

- 978.** **Wasiullah and Dalal, S.S. 1962.** Multi-slot devisor for measurement of runoff from small plots. *Indian For.*, 88(8):579-584.

The authors suggest that reasonably accurate results can be obtained with the multi-slot devisors for the accurate measurement of soil and water losses due to precipitation from experimental plots or watersheds. However, proper calibration should be done before use and they are carefully maintained and closely observed during rains.
