

1231. Mittal, S.P., Agnihotri, Y. and Madhukar, R.M. 1983. Watershed management

and controlled grazing promote dairy development in hill areas. *Cooperative Dairying*, VI(4):19-23.

The Sukhomajri model, based on the principles of integrated watershed management, water harvesting and peoples' active involvement in managing and protecting the watersheds, has made it possible to increase the milch animals (buffaloes and cows) as a result of increase in fodder production. The milk yield has almost doubled during the period 1978-83. This has improved the socio-economic conditions of the people of this village.
