DESIGN :

(i) Split-plot. (ii) (a) 5 main-plots/block ; 9 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) About 8,800 slips/ac. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Grass yield. (iv) (a) 1957—1959. (b) Nil. (v) Nil. (vi) Expt. was conducted by Botany Section.

5. RESULTS :

1957

(i) 35329 lb./ac. (ii) (a) 10932 lb./ac. (b) 5488 lb./ac. (iii) All effects are highly significant. (iv) Av. yield of grass in lb./ac.

Crop :- Glyricidia.**Ref :- M. 54(23).****Site :- Agri. College and Res. Instt., Coimbatore.****Type :- 'D'.**

Object :—To study the efficacy of the insecticides in controlling aphids on Glyricidia plants.

1. BASAL CONDITIONS :

- (i) N.A. (ii) (a) Red loam. (b) Refer soil analysis, Coimbatore. (iii) N.A. (iv) Glyricidia. (v) December, 1953. (vi) N.A. (vii) to (ix) Nil. (x) Irrigated. (xi) and (xii) N.A.

2. TREATMENTS :

6 insecticides : I_0 =Control, I_1 =BHC 10% dust, I_2 =BHC 0.1% spray, I_3 =Lindane 5% dust, I_4 =Lindane 0.1% spray and I_5 =Bharat Pulverising Mill's Malathion 1 oz. in 10 gallons of water spray.

3. DESIGN :

(i) R.B.D. (ii) (a) 6. (b) N.A. (iii) 4. (iv) 4 plants/plot. (v) Two buffer plants were left in between two treatments. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Aphids were noticed. Control measures as per treatments. (iii) Aphid population counts were taken from 4 random twigs in each plant. (iv) (a) No. (b) Nil. (v) and (vi) Nil.

5. RESULTS :

(i) to (iv) Av. population count of aphids 48 hours after application of treatments.

Treatment	I_0	I_1	I_2	I_3	I_4	I_5	G.M.	S.E./plot	S.E./mean	Significance
Population count	331.00	3.25	23.25	50.50	25.50	1.25	72.46	—	—	—
Transformed value in log $(x+1)$	2.4670	0.4758	0.9343	1.6991	1.3134	0.1946	1.1807	0.4464	0.2232	Highly significant.

Crop :- Banana.

Ref :- M. 56(108).

Site :- Central Banana Res. Stn., Aduthurai.

Type :- 'C'.

Object :—To determine the optimum cultural practice to secure a better stand and growth of Banana bunches.

1. BASAL CONDITIONS :

(i) Banana grown previously. (ii) (a) Clayey loam. (b) Refer soil analysis, Aduthurai. (iii) By suckers. (iv) Poovan. (v) 24.8.1956. Planting in rows with 8'×8' spacing. (vi) 4 months. (vii) 25 lb./pit of C.M. before planting. (viii) 4 shallow diggings and one deep digging during Jan.; fortnightly desuckering and manuring twice during 3rd and 5th month after planting and periodical weeding. (ix) Nil. (x) Irrigated. (xi) 53.10". (xii) N.A.

2. TREATMENTS :

All combinations of (1), (2) and (3)

- (1) Cutting of suckers : C_0 =No cutting and C_1 =Cutting.
- (2) Drying of suckers : D_0 =No drying and D_1 =Drying in sun for 15 days.
- (3) 2 levels of dipping : T_0 =No dipping and T_1 =Dipping in thick cowdung solution.

3. DESIGN :

(i) R.B.D. (ii) (a) 8. (b) N.A. (iii) 4. (iv) 6 experimental plants. (v) 60 plants were left as guard row. (vi) Yes.

4. GENERAL :

(i) Fair. (ii) Nil. (iii) Height and girth of the plants, number of leaves, weight of the bunch, number of fruit, date of flowering etc. (iv) (a) and (b) 1956—1957. (v) and (vi) Nil.

5. RESULTS :

(i) 24.6 lb./plant. (ii) 2.4 lb./plant. (iii) None of the effects is significant. (iv) Av. yield of banana in lb./plant.

	C_0	C_1	Mean	T_0	T_1
D_0	25.9	24.1	25.0	25.1	24.9
D_1	23.8	24.5	24.1	23.9	24.4
Mean	24.8	24.3	24.6	24.5	24.6
T_0	24.8	24.2			
T_1	24.9	24.4			

S.E. of any marginal mean	= 0.6 lb./plant.
S.E. of the body of table	= 0.8 lb./plant.

