FOREWORD

The I. C. A. R. has adopted the 'Co-ordinated approach' to crop improvement as its strategy in agricultural research. This approach is based on the principle of giving high priority to problem solving research and for the purpose an intimate knowledge of research in progress and trends of results is very essential. To give impetus to this approach, I. C. A. R. started a scheme for collecting data of all field experiments conducted in the country. It was aimed at compilation of agronomic experiments in the country, with a view to indicate the gaps in the knowledge and to avoid duplication. The scheme entitled : "National Index of Field Experiments" is running under the Institute of Agricultural Research Statistics which has rendered a very valuable service by preparing compendia of agricultural field experiments conducted in the country. Two series of the compendia containing results of about 7,200 and 12,000 experiments conducted during the periods 1948-53 and 1954-59 respectively have already been published by the Institute. The present is the third series of compendia and is expected to contain the results of about 18,000 experiments conducted during the period 1960-65.

The number and the types of experiments have been increasing at a fast rate. Further, many of the experiments were being repeated over a number of years. The conclusions drawn from such experiments should take into account the seasonal variations. For this purpose, it was necessary to carry out consolidated analysis of results over years. Thus, the task of compilation, analysis and interpretation of results of experiments being covered in the third series became more formidable compared to those covered in the earlier two series.

The preparation of this compendium has been possible by the whole-hearted co-operation of State Departments of Agriculture, Agricultural Universities and Central Research Institutes who ungrudgingly made the results of their experimental research available. My thanks are due to various officers of these institutions for participating in this work.

I hope that the present series will be followed by periodical publications of similar compendia for later years in order that the availability of results of scientific experiments in agriculture in India may be maintained up-to-date in a consolidated form.

PREFACE

The present set of volumes form Part III in the series of compendia of Agricultural Field Experiments being published under the project of National Index of Field Experiments. Volumes comprising in Parts I and II of the series pertaining to the periods 1948-53 and 1954-59 were published in 1962 and 1965 and contained the results of about 7,200 and 12,000 experiments respectively. The present volumes include results of experiments conducted during the period 1960-65. During the last decade there has been an enormous increase in agricultural research and experimentation, so much so that, for the period 1960 – 65 to which the present volumes refer, results of about 18,000 experiments are available.

Like the earlier two series, the compendium for Part III is divided into 15 volumes, one each for (1) Andhra Pradesh, (2) North-Eastern Region (Assam, Manipur, Nagaland, Meghalaya, Tripura, Arunachal Pradesh and Mizoram), (3) Bihar, (4) Gujarat, (5) Kerala, (6) Madhya Pradesh, (7) Maharashtra, (8) Mysore, (9) Orissa, (10) North-Western Region (Punjab, Haryana, Jammu & Kashmir and Himachal Pradesh), (11) Rajasthan, (12) Tamil Nadu, (13) Uttar Pradesh, (14) West Bengal and (15) All Central Institutes. A departure has, however, been made in the presentation of the material contained in each volume. Whereas the results of individual experiments were presented in the volumes of previous series, the present series contains results of pooled statistical analysis of experiments that were conducted for two or more years and concluded during the period 1960-65. In respect of those experiments conducted only for one year, and also those conducted for more than one year but were continuing beyond 1965, the results of individual experiments have been presented

The work under the scheme was carried out at the Institute of Agricultural Research Statistics. Collection of data from different research stations, their scrutiny and preliminary analysis were carried out in successive periods under the charges of Shri T.P. Abraham, Assistant Statistical Adviser, now Joint Director, Central Statistical Organisation ; Dr. B.N. Tyagi, Senior Statistician, Now Joint Director of Agriculture (Statistics), Uttar Pradesh and Shri M.G. Sardana, Senior Statistician, now Officer-on-Special Duty, Central Statistical Organisation. Shri O.P. Kathuria, Junior Statistician, now Statistician in Indian Agricultural Research Institute was also associated.

Preparation of material for inclusion in the third series of compendia volumes and their printing was carried out under the guidance of Shri K.S. Krishnan, Senior Statistician. Shri R.K. Khosla and Shri P.N. Soni, Junior Statisticians, were responsible for the actual working of the scheme till October 1973 and thereafter respectively.

The collection of data of experiments from various research stations was done by the regional staff of the Institute placed in different States. They deserve to be congratulated for the hard work they have put in. The tabulation of the large volume of data involved was facilitated by the assistance rendered by the staff of the computer centre located at the Institute. S/Shri P.P. Rao. M.P. Saksena, M.L. Sahni, A. K. Mukherjee, S. L. Garg, R.K. Jain, H.C. Jain, G.V.S R. Krishna, J.K. Kapoor, D.K. Gulati, D.P. Singh, Mahender Singh, Kuldip Singh and S.S. Kutaula, statistical staff of the Institute deserve mention for the careful and painstaking work in the analysis of data, combination of results of similar experiments and proof reading of the compendia volumes.

Thanks are due to the State Departments of Agriculture, the Central Institutes and the Agricultural Universities who made the data of the experiments conducted under their jurisdiction readily available to the staff of the Institute. The I. A. R. S. acknowledges with thanks their willing co-operation without which the consolidation of the results would not have been

possible. The Institute is also thankful to various officers in the State Departments of Agriculture and Agricultural Universities who worked as Regional Supervisors for the project from time to time and provided guidance to the regional staff working in the scheme. The list of the names of the regional supervisors and regional staff of the project is given on the following pages.

ABBREVIATIONS COMMON TO EXPERIMENTS ON ANNUAL AND PERENNIAL CROPS AND EXPERIMENTS ON CULTIVATOR'S FIELDS GIVEN IN EXPERIMENTAL DATA

Crop :—In the top left corner, is given the name of the crop on which the experiment is conducted. Within brackets along side the crop is mentioned the season wherever the information is available.

Ref :—Against the sub-title 'Reference' is mentioned the name of the State, the year in which the experiment is conducted and the serial number of the experiment for that year is given in brackets.

Abbreviations adopted for States are as follows :

1.	A.P.	—	Andhra Pradesh	11.	Mn.	—	Manipur
2.	As.	—	Assam	12.	Ms.	—	Mysore
3.	Bh	—	Bihar	13.	N.L.	—	Nagaland
4.	Gj.	—	Gujarat	14.	Or.	—	Orissa
5.	H.P.	—	Himachal Pradesh	15.	Pb.	—	Punjab
6.	Hr.	—	Haryana	16.	Rj.	—	Rajasthan
7.	J.K.	—	Jammu & Kashmir	17.	T.N.	—	Tamil Nadu
8.	K.	—	Kerala	18.	Tr.	—	Tripura
9.	M.P.	—	Madhya Pradesh	19.	U.P.	—	Uttar Pradesh
10.	Mh.	—	Maharashtra	20.	W.B.	—	West Bengal

For the experiments conducted under the schemes sponsored by the Indian Council of Agricultural Research, like the All India Co-ordinated Agronomic Experiments (Model Agronomic Experiments and Simple Fertilizer Trials) scheme, no serial numbers have been given at the source as the data of these experiments were collected at the headquarters (New Delhi). In such cases, the abbreviation MAE or SFT is given in the bracket against the year in which the experiment is conducted.

Site & Centre :—Name of the Research Station is mentioned along with the place where it is located. *e.g.* Agri. Res. Stn., Vyara for Agricultural Research Station, Vyara.

For Central Institutes, the corresponding standard abbreviations have been adopted as given below :

C. A. Z. R. I.	—	Central Arid Zone Research Institute.
C. P. C. R. I.	—	Central Plantation Crops Research Institute.
C. P. R. I.	—	Central Potato Research Institute.
C. R. R. I.	—	Central Rice Research Institute.
C. S. S. R. I.	—	Central Soil Salinity Research Institute.
C. T. C. R. I.	—	Central Tuber Crops Research Institute.
C. T. R. I.	—	Central Tobacco Research Institute.
C. T. R. L.	—	Cotton Technological Research Laboratory.
I. A. R. I.	—	Indian Agricultural Research Institute.
I. G. F. R. I.	—	Indian Grassland & Fodder Research Institute.
I. H. R.	—	Institute of Horticultural Research.
I. I. S. R.	—	Indian Institute of Sugarcane Research.
I. L. R. I.	—	Indian Lac Research Institute.
J. A. R. I.	—	Jute Agricultural Research Institute.
J. T. R. L.	—	Jute Technological Research Laboratory.
S. B. I.	—	Sugarcane Breeding Institute.

In case of the experiments conducted on cultivator's fields, whether under an Indian Council of Agricultural Research scheme or by the State Government, the abbreviation (c.f.) is given along with the rite or centre as, for example, Cuttack (c.f.).

Type :—Abbreviations used against this item are one, or more than one, of the following : C—Cultural ; D—Control of Diseases and Pests ; I—Irrigational ; M—Manurial ; R—Rotational ; V—Varietal and X—Mixed cropping. In factorial experiments, the treatments will be abbreviated as, for example. Cultural-*cum*-Manurial as CM.

Object :—A statement of the objective of the experiment is given indicating the main crop and the type of the experiment.

Results :—Information under this heading should be read against the following items :

(i) General mean. (ii) S. E. per plot. (iii) Results of test of significance. (iv) Summary table(s), with critical differences for individual effect means which are significant.

