

Agrihotri, Y., Mishra, P.R. and Singh, Sadhu. 1985. Effect of soil working on

growth performance of *Acacia catechu* in bouldery soil. *Indian J. Soil Conserv.* 13(2&3):77-79.

The study was taken up to examine whether the growth of *Acacia* plants can be affected favourably with different types of soil working wherein boulders inside are replaced by good earth. Economics of different types of soil working revealed that the soil working of 0.30 x 0.30 x 0.30 m followed by 0.60 x 0.60 x 0.60 m is the most economical for growing *Acacia catechu*.
