

307. Nema, J.P., Kamannavar, H.K. and Shah, K.A. 1980. Design aspects of contour and peripheral bunds. *Indian J. Agric. Sci.*, 50(11): 857-61.

Contour and peripheral bunds were evaluated after 17 to 21 years from the point of view of stability and reduction in cross-section, as well as maintenance and outlet requirements. The life expectancy, maintenance and outlet requirements showed that bunds having a cross-section of 0.93 square meter were the best suited for the soil and climate prevailing at Vasad.
