

- with protective irrigation under VADZ conditions.
- 405. Rama Mohan Rao, M.S. and Seshachalam, N. 1978.** Productivity problems of black soils of Bellary district in Karnataka. *Mysore J. Agric. Sci.*, 12:79-85.

The analysis of rainfall in Bellary region suggested that the intensity of cropping in light and medium soils could be increased to 200 per cent from the present 100 per cent level under normal rainfall conditions. Use of nitrogen and phosphorus fertilizers increased yields by 100 per cent. Proper choice of crops depending upon soil condition and management practices are suggested.
