Singh, Gurmel, Singhal, A.K. and Nambiar, K.K.M. 1967. Effect of mulching on moisture retention and yield of wheat under rainfed conditions. J. Soil Water Conserv. India, 15: 1-8.

The effect of different mulches viz. soil mulch, jowar stalk, dry grass and polyethylene on moisture retention and wheat yield under rainfed conditions on silty clay loam soil been discussed. Mulches conserved moisture and increased the yield significantly. Fighest yield was obtained under grass mulch.