The information regarding the particulars of research stations may be obtained under the respective items as given below :

PARTICULARS OF RESEARCH STATIONS

A. General Information :

(i) District and the nearest railway station with Latitude, Longitude and Altitude, if available. General topographpy of the experimental area. (ii) Type of tract it represents. (iii) Year of establishment. (iv) Cropping pattern. (v) Programme of research.

B. Normal Rainfall :

Average fortnightly rainfall, specifying the period on which the figures are based.

C. Irrigation and Drainage Facilities :

(i) (a) Whether available ; if so, since when. (b) Type of facilities available. (ii) Whether there is a proper drainage system.

D. Soil type and Soil analysis :

(i) Broad soil type with depth, colour and structure etc. (ii) Chemical analysis. (iii) Mechanical analysis.

E. No. of Experiments :

No. of experiments conducted on different crops that have been included in the compendium.

Information under the following heads is to be read against the respective items under experimental data as given on next page.

BASAL CONDITIONS

A. For experiments on annual crops :

(i) (a) Crop rotation followed, if any. (b) Previous crop. (c) Manuring of previous crop (State amount and kind). (ii) Soil type. (iii) Date of sowing/planting. (iv) Cultural practices : (a) Preparatory cultivation. (b) Method of sowing. (c) Seed-rate. (d) Spacing. (e) No. of seedlings per hole. (v) Basal manuring given to the whole experiment with time and method of application. (vi) Variety (indicate also early, medium or late). (vii) Irrigated or un-irrigated. (viii) Important post-sowing/planting cultural operations such as weeding, etc. (ix) Rainfall during crop season. (x) Date of harvest.

B. For experiments on perennial crops :

(i) Previous history of the experimental area (Give manuring and other operations). (ii) Soil type. (iii) Method of propagation of plants. (iv) Variety. (v) Date and method of sowing/planting (including spacing). (vi) Age of seedlings at the time of planting. (vii) Basal manuring given to the whole experimental area. (viii) Important cultural operations during the experimental year. (ix) Inter-cropping, if any. (x) Irrigated or un-irrigated (If irrigated, give the source, number, interval and intensity of irrigation). (xi) Rainfall during the experimental year. (xii) Date(s) of harvest.

C. For experiments on cultivator's fields :

(i) (a) Crop rotation followed, if any. (b) Previous crop. (c) Manuring of previous crop (State amount and kind). (ii) Soil type and soil analysis, if available. (iii) Basal manuring (Give time and method of application). (iv) Variety. (v) Cultural Practices : (a) Preparatory cultivation. (b) Method of sowing. (c) Seed-rate. (d) Spacing. (e) No. of seedlings per hole. (vi) Date of sowing/planting. (vii) Irrigated or un-irrigated. (viii) Important post-sowing/planting cultural operations such as weeding, etc. (ix) Rainfall during crop season. (x) Date of harvest.

DESIGN

A. For experiments on annual crops :

(i) Abbreviations for designs : C. R. D.—Completely Randomised Design ; R. B. D.—Randomised Block Design ; L. Sq.—Latin Square ; Fact.—Factorial ; Confd.—Confounded ; other designs and modifications of the above to be indicated in full. (indicate confounded effects, if any). (ii) (a) No. of plots per block (in a split-plot experiment, the number of main-plots per replication as well as the number of sub-plots per main-plot should be given). (b) Block dimensions. (iii) No. of replications. (iv) (a) Gross plot-size. (b) Net plot-size. (v) Border or guard rows kept. (vi) Whether treatments are randomised (independently in each block).

B. For experiments on perennial crops :

(i) Abbreviations for designs: C. R. D.—Completely Randomised Design ; R. B. D.—Randomised Block Design ; L. Sq.—Latin Square ; Fact.—Factorial ; Confd.—Confounded ; other designs and modifications of the above to be indicated in full. (indicate confounded effects, if any) (ii) (a) No. of plots per block (in split-plot experiments, the number of main-plots per replication as well as the number of sub-plots per main-plot should be given). (b) Block dimensions. (iii) No. of replications. (iv) (a) Net plot-size. (b) No. of trees per plot (In case of experiments on grasses give plot-size). (v) Border or guard rows kept. (vi) Whether treatments are randomised (independently in each block).

C. For experiments on cultivator's fields :

(i) Design with No. of plots/block and No. of replications (In split-plot experiments, the number of main-plots per replication as well as the number of sub-plots per main-plot should be given). (ii) Method of selection of sites with number and distribution of experiments. (iii) (a) Gross plot-size. (b) Net plot-size. (iv) Whether treatments are randomised (independently in each block).

GENERAL INFORMATION

A. For experiments on annual crops :

(i) General crop condition during growth (if lodged, state date of lodging). (ii) Incidence of pests and diseases and control measures taken, if any. (iii) Types of quantitative observations taken. (iv) (a) If the experiment has continued for more than one year, indicate year of commencement and year of termination. (b) Whether treatments assigned to the same plots every year. (c) Reference to combined analysis, if any. (v) Other centres, if any, where the same experiment has been conducted with reference numbers. (vi) Abnormal occurances such as heavy rains, frost, storm, drought, etc. (vii) Any other important information.

B. For experiments on perennial crops :

(i) General crop condition during growth. (ii) Incidence of pests and diseases and control measures taken, if any. (iii) Types of quantitative observations taken. (iv) If the experiment has continued for more than one year, indicate year of commencement and year of termination (Give reference of previous years, if any). (v) Other centres, if any, where the same experiment has been conducted with reference numbers. (vi) Reference to combined analysis, if any. (vii) Abnormal occurances such as heavy rains, frost, storm, drought, etc. (viii) Any other important information.

C. For experiments on cultivator's fields :

(i) General crop condition during growth. (ii) Incidence of pests and diseases and control measures taken, if any. (iii) Types of quantitative observations taken. (iv) In case of repetition in successive years. (a) Year of commencement and termination. (b) Whether treatments assigned to the same plots every year. (c) Reference to combined analysis, if any. (v) In case of repetition at other places, give names with references, if any. (vi) Abnormal occurances such as heavy rains, drought, etc. (viii) Any other important information.

CONTENTS

ANDHRA PRADESH

The general information regarding the agro-climatic regions, extent of irrigation, normal cropping pattern, etc. of the State of Andhra Pradesh has been furnished in the first and the second series of the National Index of Agricultural Field Experiments already published for the periods 1948-53 and 1954-59 respectively.

This volume includes the result of 1478 experiments conducted during the period 1960-65, as against 677 experiments for the period 1954-59 and 490 for the period 1948-54. Besides results of experiments belonging to All India Co-ordinated Agronomic Experiments Scheme of I.C.A.R., are also included in the present compendium. The consolidated results of the experiments conducted for more than one year and conducted during the period 1960-65 numbering 835 and forming 323 groups, have been presented with crop-wise and type-wise in Table 1.

TOTAL	680	59	248	99	73	16	5	25	3	1	1	232	36	1478

39 per cent of the total of 1478 experiments were on Paddy while Sugarcane, Caster and Groundnut accounted for 19, 11 and 9 per cent respectively of the total number of experiments. 46 per cent of the experiments were of purely manurial type while 12 per cent had manurial treatment applied in conjunction with other factors. Experiments relating to cultural practices and control of diseases and pests conducted on different crops, accounted for 17 per cent and 15 per cent respectively. Irrigational treatments were tried only in respect of 2 per cent of the total number of experiments reported.

The principal food crops of the State are Paddy, *Jowar*, Ragi and Pulses. Amongst the cash crops Sugarcane, Cotton, and Tobacco are the important crops grown in the State. Groundnut and Castor are the Oilseed crops, covering about 9% of the total cropped area. The salient feature of experimentation on important crops are given below :

Paddy : Paddy covered 3460* thousand hectares i.e. about 27% of the total cropped area. 330 experiments forming 150 groups were conducted during the period under report. All the experiments were conducted under irrigated conditions. Varieties like HR—19, MTU—15, HR—35, SLO—13, MLU—19 were commonly used. The net plot size adopted for experiments varied from 4·3 m. × 2·3 m. to 14·3 m. × 10·7 m.

Randomised Block Design was commonly used for experimentation. Out of 572 experiments, in as many as 478 experiments, this design was adopted. Split-plot, Confounded and Letin Square designs were adopted in 59, 29 and 6 experiments respectively. The experiments laid out in Randomised Block Design had replications ranging from 1 to 3 for 149 experiments, 4 to 6 for 268 experiments and more than 7 for the remaining. In experiments conducted in Split-plot and confounded designs number of replications varied from 2 to 6 and 1 to 3 respectively.

About 62 per cent of the total number of experiments, were of manurial type or had manure as one of the factors. The source of N in most of the manurial experiments was Am. Sulphate, C/A/N and Urea and that of P was Super, Nitro and Rock phosphate. The levels of N, tried in these experiments ranged between 0 and 134·5 Kg/ha. while that of P and K varied between 0 and 93 Kg/ha.

Beside these, result of experiments with different cultural practices like methods and dates of planting, age of seedlings, spacing between rows and between plants within rows and different methods of weeding, irrigational practices and of measures to control pests and diseases are included in the present volume.

Jowar : Jowar covered 2495* thousand hectares, accounting for about 20% of the total cropped area. Out of 31 experiments reported, 9 experiments forming 3 groups were concluded during the period under report. About one half of the experiments were conducted under irrigated conditions. Varieties like Co-18 (medium), Co-6 and PJ 36 were tried in experiments under irrigated condition while PJ 22 K (Medium) was commonly used in experiments conducted both under irrigated and rainfed conditions. The net plot area varied from 4·6 m. × 1·8 m. to 12·9 m. × 21·5 m.

