

392 **Pratap Narain, Khybri, M.L. and Singh, Ravender. 1987.** Agroforestry for agriculture dominated watersheds. *Indian J. Soil Conserv.*, 14(3): 91-98.

Agroforestry inventions in agriculture dominated watersheds may enhance total production of food, fuel, fibre and fodder, improve soil fertility, moisture conservation and offer healthy environment through soil conservation. There may be competition for moisture, nutrients, space, etc. but agroforestry systems aim to optimize these through management and choice of tree species. Suitable species for different agroclimatic zones are listed.
