

was reflected in higher wheat yield ranging from 7 to 25%.

499. Singh, Pratap, Mittal, S.P. and Singh, K. 1988. Response of *taramira* to limited irrigation in Shiwalik foothill region. *Indian J. Soil Conserv.*, 16(1): 22-26.

Effect of three irrigation treatments viz. no irrigation, one irrigation at pre-sowing and two irrigations one each at pre-sowing+flowering stage were studied on *taramira* (*Erucosativa* Mill.) from 1978-1979 to 1980-1981 in Shiwalik foothill region. Two irrigations (Pre-sowing+flowering) recorded significantly higher grain and straw yield and net returns in two years out of three years of study.