Randomised Block Design was adopted for 19 experiments Split-plot and confounded designs were used in the case of 5 and 7 experiments respectively. About 60% of the experiments conducted in R.B.D had replications ranging between 2 and 6 while in the case of split-plot and confounded designs 4 to 6 and 1 to 2 replications were used.

Manurial experiments accounted for 50 per cent of the total number of experiments. In these experiments levels of N, P and K tried varied between 0 to 160, 0 to 67, 0 to 62 Kg/ha. respectively. Remaining experiments were conducted on Cultural practices. Different spacings between rows and plants, age of seedling at planting, different methods of cultivation and different dates of sowing were the important practices tried.

Ragi : Ragi covered 338* thousand hectares i.e. about 2·6 per cent of the total cropped area. Out of 41 experiments reported, 32 experiments forming 12 groups were concluded during the period under report. Practically all the experiments were conducted under irrigated conditions. Varieties like AKP-6, VZM-2, Co-7 (early) and AKP-2 were used in experiments. The net plot size adopted for experimentation varied from 2·7 m. × 2·7 m. to 8·1 m. × 4·6 m.

Half of the total number of experiments were laid out in Randomised Block Design. 11 experiments were conducted in Split-plot Design and the remaining were laid out equally in Confounded and Latin Square designs. 4 to 6 replications were normally used for experiments laid out in Randomised Block Design and Split-plot Design while for Confounded Design 1 or 2 replications were adopted.

About one third of the experiments were of manurial type. The sources of N in manurial experiments were Urea, Am. Sulphate, Am. Sulphate Nitrate and Cal. Am. Nitrate and those of P and K were Super and Mur. of Potash respectively. The levels of N, P and K applied from 22·4 to 67·2 Kg/ha. for each of the cases.

In cultural experiments dates and methods of sowing, spacing and age of seedlings etc. were the important treatments tried, Besides these, the results of the experiments on control of pests and diseases have been given.

Sugarcane : Sugarcane an important commercial crop of the State, covered 1218* thousand hectares i.e. 8·7 per cent of the total cropped area. Out of 272 experiments reported during the period, 131 experiments forming 49 groups were concluded. Excepting 2, all the experiments were conducted under irrigated conditions. CO-419, CO-527, CO-997, CO-775, CO-737 and CO-975 were the common varieties tried. The net plot area for experimentation varied from 7·3 m. × 3·7 m. to 11·6 m. × 8·0 m.

90 per cent of the total number of experiments were conducted in Randomised Block Design. Split-plot, Latin Square and Confounded designs were adopted in the cases of 15, 7 and 5 experiments. Excepting 12 experiments where more than 7 replications were adopted, almost all the experiments laid out in Randomised Block Design had replications varying between 2 and 6. 7 experiments conducted in Split-plot Design had replications ranging from 1 to 3 while another 7 had 4 to 6 replications. 8 experiments laid out in Confounded Design had 3 replications.

Manurial experiments accounted for 57 per cent of the total number of experiments. N as Am. Sulphate or Urea, P as Super and K as Mur. of Potash were applied in these experiments either alone or in combination. The levels of N tried varied from 0 to 593 Kg/ha. while those of P and K ranged between 0 and 336 Kg/ha. In Cultural experiments dates and methods of planting and harvesting, spacings between plants and rows, seed rates and earthing-up etc , were some of the important treatments tried.

Groundnut : Groundnut covered 1092* thousand hectares i.e 8.6 percent of the total cropped area. 86 experiments forming 30 groups were conducted during the period under report. Out of 108 experiments, about 58 of the experiments were conducted under irrigated conditions. TMV-2, Spanish (improved) and TMU-2 were used in these experiments. TMV-3 and also Spanish (improved) were the varieties mostly used in experiments conducted under rainfed conditions. The net-plot size adopted for experiments laid out in different designs varied from 6.7m × 2.0m. to 10.1m. × 10.1m., 57, 32 and 19 experiments were conducted in Randomised Block, Confounded and Split-plot designs respectively Experiments laid out in Randomised Block Design had replications ranging between 2 and 6. Confounded designs were laid either in single or two replications. 13 experiments laid out in Split-plot Design had replications ranging from 1 to 3 while the remaining 6 had 4 to 6 replications. About 50 percent of the experiments were of manurial type. The level of N tried in these experiments varied between0 and 56.0 Kg/ha. while that of P and K ranged beteen 0 and 67 2 Kg/ha.

Dates of sowing, spacings between rows and plants, types, of Kernals, tillage practices etc. were the important treatments tried in Cultural expetiments.

Cotton : Cotton covered 373* thousand hectares i.e. 2.9 percent of the total cropped area. Out of 157 experiments, 63 experiments forming 28 groups were concluded during the period under report. About half of the experiments were conducted under irrigated conditions. P-216 F and MCU-2 were the varieties commonly used in these experiments. Coorani 6 (early), Cocades, N-14, and Nandiam were the varieties tried in experiments conducted under rainfed conditions. Laxmi variety was commonly used in experiments conducted under irrigated conditions as also under rainfed conditions. The net plot size adopted for experimentation varied between 6.4m × 1.8m to 11.6m × 6.0m. 96, 43 and 18 experiments were laid out in Randomised Block, Split-plot and confounded designs respectively. Experiments laid out in Randomised Block Design had replications 1 to 3 for 10 experiments and more than 7 for the remaining. 36 experiments laid out in Split-plot Designs had replication varying from 4 to 6 and the remaining 7 had 1 to 3 replications. Experiments conducted in Confounded Design were in single or two replications. About 38 percent of the experiments were of manurial types or had manure as one of the factors tested. The level of N tried in these experiments varied between 0 to 224 Kg/ha. while that of P and K ranged between 0 and 67.2 Kg/ha. Besides these, results of experiments with different Cultural practices like, spacing between rows and plants, age of seedlings, topping, irrigational practices and of those to control the pests and diseases have been included in the present volume.

PARTICULARS OF RESEARCH STATIONS AND SOIL ANALYSIS

1. Millet Research Station, Adilabad.

A. General Information :

(i) In Adilabad distt., 6½ Km. from Adilabad Rly. Stn. The general topography of the experimental area is slightly slopy. (ii) Rainfed tract of Telengana. (iii) Established in 1961. (iv) *Jowar*, Cotton, *Jowar*+Red gram, Cotton. (v) To evolve high yielding strains of millets suitable for the tract.

B. Normal Rainfall :

C. Irrigation and Drainage Facilities :

(i) (a) Available since inception, but not utilised. (b) Irrigation by wells. (ii) Natural drainage.

D. Soil type and Soil analysis :

(i) Soil type—Clay loam ; Depth—0·61 m. to 1·22 m. ; Colour—Black ; Structure—Clay loam to Sandy clay loam. (ii) Chemical analysis : PH.—7·3 to 7·5 ; E.C.—0·15 to 0·18 ; OC—low to low medium ; Available P_2O_5-1·0 to 3·0 Kg/ha. (iii) Mechanical analysis : N.A.

E. No. of Experiments :

Jowar—1 ; Total=1.

2. Cotton Research Farm, Adoni.

A. General Information :

(i) In Adoni taluka of Kurnool district, nearest Rly. Stn. Adoni with Lat—14°30′ N/ Long-73°43′ E./Alt.—414·5 m. above m.s.l. Uniformaly levelled lands. Black, red and mixture soils of Rayalaseema. (iii) Established in 1937. (v) *Jowar*—Cotton ; Korra—Cotton. (v) (a) To evolve an early maturing cotton superior to Western—1, (b) Work on American cotton varieties was also taken up as a part of the western cotton scheme. (c) To evolve better Arboreum *Desi* Cotton to replace existing Adonicum in Red and Mixture soils of *Rayalaseema* area under Munjari improvement scheme.

3. Mesta Research Station, Amadalavalasa.

A. General Information :

(i) In Srikakulam taluka of Srikakulam district, 1·5 Km. from Amadalavalasa Rly. Stn. with Lat.—18°24′ N/Long.—83°84′ E/Alt.—274 M. above m.s.l. The topography of the experimental area is flat and levelled. (ii) Rainfed area of Srikakulam and Visakhapatnam. (iii) Established in 1958. (iv) Mesta and groundnut are main crops grown in alternative years. (v) To evolve high yielding varieties.

B. Normal Rainfall :

Information : N.A.

C. Irrigation and Drainage Facilities :

(i) Nil. (ii) Proper drainage system.

D. Soil type and Soil analysis :

(i) Depth—0·91 to 1·82 M. ; Colour—Reddish brown. (ii) Chemical analysis and (iii) Mechanical analysis : N.A.

E. No. of Experiments :

Mesta—16 ; Total=16.

4. Agriculture Research Station/Project Development and Demonstration Farm, Amaravathi.

A. General Information :

(i) In Guntur district, 36 Km. from Guntur Rly. Stn. Moderately slopy towards river Krishna. (ii) Black soil tract of Nagarjuna Sagar Project, right bank. (iii) Established in 1962. (iv) Green manuring crop, paddy in wet soils. Hybrid *Jowar*, hybrid *bajra*, hybrid maize, sunbeeng, groundnut, wheat, black gram, Onion etc. in the irrigated dry Crops. (v) To evolve suitable cropping pattern for irrigated black soils of Nagarjuna Sagar Project and to determine the water requirements of crops and to study the physical, chemical reactions of soils consequent to introductions of different intensities of irrigation.

