

## Salient features

- ✓ Fish hydro lysate is a fish Based bio fertilizer prepared out of fish waste
- ✓ It is one of the oldest and most effective fertilizer. For centuries fish has been recognized as an excellent fertilizer source.
- ✓ It turns fish wastes into growth promoters in plant, fish and animal productivity and reducing environmental pollution.
- ✓ Produced through cold processing by using equal amount of molasses and fish waste. This retains ingredient of naturally occurring amino acid, fatty acid, vitamins, hormones and enzyme
- ✓ Fish hydro lysate is highly bioactive awesome for promoting plant, animal and fish growth.
- ✓ Fish hydro lysate has been found to be very effective as an additive to compost.
- ✓ They accelerate the process by feeding soil microbes, while adding essential trace elements and potent biomolecules to the mix.
- ✓ Fish hydro lysate has N:P:K::2:0.5:0.3 and stable at P<sup>H</sup> 3.5-4.0
