The following SAS macro has been developed to generate a class of **First Order Rotatable Designs with Neighbour Effects** (FORDNE) in smaller number of runs as obtained in Varghese *et al.* (2018). Here, user need to **Enter the number of factors as 'k'**. If the user executes the program after entering the value of k, then the SAS Macro will produce the output in the form of a design under the heading **FORDNE in smaller runs**.

```
/* SAS Macro for the generation of FORDNE with minimum runs */
options nodate nonumber;
%let k=3; /* Enter the number of factors*/
ods rtf file= 'output.rtf' startpage=no;
proc iml;
sss=j(&k,1,2);
s=j(nrow(sss)-1,1,0); /* 2 level factorial*/
do i=1 to nrow(s);
s[i,]=sss[i,];
end;
If &k<2 then do;
print 'The number factor should be >=2';
end;
else do;
s=j(&k,1,2);
a=j(max(s),nrow(s),0);
do kk=1 to nrow(s);
m=mod(s[kk, ],2);
do i=1 to s[kk, ];
do j=i to s[kk, ];
if m=1 then
    do;
        a[j,kk]=-((s[kk, ]-1)/2)+(i-1);
    end;
    else
    do;
        if -(s[kk, ]/2)+(i-1)<0 then do;
            a[j,kk]=-(s[kk, ]/2)+(i-1);
        end;
        else do;
            a[j,kk]=-(s[kk, ]/2)+i;
        end;
    end;
end;
end;
end;