C. Irrigation and Drainage Facilities

(i) (a) Available since 1964. (b) Electric motor and oil engine. Lift irrigation from Krishna River, Nagarjuna Sagar Canal water from 1967. (iii) Field drains.

D. Soil type and Soil analysis :

(i) Soil type—Clay loams ; Depth—Medium deep to deep (0·91 to 1·82 M). ; Colour—Dark grey brown ; Structure—Top soils : granular to sub-angular blockey. Low layers : platy structure. (ii) Chemical analysis : pH. 8·2 to 8·5 in the Ist 30 cm., 8·5 to 9·4 in 61-122 cm. and suddenly decreases to 7·6 to 7·8 at further depths ; Organic mater 0·5 to 0·6 %, Total N—0·03 to 0·04 ; Available P_2O_5—11·2 to 17·9 Kg/ha. ; Available K_2O-67·2 to 168·1 Kg/ha. (iii) Mechanical analysis : Clay—56·76 % ; Silt—18.65 % ; Fine sand—12·25 % ; Coarse sand—5·78% ; Loss by solution 6·56 %.

E. No. of Experiments :

Paddy—2, Wheat - 3, *Jowar*—1, Maize—19, Cotton—20, Groundnut—9, Variga—1, Onion—3 ; Total=58.

5. Maize Research Station, Amberpeta.

A. General Information :

(i) In Hyderabad taluka of Hyderabad district, 6 Km. from Kachguda Rly. Stn. with Lat.—17° N/Long—78° E/Alt.—51·8 m. The topography of the experimental area is well levelled. (ii) Maize growing tract of A.P. Western telangana. (iii) Established in 1957. (iv) Maize—Fallow—Maize ; Maize—G.N.—Maize ; Maize—Bengal gram—Maize. (v) Co-ordinated Maize Breeding Station.

D. Soil type and Soil analysis :

(i) Broad soil types :—loams ; Depth—deep ; Colour—dark brown ; (ii) Chemical analysis : P.H.—7.0 to 7.2 ; Total N—0.0518% ; O.C.—0.52% ; Available P_2O_5—0.012% ; Available K_2O—0.048%. (iii) Mechanical analysis :—Clay—35.98% ; Silt—17.89% ; Coarse fraction—45.50%.

E. No. of Experiments :

Paddy—15 ; Ragi—5 ; Sugarcane—67 ; Total=87.

7. Onion Research Station, Anantharajupeta.

A. General Information :

(i) In Rajampet teluka of Cuddapah district, 3 km. from Anantharajupeta Rly. Stn. The topography of the experimental area is levelled. (ii) It represents plain tract. (iii) Established in 1935. (iv) Perennial crops. (v) To carry out research on citrus and mango with a view to cater the needs of this Region and thereby placing the future of the fruit industry.

C. Irrigation and Drainage Facilities :

(i) (a) & (b) Lift irrigation from wells since inception. (ii) Sub soil drains and open drains.

D. Soil type and Soil analysis :

(i) Broad soil types—Red sandy loams. (ii) Chemical analysis and mechanical analysis : Details : N.A.

E. *No. of Experiments* :

Onion—21 ; Toeal=21.

8. Soil Conservation Research Station, Ananthapur.

A. General Information :

(i) In Ananthapur taluka of Ananthapur district, 16 km. from Ananthapur Rly. Stn. with Lat—14° 41′ N/Long.—77° 40′ E/Alt.—345.9m. above m.s.l. The topography of the experimental area is slopy. (ii) It represents-Semi-Arid zone tract. (iii) Established in 1964. (iv) Groundnut-Jowar-Setaria. (v) To devise methods for prevention of loss of fertile top soils, conservation of moisture in the soil for crop use during dry period. Restoration and maintanance of soil fertility. Mainly concerned with soil and moisture conservation problems in Red soils of A.P.

B. Normal Rainfall:

Information—N.A.

C. Irrigation and Drainage Facilities :

(i) No. irrigation facilities. (ii) Natural drainage system exists.

D. Soil type and Soil analysis :

(i) Broad soil types-Red soils, Depth-0 to 23 cm. ; Colour-red and reddish brown ; Structure-loose gravely. (ii) Chemical analysis : P_H.-6.6 to 6.9. ; Total CaO-0.126 to 0.36% ; $K_2$0-0.092 to 0.163% ; Total P_2O_5-0.009 to 0.033% ; O.C.-0.36 to 0.54%. (iii) Mechanical analysis : Gravel-12 to 23% ; Coarse sand-37 to 55% ; Fine sand-30 to 37% ; Silt-2.60 to 5.80% ; Clay-7.56 to 15.50%.

E. No. of Experiments :

Jowar—5, Groundnut—3, Mixed cropping-2 ; Total=10.

9. Exploratory-cum-Demonstration Farm. Araku valley

A. General Information:

(i) In Paderu taluka of Visakhapatnam district, 88 Km. from Kothavasla Rly. Stn. at an altitude of 938·8 M. above m.s.l. The topography of the experimental area is hilly, and slopy. (ii) It represents hilly and slopy tract. (iii) Established in 1944. (iv) Wet land-Paddy-G.N. ; Dry land-Ragi, niger, *Jowar*, Maize and hill redgram ; Garden land-Sugarcane and vegetables demonstration work.

22. Regional Oilseed Research Station, Kadiri.

A. General Information :

(i) In Kadiri taluka of Ananthapur district. Lat.-14 75° N. Long.—78 10°E, and altitude 613 m. above m.s.l. Bunding was done along the contours. Previously this farm was at Ananthapur. (ii) The soil and seasonal conditions obtainable on the station are mostly representative of the entire Rayalaseema region. (iii) Established in 1958. (iv) Groundnut,

castor, gingelly and safflower are the main crops in the cropping pattern. (v) To bring about improvement in oilseed crops of Rayalaseema region by evolving short duration, drought resistant varieties with high yield and oil content in the major oilseed crops, viz., groundnut and castor, besides advocating improved agronomic practices for general adoption by the ryots of the tract.

Maize—19 ; Total=19.

24. Agriculture Research Station/Sesamum Research Station, Karimnagar.

A. General Information :

(i) and (ii) Same as Maize Res. Stn., Karimnagar. (iii) Established in 1959. (iv) Sesamum-fallow. (v) To evolve a high yielding variety with high oil content suitable for late sowing in sandy loams and to determine optimum cultures to get maximum yield.

B. Normal Rainfall :

Annual rainfall about 81 cm. Details—N.A.

C. Irrigation and Drainage Facilities :

(i) (a) and (b) : No irrigation facilities. (ii) No drainage system.

D. Soil type and Soil analysis :

(i) Broad soil type-Sandy loams ; Depth-10 cm. : Colour—Red ; Structure-loose. (ii) Chemical analysis : 6·8 to 7·3 ; Ec-0·15 to 0·18 ; OC—Very low to Medium high ; Available P_2O_5-2·01 to 70·6 Kg/ha. (very low to high). (iii) Mechanical analysis : N.A.

E. No. of Experiments :

41. Regional Agricultural Research Station, Rudrur.

A. General Information :

(i) In Bodhan taluka of Nizamabad district at a disiance of 10 Km. from Bodhan railway station with Lat. 18°38′ N/Long 77°51′ E/Alt. 404 m. above m.s.l. This station is situated on the western slope of a ridge. Ridges and valleys are met with alternately in this tract. In the upper land on the slopes of these hills and ridges are lighter *chalka* soils, reddish brown in colour and in the valley and lower part of the slopes, the heavier soils, clay loam are met. (ii) This station is situated in the heart of the Nizamsagar ayacut and is typical of the zone it represents. (iii) Established in 1932. (iv) Paddy after paddy and sugarcane after sugarcane are generally grown. More recently mosoon paddy followed by a light irrigated crop like groundnut in the summer crop season is being taken. (v) Research is undertaken on sugarcane, paddy, groundnut, vegetables, cotton and fruit crops on the agronomic, varietal, entomological and chemical aspects.

42. Fruit Research Station, Sangareddy.

A. General Information :

(i) In Sangareddy taluka of Medak district, at a distance of 22·4 Km. from Shankarpalli railway station. The experimental area under Annonancea and mango fruits is of red *chalka* type in levelled and terraced plots while that under *regur* type is a levelled land. Lat.—17°37′ N/Long.—78° 5′ E. (ii) Represents a predominantly red loam (*chalka*) soil with black or *regur* soil area and low lying lands suitable for paddy to a limited extent. (iii) Established in 1947. (iv) Being a fruit research station no particular crop rotation is followed. However, chillies and vegetable like Bhindi, Brinjal, Tomato, Cluster bean in *kharif* and *rabi*, *jowar* and *rabi* paddy to a limited extent are grown for seed multiplication. (v) Manurial, cultural and breeding trials for the selection of promising strain of chillies and vegetables and to conduct root stock propagation, manurial and cultural trials for evolving superior varieties of mango and *sitaphal*.

D. Soil type and Soil analysis :

(i) Soil type—Heavy Black soils ; Depth—Deep ; Colour—Black ; Structure—Loamy. (ii) Chemical analysis : N—Medium to high, P_2O_5—Low to medium ; K_2O—High ; pH.—Ideal (7·0). (iii) Mechanical analysis : N.A.