Crop :- Banana.**Ref :- M. 56(109).****Site :- Central Banana Res. Stn., Aduthurai.****Type :- 'C'.**

Object :— To determine the optimum spacing and depth of planting for Banana.

1. BASAL CONDITIONS :

- (i) The area was under banana previously. (ii) (a) Clayey loam. (b) Refer soil analysis, Aduthurai. (iii) By suckers. (iv) Poovan. (v) 24.8.1956. Planting of suckers in rows. (vi) 4 months. (vii) 25 lb. of C.M./pit before planting. (viii) 4 shallow diggings and one deep digging during January. Desuckering twice a month. (ix) Nil. (x) Unirrigated. (xi) 38.61". (xii) N.A.

2. TREATMENTS :

All combinations of (1), (2) and (3)

(1) 2 depths of planting : $D_1 = \frac{3}{4}'$ and $D_2 = 1\frac{1}{2}'$.(2) Spacings : $S_1 = 9' \times 9'$ and $S_2 = 10' \times 10'$.(3) 2 levels of desuckering : T_1 = First sucker allowed to grow and T_2 = First sucker produced at flowering allowed.**3. DESIGN :**

- (i) Factor in R.B.D. (ii) (a) 8. (b) N.A. (iii) 4. (iv) 25 trees. (v) 16 plants. (vi) Yes.

4. GENERAL :

- (i) Fair. (ii) Nil. (iii) Height and girth of the plants, weight of the bunch, no. of hands, no. of fruit, average spacing between hands, dates of flowering and date of harvest etc. (iv) (a) 1956–1961. (b) Nil. (v) and (vi) Nil.

5. RESULTS :

- (i) 13003 lb./ac. (ii) 1537 lb./ac. (iii) S effect is highly significant ; T effect is significant. Other effects are not significant. (iv) Av. yield of banana in lb./ac.

	D ₁	D ₂	Mean	T ₁	T ₂
S ₁	14688	13591	14139	13517	14762

Mean	13388	12619	13003	12214	13793
T ₁	12088	12340			
T ₂	14687	12898			

$$\begin{aligned} \text{S.E. of any marginal mean} &= 384.2 \text{ lb./ac.} \\ \text{S.E. of body of any table} &= 543.4 \text{ lb./ac.} \end{aligned}$$

Crop :- Banana.**Ref :- M. 57(115).****Site :- Central Banana Res. Stn., Aduthurai.****Type :- 'C'.**

Object :— To derive the optimum desuckering practice for Banana crop.

1. BASAL CONDITIONS :

- (i) The area was under banana previously. (ii) (a) Clayey loam. (b) Refer soil analysis, Aduthurai. (iii) By suckers. (iv) Poovan. (v) 25.9.1957, planted in rows with a spacing of 8'×8'. (vi) 4 months. (vii) 25 lb./pit of F.Y.M. before planting. (viii) 4 shallow diggings and 1 deep digging during January. (ix) Nil. (x) Unirrigated. (xi) 49.78". (xii) N.A.

2. TREATMENTS:

1. All the daughter suckers are allowed to grow.
2. Removal of all except the 1st daughter sucker.
3. Removal of all except the 1st and the 3rd suckers.
4. Removal of all except the first sucker after flowering.

3. DESIGN :

- (i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 6. (iv) 25 plants. (v) 16 plants. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Height, girth of the plants, no. of leaves, wt. of the bunches. (iv) (a) and (b) 1957—N.A. (v) Desuckering operations were being carried out periodically once in 15 days. (vi) Nil.

5. RESULTS :

- (i) 12155 lb./ac. (ii) 911.9 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of banana in lb./ac.

Treatment	1	2	3	4
Av. yield	10132	12396	11084	14008

S.E./mean = 372.2 lb./ac.

Crop :- Banana.

Ref :- M. 58(141).

Site :- Central Banana Res. Stn., Aduthurai.

Type :- 'C'.

Object :—To compare the suitability of mother corms against the daughter corms as planting material.

1. BASAL CONDITIONS :

- (i) Previously banana was grown in the field. (ii) (a) Clayey loam. (b) Refer soil analysis, Aduthurai. (iii) By suckers. (iv) Mauritius. (v) 27.9.1958/27.1.1959. (vi) 4 months. (vii) One basket/pit of C.M. before planting. (viii) 5 diggings and fortnightly desuckering. (ix) Nil. (x) Unirrigated. (xi) 30.95" (xii) N.A.

2. TREATMENTS :

4 types of planting material : T_1 =Whole mother corm, T_2 =Bits from mother corm, T_3 =Whole daughter corm and T_4 =Bits from daughter corm.

