

- 1105. Dadhwal, K.S. and Katiyar, V.S. 1989.** Effect of farm yard manure on growth, yield and chemical composition of *bhabar* in minespoil. *J. Indian Soc. Soil Sci.*, 37(2):412-415.

The paper presents result of a pot culture experiment conducted at Dehradun from 1984 to 1986 for studying the effect of graded doses of FYM (0, 10, 30 and 40 Mg/ha) on the properties and grass growth on a mine spoil/debris soil. The spoil was collected in bulk from Sahastradhara abandoned mine sites. The results indicate that application of FYM at 20 Mg/ha is adequate for the initial establishment and better growth of *Eulaliopsis binata* in degraded mine spoil.