E. No. of Experiments :

Paddy—65, Sugarcane—18 ; Total=83.

44. Banana Research Station/Sugarcane Liaison Farm, Tanuku.

A. General Information :

(i) In Tanuku taluka of West Godavari district, 3 Km. from Tanuku Rly. Stn. with Lat.—18°35′ to 18°52′ N/Long.—81°33′ to 81°35′ E/Alt.—8·5 m. above m.s.l. The topography of the experimental area is extremely uneven and low lying. (ii) Fertile, alluvial clays of Godavari delta with Calcium nodules. (iii) Established in 1958. (iv) Paddy—Sugarcane. (v) To test the recommendations from the Sugarcane Research Station, Anakapalle for their suitabilities in the particular region and to tackle local problems.

C. Irrigation and Drainage Facilities :

(i) (a) and (b) : Canal from Godavari river. (ii) Exists but not efficient. Stagnated water will be pumped out by oil engines.

D. Soil type and Soil analysis :

(i) Soil types—Alluvial ; Depth—Very deep ; Colour—Greenish black. (ii) Chemical analysis : pH.—7·2 to 8·0. (iii) Mechanical analysis : N.A.

E. No. of Experiments :

Sugarcane—44, Banana—15 ; Total=59.

45. Rice Research Station, Tenali.

A. General Information :

(i) In Tenali taluka of Guntur district, 2 Km. from Tenali Rly. Stn. with Lat.—16° 15′ N/Long.—80° 38′ E/Alt.—11 m. above m.s.l. Well levelled topography. (ii) It represents Krishna Western Delta tract. (iii) Established in 1964. (iv) Paddy—Pulses. (v) To evolve suitable rice varieties that are resistant to Stem borer and to conduct Research on Agronomical, Cultural and Entomological problems connected with the control of Stem borer.

B. Normal Rainfall :

Details—N.A.

C. Irrigation and Drainage Facilitis :

(i) (a) and (b) : Irrigation by Krishna canal from the begining. (ii) Restricted Drainage.

D. Soil type aud Soil analysis :

(i) Soil types—Black Clay loam : Depth—upto 1·82 m. ; Colour—Black. (ii) Chemical analysis : pH.—7·8 to 8·5 ; EC—0·50 to 0·90 : OC—0·36 to 0·69 ; Available P_2O_5—2·2 to 30·3 Kg/ha. (iii) Mechanical analysis : N.A.

E. No. of Experiments :

Paddy—5, Cotton—7 ; Total=12.

46. Rice Research Station, Utukur

A. General Information :

(i) In Cuddapah taluka of Cuddapah district, 8 Km. from Cuddapah Rly. Stn. (ii) Rayalaseema tract. (iii) Established in 1956. (iv) Paddy—Paddy. (v) Evolution of improved strains of rice under lift irrigation of Rayalaseema tract.

B. Normal Rainfall :

Details—N.A.

C. Irrigation and Drainage Facilities :

(i) (a) and (b) : Lift irrigation available from 1960. (ii) No drainage facilities.

D. Soil type and Soil analysis :

(i) Soil type—Red loamy ; Depth—1.82 to 2.44 M. ; Colour—Red ; Structure—Loose.

E. No. of Experiments :

Paddy—3 ; Total=3.

47. Millets Research Station, Vizianagaram.

A. General Information :

(i) In Vizianagaram taluka of Vizag district, 3 Km. from Vizianagaram with Lat.—18°07′ N/Long.—83°27′ E/Alt.—96.9 M. above m.s.l. The topography of the experimental area is levelled. (ii) Red sandy loam tract. (iii) Established in 1954. (iv) Millets followed by pulses. G N followed by millets. (v) Evolution of hybrids and strains in Ragi. Bajra and Jowar.

B Normal Rainfall :

Ditails—N.A.

C. Irrigation and Drainage Facilities :

(i) (a) and (b) : Well fitted with oil engine. Available since inception. (ii) Yes, proper drainage exists.

D. Soil type and Soil analysis :

(i) Soil types—Red sandy loams ; Depth—1.68 m. (ii) pH.—7.5 to 8.1 ; Soluble salts E.C. 0.2 to 0.3 ; O.C.—0·36 to 0·6 % ; Available P_2O_5—28·86 Kg/ha (iii) Mechanical analysis ; N.A.

E No. of Experiments :

Jowar—2, *Bajra*—2, *Ragi*—10 ; Total=14.

48. Sugarcane Liaison Farm, Vuyyur.

A. General Information :

(i) In Gannavaram taluka of Krishna district. 16 Km. from Indupalli Rly. Stn. with Lat.—16·4° N/Long—81° E/Alt —34·4 M. above m.s.l. The topography of the experimental area is plain. (ii) It represents Krishna Delta tract. (iii) Established in 1958. (iv) Sugarcane—Paddy. (v) Agronomical experiments on sugarcane.

C. Irrigation and Drainage Facilities :

(i) (a) and (b) Lift irrigation from Krishna Canal since inception. (ii) Natural drainage exists.

D. Soil type and Soil analysis :

(i) Soil type—Loamy ; Depth—1·32 to 2·44 m. ; Colour—Black. (ii) Chemical analysis pH.—7·2 to 8·3 ; Soluble E.C.—0·30 to 0·35 % ; Organic carbon—0·67 to 0·74 % ; Available P_2O_5—12·3 to 71·7 Kg/ha. (iii) Mechanical analysis : N.A.

E. No. of Experiments :

Sugarcane—29 ; Total=29.

49. Agriculture Research Station, Warangal.

A. General Information :

(i) In Warangal taluka of Warangal district, 8 Km. from Warangal Rly. Stn. with Lat.—17°68′ N/Long.—79°20′ E/Alt.—268·5 m. above m.s.l. The topography as a whole is rolling since the station comprises of many blocks (ii) Eastern Telangana Region comprising of Warangal, Khammam, Nalgonda, Krimnagar and Adilabad distt. (iii) Established in 1933. (iv) (a) *Kharif* Wet Land ; Paddy—G.N. ; Dry Red gram—G.N. ; *Rabi*—Horse gram ; (b) Tabacco—Tabacco. (v) To evolve all fly resisting varieties. To study the rice Stemborer To study the improvement of Jowar at the Warangal region.

(i) (a) and (b) Two rainfed tanks and wells exist since inception. (ii) No. proper drainage system. exists.

D. Soil type and Soil analysis :

(i) Soil types—Black soils ; Depth—Deep ; Colour—Black ; Structure—Loamy. (ii) Chemical analysis : pH.—7·0 to 8·2 ; E.C.—0·150 to 0·900 ; Available P_2O_5—0·9 to 38·5 Kg/ha. Available K_2O—56 to 560 Kg/ha. (iii) Mechanical analysis ; N.A.

E. No. of Experiments :

Paddy—46, Maize—1, Red gram—6, Tobocco—5, Groundnut—4 ; Total=62.

50. Rice Research Station, Wyra.

A. General Information :

(i) In Khammam district, nearest Rly. Stn. is Khammam. (ii) It represents Black soil tract. The topography of the experimental area is levelled. (iii) Established in 1958. (iv) paddy—Paddy. (v) To select and study the suitability of improved varieties in rice for the tract.

B. Normal Rainfall :

C. Irrigation and Drainage Facilities :

(i) (a) and (b) Irrigation from Wyra reservoir, available since inception. (ii) Natural drainage exists.

D. Soil type and Soil analysis :

(i) Soil types—Black clay soils. (ii) Chemical analysis and (iii) Mechanical analysis : N.A.

E. No. of Experiments :

Paddy—5 ; Total=5.

51. Sugarcane Liaison Farm, Yelamanchili.

A. General Information :

(i) In Elamanchili taluka of Visakhapatnam district, 14 Km. from Elamanchili Rly. Stn. The topography of the experimental area is slopy. (ii) Clay loam soil tract (iii) Established in 1962. (iv) Paddy—Sugarcane. (v) To test whether the results of the Sugarcane Res Stn , Anakapalle suits the tract and to tackle the local problems.

B. Normal Rainfall :

Same as Oil seed Sub—Station, Yelamanchilli.

C. Irrigation and Drainage Facilities :

(i) (a) and (b) Electric Motor available since inception. (ii) Drainage channels made every year.

D. Soil type and Soil analysis :

(i) Soil type—Clay loam ; Depth—1·83 to 2·13 m. ; Colour—Red ; Structure—Brown. (ii) Chemical analysis and (iii) Mechanical analysis ; N.A.

E. No. of Experiments :

Sugarcane—16 ; total=16.

52. Oil Seed Sub—Station Yelamanchili.

A. General Information :

(i) In Yelamanchili taluka of Vasakhapatnam district, 4·8 Km. from Yelamanchili Rly. Stn. The topography of the experimental area is slightly slopy from West to East. (ii) Sandy loam soil tract. (iii) Established in 1959. (iv) *Kharif* GN/Til ; *Rabi* Horsegram. (v) To evolve high yielding and high oil contains strains in groundnut and gingelly suitable for the tract and to advocate improved agronomic practices to the locality.

Object : To study the effect of Thomas Phosphate in comparison with Single Super Phos.

