

~~W.C.~~ W.C., Patel, A.P. and Dayal, R. 1976. *Bidi-tobacco and soil erosion*

problem in ravine lands of Central Gujarat. *Indian J. Soil Conserv.*, 6(2):101-105.

Research studies on *bidi*-tobacco in Gujarat showed that application of nitrogen has no effect on the production of runoff, soil loss and nitrogen losses. The study also reveals that by following ridge planting of tobacco as against flat planting (normal practice) after green manuring, the runoff, soil loss and nitrogen losses could be reduced by 43.7, 45.6 and 45.3%