3. DESIGN :

- (i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 6. (iv) 6. (v) N.A. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Height and girth measurements of the plant, no. of leaves, wt. of the bunches, no. of hands and no. of fruit etc. (iv) (a) and (b) 1959. (v) and (vi) Nil.

5. RESULTS :

- (i) 19.6 lb./plant. (ii) 2.4 lb./plant. (iii) Treatment differences are not significant. (iv) Av. yield of banana in lb./plant.

Treatment	1	2	3
Av. yield	18.3	20.1	19.9

S.E./mean = 1.0 lb./plant.

Crop :- Banana.

Ref :- M. 58(142).

Site :- Central Banana Res. Stn., Aduthurai.

Type :- 'C'.

Object :—To compare the suitability of mother corms against the daughter corms as planting material.

1. BASAL CONDITIONS :

(i) Banana was the previous crop. (ii) (a) Clayey loam. (b) Refer soil analysis, Aduthurai. (iii) By suckers. (iv) *Rasthali*. (v) 27.9.1958/27.1.1959. (vi) 4 months. (vii) One basket/pit of C.M. before planting (viii) Five diggings and fortnightly desuckering and manuring twice during 3rd and 5th month after planting. (ix) Nil. (x) Irrigated. (xi) 30.95". (xii) N.A.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 58 (141) on page 464.

5. RESULTS :

(i) 22.6 lb./plant. (ii) 2.3 lb./plant. (iii) Treatment differences are not significant. (iv) Av. yield of banana in lb./plant.

Treatment	1	2	3	4
Av. yield	23.7	21.2	23.0	22.3
S.E./mean = 0.9 lb./plant.				

Crop :- Banana.

Ref :- M. 56(110).

Site :- Central Banana Res. Stn., Aduthurai.

Type :- 'CV'.

Object :—To determine the optimum month for planting banana.

1. BASAL CONDITIONS :

(i) The area was under banana previously. (ii) (a) Clayey loam. (b) Refer soil analysis, Aduthurai. (iii) By suckers. (iv) As per treatments. (v) Planted as per treatments in rows with spacing 8'×8'. (vi) As per treatments. (vii) 25 lb. of C.M. applied in the pit before planting. (viii) 4 shallow diggings and one deep digging during January ; desuckering twice a month. (ix) Nil. (x) Irrigated. (xi) 38.61". (xii) Oct. 1958.

2. TREATMENTS :**Main-plot treatments :**

12 dates of planting : T_1 to T_{12} = During the months January to December, 1956.

Sub-plot treatments :

All combinations of (1) and (2)

(1) 2 varieties : $V_1 = Rasthali$ and $V_2 = Monthan$.

(2) 2 ages of suckers : $A_1 = 3$ months and $A_2 = 4$ months.

3. DESIGN :

(i) Split-plot. (ii) (a) 12 main-plots/block ; 4 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) 4 plants/sub-plot ; 16 plants/main-plot. (v) Guard row is left only all round the area. (vi) Yes.

4. GENERAL :

Same as in expt. no. 56(109) on page 463.

5. RESULTS :

See page 466 under expt. no. 57(114).*

Crop :- Banana, Sugarcane and Paddy.

Ref :- M. 57(114).

Site :- Central Banana Res. Stn., Aduthurai.

Type :- 'R'.

Object :—To find out the suitable rotation practice for Banana to secure higher monetary return.

1. BASAL CONDITIONS :

(i) Banana. (ii) (a) Clayey loam. (ii) (b) Refer soil analysis, Aduthurai. (iii) Banana by suckers. Sugarcane by sets and paddy by transplanting. (iv) *Poovan* banana ; sugarcane CO—419 ; paddy CO—25. (v) 14.9.1957. (vi) 4 months old suckers. (vii) 25 lb./pit of C.M. before planting. (viii) 5 diggings and fortnightly desuckering and periodical weeding. (ix) Nil. (x) Irrigated. (xi) 1957—53.10", 1958—30.95" and 1959—27.40". (xii) N.A.

2. TREATMENTS :

1. Plant crop of banana followed by sugarcane, G.M. and paddy in 3½ years.
2. 2 crops of banana followed dry sugarcane in 3½ years.
3. Sugarcane followed by banana, G.M. crop and paddy in 3½ years.
4. 2 crops of banana followed by G.M. and paddy in 3½ years.
5. 3 crops of banana in 3½ years.

3. DESIGN :

- (i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 5. (iv) 36 plants. (v) and (vi) Yes.