1. BASAL CONDITIONS :

(i) (a) Paddy—Paddy. (b) Paddy. (c) N.A. (ii) *Chalka*. (iii) 29.7.65. (iv) (a) 4 ploughings and 2 puddlings. (b) Transplanting. (c) 25 Kg/ha. (d) 15 cm.×15 cm. (e) 2 (v) As per treatments. (vi) HR—35. (vii) Irrigated. (viii) Weeding with japanese weeder on 28.8.65, one hand weeding during Sept. 65. (ix) N.A. (x) Oct. 65.

2. TREATMENTS:

T_0=Control, T_1=Super single dose at 34 Kg/ha. of P_2O_5, T_2=Super double dose at 67 Kg/ha. of P_2O_5, T_3=Control, T_4=Control, T_5=Thomas Phosphate single dose at 34 Kg/ha. of P_2O_5, T_6=Thomas Phosphate double dose at 67 Kg/ha, of P_2O_5.

T_3+T_4 were treated as control as the Indian Basic Slag was N.A.

3. DESIGN:

Crop :- Paddy (*Dalwa*). **Ref :- A.P. 60(2).**

Site :- Rice. Res. Sub-Stn., Pulla. **Type :- 'M'.**

Object :—To study the effect of different levels of N, P and K on Paddy.

1. BASAL CONDITIONS :

(i) (a) Paddy-Paddy. (b) Paddy. (c) 112 Kg/ha. of Super+56 Kg/ha. of C/A/N. (ii) Clay. (iii) 2.1.60/16.2.60. (iv) (a) 3 puddlings. (b) Transplanting. (c) 34 Kg/ha. (d) N.A. (e) 2. (v) Nil. (vi) PLA-1 (early). (vii) Irrigated. (viii) Weeding. (ix) 4·4 cm. (x) 10.5.60.

2. TREATMENTS :

Main-plot treatments :

All combinations of (1) and (2)

(1) 2 levels of N as A/S : N_1=50·6 and N_2=67·3 Kg/ha.

(2) 2 levels of P_2O_5 as Super : P_1=50·6 and P_2=67·3 Kg/ha.

Sub-plot treatments :

3 levels of K_2O : K_0=0, K_1=33·6 and K_2=67·3 Kg/ha.

3. DESIGN :

(i) Split-plot. (ii) (a) 4 main-plots/replication and 3 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) 3·1 m.×6·1 m. (b) 2·7 m.×5·8 m. (v) 15 cm.×15 cm. (vi) Yes.

4. GENERAL :

(i) Normal. (ii) The crop was severely attacked by Blast. Control measures were taken. (iii) Tiller counts and yield of grain. (iv) (a) 1960-only. (b) and (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 635 Kg/ha. (ii) (a) 315·0 Kg/ha. (b) 171·0 Kg/ha. (iii) None of the effects is significant. (iv) Av. yield of grain in Kg/ha.

Object :—To find out the best manurial combination which will give higher yields.

1. BASAL CONDITIONS :

(i) (a) Paddy-Paddy. (b) Paddy. (c) 56 Kg/ha. of C/A/N and 112 Kg/ha. of Super. (ii) Clay loams. (iii) 14.6.60/14.7.60. (iv) (a) Thorough puddling with country plough, weeding and levelling. (c) 33·6 Kg/ha. (d) 20 cm.×15 cm. (e) 2. (v) Nil. (vi) PLA-2. (vii) Irrigated. (viii) Hand weeding twice. (ix) 117·5 cm. (x) 29.12.60.

2. TREATMENTS :

All combinations of (1), (2) and (3).

(1) 2 levels of N as A/S: N_1=16·8 and N_2=33·6 Kg/ha.

(2) 2 levels of P_2O_5 as Super : P_0=0 and P_1=33·6 Kg/ha.

(3) 3 levels of K_2O as Mur. Pot. : K_0=0, K_1=33·6 and K_2=67·2 Kg/ha.

Fertilizers were applied by soil application at planting.

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 12. (b) N.A. (iii) 4. (iv) (a) 6·1$_4$ m.×4·6 m. (b) 5·8 m.×4·3 m. (v) 15 cm.×15 cm. (vi) Yes.

4. GENERAL :

(i) Low yields due to flood damage. (ii) Nil. (iii) Tiller counts, height measurements and grain yield. (iv) (a) 1960—61. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 2372 Kg/ha. (ii) 70·7 Kg/ha. (iii) None of the effects is significant. (iv) Av. yield of grain in Kg/ha.

(i) (a) Paddy-Paddy. (b) Paddy. (c) Nil. (ii) Alluvial soil. (iii) 1.11.61/23.12.61. (iv) (a) Ploughing and puddling. (b) Transplanting. (c) N.A. (d) 20 cm.×10 cm. (e) 2. (v) Nil. (vi) *Eswara Kora* (short duration). (vii) Irrigated. (viii) Weeding. (ix) 113 cm. (x) 26,27.3.62.

2. TREATMENTS :

Main-plot treatments :

4 phosphatic fertilizers: S_1=Super., S_2=Mono-Ammo. Phos., S_3=Nitro.-Phos (O.D.D.A.) and S_4=Rock Phos.

Sub-plot treatments :

4 soil Amendments : T_0=Control (No amendment), T_1=1120 Kg/ha. of G.L. organic matter T_2=1120 Kg/ha. of F.Y.M. and T_3=Phospho-bacterin.

Dose of P_2O_5 N.A.

3. DESIGN :

(i) Split-plot. (ii) (a) 4 main—plots/rep. and 4 sub-plots/main—plot. (b) N.A. (iii) 6. (iv) (a) and (b) 1/494·2 ha. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Paddy Blast observed, Precautionary measures were taken to prevent attack of Stem borer. (iii) Biometric data and yield of grain. (iv) 1961-only. (b) and (c) Nil. (v) Rallapadu and Yemmiganur. (vi) Heavy rains affected the crop. (vii) Nil.

5. RESULTS :

(i) 4634 Kg/ha. (ii) (a) 491·0 Kg/ha. (b) 329·0 Kg/ha. (iii) None of the effects is significant. (iv) Av. yield of grain in Kg/ha.

C.D. for body of table=100·8 Kg/ha.

Crop :- Paddy (*Kharif*). **Ref :- A.P. 64(208), 65(173).**

Site :- Agri. Res. Stn; Tenali. **Type :- 'M'.**

Object :—To study the effect of N, P and K on the incidence of Stem borer.

1. BASAL CONDITIONS :

(i) (a) Paddy-Pulses-Fallow. (b) Fallow. (c) Nil. (ii) Black loam to clay. (iii) 17.7.64/7.8.64 ; 24.5.65/21.7.65, (iv) (a) 1 to 2 ploughings with country plough and puddling. (b) Transplanting. (c) 37 Kg/ha. (d) 20 cm.×20 cm. (e) 2. (v) Nil. (vi) MTU-19. (vii) Irrigated. (viii) Hand weeding. (ix) 9 cm. for 64; N.A. for 65. (x) 16.12.64 ; 12.12.65.

2. TREATMENTS :

All combinations of (1), (2) and (3).

(1) 2 levels of N as A/S : N_0=0 and N_1=45 Kg/ha.

(2) 2 levels of P_2O_5 as Super: P_0=0 and P_1=67 Kg/ha.

(3) 2 levels of K_2O as Mur. Pot. : K_0=0, and K_1=67 Kg/ha.

N.B. N applied in 2 equal doses $\frac{1}{2}$ dose at planting and $\frac{1}{2}$ dose 1 month after planting. Super. and Mur. Pot. applied as basal dressing.

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 8. (b) N.A. (iii) 4. (iv) (a) 11·8 m.×9·9 m. (b) 11·0 m.×9·1 m. (v) 40 cm.×40 cm. (vi) Yes.

4. GENERAL :

(i) Normal for 64, Poor for 65. (ii) Incidence of Stem borer for 64. Very severe incidence of Stem borer at ear head stage for 65. (iii) Grain yield. (iv) (a) 1964—66. (b) No. (c) Nil.(v) to (vii) Nil.

5. RESULTS :

64(208)

(i) 1365 Kg/ha. (ii) 178·0 Kg/ha. (iii) Main effect of N is highly significant and P×K interaction is significant. (iv) Av. yield of grain in Kg/ha.

Object :—To study the effect of different sources of phosphatic fertilizers with different types of soil amendments on Paddy.

1. BASAL CONDITIONS :

(i) (a) Paddy-Paddy. (b) Paddy. (c) Nil. (ii) Black cotton soil. (iii) 10.10.61/21.11.61. (vi) (a) Ploughings and Puddling. (b) Transplanting. (c) N.A. (d) 20 cm. × 10 cm. (e) 2. (v) Nil. (vi) PLA-1 (medium). (vii) Irrigated. (viii) Weeding. (ix) 55 cm. (x) 9.3.62.

2. TREATMENTS :

Main-plot treatments :

4 phosphatic fertilizers : S_1=Super., S_2=Mono-Ammo. Phos., M_3=Nitro-Phos. (O.D.D.A.) and S_4=Rock Phos.

Sub-plot treatments :

4 soil amendments : T_0=Control (No amendment), T_1=1121 Kg/ha. of G.L., T_2=1121 Kg/ha. of F.Y.M. and T_3=Phospho bacterin.

Dose of P_2O_5 : N.A.

3. DES IGN :

(i) Split-plot. (ii) (a) 4 main-plots/replication, 4 sub-plots/main-plot. (b) N.A. (iii) 9. (iv) (a) 1/233·1 ha. (b) 1/247·1 ha. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Normal. (ii) Endrin sprayed. (iii) Biometric data and yield of grain. (iv) (a) 1961—only. (b) and (c) Nil. (v) Rallapadu and Samalkot. (vi) and (vii) Nil.

