

465. **Singh, A. and Dayal, R. 1975.** Note on effect of depth of irrigation on wheat. *Indian J. Agric. Sci.*, 45(7): 321-322.

The study conducted at Vasad (Gujarat) during *rabi* season of 1972-73 indicated that maximum yield of wheat (variety Moti) was obtained with minimum amount of irrigation (30 cm depth of irrigation). The treatments also gave maximum water use efficiency when the depth of irrigation was increased.
