About the book

The book: "Pasture Development in Arid Wasteland" is a compendium of authentic information on pasture/grassland development in arid and semi-arid wastelands, which covers 30 articles contributed by different experts.

The book covers the aspects of natural resource management, crops and species identification, perennial grasses and legumes suitable for the arid wastelands, different advanced agrotechniques for pasture development, seed production technology for grasses and fodder legumes, livestock production management, grazing methodology and different extension approaches for dissemination of technology. The herbage / fodder production in different situations has also been highlighted. The book will be useful for the students, research workers, different wasteland development agencies, and specially the farmers of arid regions.