5. RESULTS :

(i) 1976 Kg/ha. (ii) (a) 706·0 Kg/ha. (b) 507·0 Kg/ha. (iii) Main effect of T is highly significant. (iv) Av. yield of grain in Kg/ha.

Object :—Type II : To study the effect of N, P, K and F.Y.M. on the yield of Paddy.

1. BASAL CONDITIONS :

(i) N.A. (ii) Sandy loam. (iii) 9.9.63 ; 24.7.64. (iv) (a) N.A. (b) Transplanting. (c) to (e) N.A. (v) Nil. (vi) MTU—15(135 days). (vii) Irrigated. (viii) and (ix) N.A. (x) 3.12.63 ; 22.10.64.

2. TREATMENTS :

All combinations of (1), (2), (3) and (4).

(1) 3 levels of N as A/S : N_0=0, N_1=33·6 and N_2=67·2 Kg/ha.
(2) 3 levels of P_2O_5 as Super : P_0=0, P_1=33·6 and P_2=67·2 Kg/ha.
(3) 3 levels of K_2O as Mur. Pot. : K_0=0, K_1=33·6 and K_2=67·2 Kg/ha.
(4) 2 levels of F.Y.M. : F_0=0, F_1=56·4 Kg/ha.

Super; F.Y.M. and Mur. Pot. were applied in one dose before puddling (18.7.60) and A/S was applied in two doses 3 and 6 weeks after planting.

5. DESIGN :

(i) $3^3 \times 2$ confd. (ii) (a) 9 plots/block, 6 blocks/replication. (b) N.A. (iii) 1. (iv) (a) 15·1 m. × 10·1 m. (b) 10·1 m. × 8·1 m. (v) 2·5 m. × 1 m. (vi) Yes.

N applied as A/S, P_2O_5 as Super and K_2O as Mur. Pot.

3. DESIGN :

(a) and (ii) A selected district is divided into four agriculturally homogeneous zones based on climate, soil, cropping pattern, etc. In each zone one block is selected at random. A block normally consists of a group of 50-100 villages. In each block 36 experiments are conducted in a year of which 11 are of type A_1, 11 of type A_2, 11 of type A_3 and 3 are of type C. The eleven experiments under type A_1, A_2 and A_3 are distributed as 3 on a *Kharif* cereal, 3 on a *rabi* cereal, 3 on a cash crop and 2 on oilseed. All the three type—C experiments are conducted on a legume crop. For the purpose of conducting the A_1, A_2 and A_3 experiments 11 villages are randomly selected in each block and in each village 3 experiments one each of type A_1, A_2 and A_3 are laid out. For conducting the three type C trials three villages are randomly selected in each block. (iii) (a) 1/100 ha. (b) 1/200 ha. (iv) Yes.

Site :- District : Chittoor, Guntur, Krishna, Nellore, Srikakulam, Visakhapatnam, Hyderabad, Warangal, Mehboobnagar, Karimnagar.

Type :- 'M'.

Object:—To study the response curve of important cereals, oil seeds and cash crops to Phosphorous applied singly and in combination with other nutrients.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) Deep black for Guntur, red and black for Krishna red sandy for others. (iii) to (vi) N.A. (vii) Irrigated. (viii) to (x) N.A.

2. TREATMENTS :

N_0 =Control (no manure).
N_1 =35 Kg/ha. of N.
P_1 =35 Kg/ha. of P_2O_5.
P_2 =70 Kg/ha. of P_2O_5.
N_1P_1 =35 Kg/ha. of N+35 Kg/ha. of P_2O_5.

$N_2P_2K_2$=70 Kg/ha. of N+70 Kg/ha. of P_2O_5+70 Kg/ha. of K_2O.
N applied as A/S, P_2O_5 as Super and K_2O as Mur. Pot.

3. DESIGN :

Same as in expt. no. 64 (S.F.T.) for Karimnagar for Paddy (*Kharif*). on page 172.

4. GENERAL :

(i) to (iii) N.A. (iv) (a) 64 for Karimnagar 62 to 66 (63 N.A.) for Warangal 63 to 65 for Mehboobnagar, 62 to 65 for Chittoor, Visakhapatnam. Hyderabad, 62 to 66 for others. (v) to (vii) N.A.

District : Chittoor, Guntur, Krishna, Nellore, Srikakulam, Visakhapatnam, Hyderabad, Karimnagar, Warangal, Mehboobnagar.

Object :—To study the response curve of important cereals, oil seeds and cash crops to Potash applied singly and in combination with other nutrients.

1. BASAL CONDITIONS

(i) N.A. (ii) Deep black for Guntur, Red and black for Krishna, Red sandy for others. (iii) to (vi) N.A. (vii) Irrigated. (viii) to (x) N.A.

2. TREATMENTS:

N_0 =Control (No manure).
N_1 =35 Kg/ha. of N.
K_1 =35 Kg/ha. of K_2O.
K_2 =70 Kg/ha. of K_2O.
N_1K_1 =35 Kg/ha. of N+35 Kg/ha. of K_2O.
N_1K_2 =35 Kg/ha. of N+70 Kg/ha. of K_2O.
N_2K_2 =70 Kg/ha. of N+70 Kg/ha. of K_2O.
$N_1P_1K_1$ =35 Kg/ha. of N+ 35 Kg/ha. of P_2O_5+35 Kg/ha. of K_2O.
N applied as A/S, P_2O_5 as Super and K_2O as Mur. Pot.

3. DESIGN :

Same as in expt. no. 64 (S.F.T.) for Karimnagar for Paddy (Kharif). on page 172.

4. GENERAL :

(i) to (iii) N.A. (iv) 63 to 65 for Mehboobnagar, 62 to 66 (63 N.A.) for Warangal, 62 to 64 (63N.A.) for Karimnagar, 62 to 64 for Visakhapatnam, 62 to 65 for Chittoor, 1962 to 66 for others. (v) to (vii) N.A.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) *Pillipesara* for 64 ; Fallow for 65. (c) Nil. (ii) Black soil. (iii) 18.5.64/7.6.64 ; 20.5.65/5.7.65. (iv) (a) Dry ploughing and puddling with country plough. (b) Transplanting. (c) N.A. (d) 20·3 cm.×15·2 cm. (e) 3 for 64 ; 2 for 65. (v) Nursery was given a common basal dressing of 123·6 C.L./ha. F.Y.M. ; 22·4 Kg/ha. of N as A/S, 112·1 Kg/ha. of P_2O_5 as Super, 56·0 Kg/ha. of K_2O as Mur. Pot. (vi) As per treatments. (vii) Irrigated. (viii) Hand weeding. (ix) and (x) N.A.

2. TREATMENTS :

Main-plot treatments :

All combinations of (1), (2) and (3)

(1) 3 levels of N as A/S : N_0=0, N_1=33·6 and N_2=67·2 Kg/ha.
(2) 3 levels of P_2O_5 as Super: P_0=0, P_1=33·6 and P_2=67·2 Kg/ha.
(3) 3 levels of K_2O as Mur. Pot. ; K_0=0, K_1=33·6 and K_2=67·2 Kg/ha.

Sub-plot treatments :

2 varieties : V_1=MTU—10 and V_2=GEB—24.

N was given in two equal doses. 1st just half before transplanting and 2nd half one month after transplanting P_2O_5 and K_2O were applied in the final puddling.

3. DESIGN :

(i) Split-plot confd. (ii) (a) 9 main-plot/block ; 3 blocks/replication and 2 sub-plot/main-plot. (b) N.A. (iii) 2. (iv) (a) 8·8 m.×5·5 m. (b) 8·4 m.×5·2 m. (v) 20 cm.×15 cm. (vi) Yes.

(i) (a) Paddy—Paddy. (b) Paddy. (c) N.A. (ii) Clay loam. (iii) 27.5.63/As per treatments. (iv) (a) 3 puddlings with country plough, removing of weeds and spreading of clods, trimming of bunds and digging of corners. (b) Transplanting. (c) 49·4 Kg/ha. (e) 20 cm.×10 cm. (e) 2. (v) 50·4 Kg/ha. of N as A/S+33·6 Kg/ha. of P_2O_5 as Super+33·6 Kg/ha. as Mur. Pot. (vi) As per treatments. (vii) Irrigated. (viii) 2 hand weedings. (ix) 109·0 cm. (x) 7.12.63.

2. TREATMENTS :

All combinations of (1) and (2)

(1) 4 varieties : V_1=PLA—2, V_2=PLA—4, V_3=SLO—13 and V_4=AR. 108—1

(2) 3 dates of planting : D_1=25.6.63 (early), D_2=6.7.63 (normal) and D_3=15.7.63 (late).

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 12. (b) 11·4 m.×12·7 m. (iii) 4. (iv) (a) 6·1 m.×1·5 m.. (b) 6·1 m.×1·5 m. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Good. (ii) The early planted units have established well except SLO—13 which suffered badly due to Paddy Blast. (iii) Yield of grain and straw. (iv) (a) 1962—63. (b) No. (c) N.A. (v) N.A. (vi) Nil. (vii) The early and normal planting were able to resist the first floods received in Aug, 63. Both normal and late planted units were badly damaged by the second flood recieved in Oct, 63.

