

- 909. Mathur, C.P. and Sastry, G. 1980.** Hydrograph parameters as influenced by land uses. Abst. 34, National Symp. on Soil Conservation and Water Management in 1980's, Dehradun, March 12-13, 1980: 24.

The paper describes effect of landuse on hydrograph parameters for small watersheds keeping physiographic and physical factors comparable. The runoff hydrographs obtained indicate that time to peak and recession time in case of maize crop have been found to be maximum. Relationships between time to peak, time of concentration and recession time have been reported.
