

471. Singh, Gurmeh, Singhal, A.K. and Nambiar, K.K.M. 1967. Effect of mulching on moisture retention and yield of wheat under rainfed conditions. *J. Soil and Water Conserv. India*, 15: 1-8.

The effect of different mulches viz. soil mulch, *jowar* stalk, dry grass and polyethylene film on moisture retention and wheat yield under rainfed conditions on silty clay loam soil has been discussed. Mulches conserved moisture and increased the yield significantly. Highest yield was obtained under grass mulch.