5. RESULTS :

(i) 477·1 Kg/ha. (ii) 210·3 Kg/ha. (iii) Main effects of D and V are highly significant. (iv) Av. yield of grain in Kg/ha.

(i) (a) Paddy-Paddy. (b) Paddy. (c) 50·4 Kg/ha. of N as A/S+25·2 Kg/ha. of P_2O_5 as Super. (ii) Balck soil. (iii) 17.6.61/23.7.61. (iv) (a) One dry ploughing and 3 puddlings. (b) Transplanting. (c) 37 Kg/ha. (d) 15 cm. × 15 cm. (e) 2 to 3. (v) 67·2 Kg/ha. of N as A/S+33·6 Kg/ha. of P_2O_5 as Super. (vi) RDR-4 (late). (vii) Irrigated. (viii) 1 hand weeding. (ix) 105 cm. (x) 2.12.61.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no 60(129) on, page 317.

4. GENERAL :

(i) Satisfactory. (ii) Incidence of Stem borer at planting by uprooting 100 seedlings at random in nursery and examined them for infestation. Dead hearts production during growth. (iii) Yield of grain. (iv) (a) 1960-61. (b) No. (c) Nil. (v) to (vii) Nil.

5 RESULTS :

Grain yield

(i) 2592 Kg/ha. (ii) 169·0 Kg/ha. (iii) Treatment difference is not significant. (iv) Av. yield of grain in Kg/ha.

Treatment	T_0	T_1
Av. yield	2594	2589

Infestation of dead hearts

(i) 10·34 degrees. (ii) 2·99 degrees. (iii) Treatment difference is not significant. (iv) Mean % infestation in degrees.

Treatment	T_0	T_1
Mean infestation in degrees	10·01	10·67

Object :—To study the effect of different levels of N, P, K on different varieties of Maize.

1. BASAL CONDITIONS :

(i) (a) Maize—Maize. (b) Maize. (c) N.A. ; as per treatments for 63. (ii) Red chalka. (iii) 7.7.72 ; 28.6.63. (iv) (a) 3 ploughings and marking of ridges. (b) Hand dibbling. (c) 14·8 Kg/ha. (d) 61 cm × 30 cm. (e) 1. (v) Nil. (vi) As per treatments. (vii) Irrigated. (viii) Thinning and hand weeding. (ix) 74·2 cm. 86·5 cm. (x) 23.10.62 ; 12.19.63.

2. TREATMENTS :

Main-plot treatments :

2 varieties : V_1=Deccan hybrid and V_2=Local.

Sub-plot treatments :

All combinations of (1), (2) and (3)

(1) 5 levels of N as A/S : N_0=0, N_1=44·8, N_2=89·7, N_3=134·5 and N_4=179·3 Kg/ha.

(2) 3 levels of P_2O_5 as Super : P_0=0, P_1=44·8 and P_2=89·7 Kg/ha.

(3) 2 levels of K_2O as Mur. Pot. : K_0=0 and K_1=89·7 Kg/ha.

P and K applied on 3.7.62, N applied in 3 doses one before flowering, one at knee high stage and the last dose at tasseling stage.

3. DESIGN :

(i) Split-plot. (ii) (a) 2 main-plots/replication and 30 sub-plots/main-plot. (b) 36·6 m × 9·1 m. for 62 ; N.A. for other. (iii) 4. (iv) (a) 3·7 m. × 3·1 m. for 62 ; 6·1 m. × 3·7 m. for other. 2. TREATMENTS :

Main-plot treatments : :

2 levels of irrigation : I_1=2 and I_2=3 acre inches.

Sub-plots treatments :

No. of irrigations : F_1=2 irrigations at tasseling stage and 2 at maturity stage, F_2=3 irrigations at tasseling stage and 3 at maturity stage, F_3=4 irrigation at tasseling stage and 4 at maturity stage.

Sub-sub-plot treatments :

3 levels of N : N_0=0, N_1=56 and N_2=112 Kg/ha.
$\frac{1}{3}$ N at sowing; $\frac{1}{3}$ N at knee high stage and $\frac{1}{3}$ N 10 days before tesseling.

Object :—To find out the optimum spacing and manurial doses for the economic and successful production of Lady's Finger.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Brinjal for 60 ; Field bear for 61 ; Sesbania for 62 ; G.M. for 63. (c) N.A. for 60 ; Nil for others. (ii) Black soil. (iii) 17, 18.6.60 ; 29.6.61 and 1.7.61 ; 30.6.62 and 1.7.62 ; 20.7.63. (iv) Ploughings with country plough, working *gorru* and *guntaka*. (b) Hand dibbling. (c) 5 to 7 Kg/ha. (d) As per treatments. (e) 1 (v) 251·1 Q/ha. of F.Y.M. (vi) Green Long. (vi) Irrigated. (viii) Working of push cultivator thrice for 60, 2 *mummtai* diggings, 9 intercultivation with *patti guntaka* and 2 weedings for 61 ; 3 hand weedings and working of push cultivator thrice for 64, working *chitti* for 63, *guntaka* and hand weeding. (ix) 60 cm, 5 cm ; 24 cm ; 69 cm. (x) 1.9 60 to 12.10.60 ; 6.9·61 to 15.12.61 ; 18.8.62 to 12.10.62 ; 13.9.63 to 29.10.63.

2. TREATMENTS :

All combination of (1), (2), and (3).

(1) 3 spacings : S_1=61cm.×30 cm., S_2=46cm.×46 cm. and S_3=61cm.×61 cm.
(2) 3 levels of N as A/S : N_0=0, N_1 =22·4 and N_2=44·8 Kg/ha.
(3) 3 levels of P_2O_5 as Super : P_0=0, P_1=11·2 and P_2=22·4 Kg/ha.

A/S and Super were applied in one dose on. 21.7.60 for 60, on 31.8.61 for 61, on 6, 15.8.62 for 62. In 63 levels of P_2O_5 tried were P_0=0, P_1=22·4 and P_2=44·8 Kg/ha.

3. DESIGN :

(i) 3^3 Confd. (ii) (a) 9 plots/block ; 3 blocks/replication. (b) 49·4 m.×7·3 m. for 60, 61, 63 ; N.A. for 62. (iii) 2. (iv) (a) 7·3 m×5.5 m.(b) S_1=6·0 m.×4·9 m. S_2=6.4 m.×4·6 m, S_3=6 1 m×4·3 m (v) 61 cm.×30 cm., 46 cm.×46 cm., 61 cm.×61 cm., for S_1, S_2 and S_3 respectively.

4. GENERAL :

(i) Normal. (ii) Jassids and mite infestation observed for 60, 63 Controlled by spraying D.D.T. and dusting Sulphur. Cupravit was sprayed against Powdery Mildew ; Slight infestation of Jassids for 61. Controlled by spraying Endrin, Guesserol attack of Mites, Powdery Mildew and Fruit borer. Controlled dusting Sulphur; Jassids attack for 62 D.D.T. sprayed. Incidence of fruit borer and mosaic disease. (iii) Yield of Lady's finger. (iv) (a) 59-63 (levels of P_2O_5 changed in 63). (b) No. (c) Nil. (v) N.A. (vi) Nil for 60, 62 ; continuous rains for a period of 3 weeks in July and severe cold weather in Dec. 61 for 61. Rains were ill distributed in August and October for 63. (vii) Expt. No. 59 (116) has been taken into considration for pooling the results. Error variances are homogeneous and Treatments×years intraction is present.

5. RESULTS :

Pooled results for 59 to 62,
(i) 4688 Kg/ha. (ii) 1353·7 Kg/ha. (based on 54 d.f. made up of treatments × years interaction). (iii) Main effect of S alone is highly significant. (iv) Av. yield of Ladys' finger in Kg/ha.

2. TREATMENTS :

All combinations of (1), (2) and (3).

(1) 4 levels of N : N_0=0, N_1=112, N_2=224, N_3=336 Kg/ha.

(2) 2 levels of P_2O_5 : P_0=0, P_1=336 Kg/ha.

(3) 2 levels of K_2O : K_0=0, K_1=336 Kg/ha.

N Applied as A/S in two equal doses on 45th and 90th day after planting. P_2O_5 applied as Super at planting. K_2O applied as Potassium Chloride at planting.

3. DESIGN :

(i) Fact. in R.B.D. for 62, 63 and 4×2^2 confd. for 64 and 65. (ii) (a) 16 for 62, 63 ; 4 for 64 ; 8 for 65. (b) N.A. (iii) 3. (iv) (a) 12 m. × 9 m. for for 62 and 64 ; 12 m. × 10 m. for 63 and 65. (b) 10 m. × 4 m. for 62 and 64 ; 10 m. × 4 m. for 63 and 65. (v) 100 cm. × 250 cm. for 62 and 64 : 100 cm. × 300 cm' for 63 and 65. (vi) Yes.

4. GENERAL:

(i) Satisfactory. (ii) Early shoot borer attack for 62, 63, 64 Nil for 65. (iii) Yield of cane yield. (iv) (a) 1962—contd. (b) No. (c) Nil. (v) N.A. (vi) Nil for 62 ; continuous dry spell for 63 and 64 ; cyclonic effect for 65. (vii) Since the design is changed after 64, the results of 62 and 63 are only pooled together. Error variances are homogenous and Treatments × years interaction is present. Again since the experiment is continued beyond 1964 and 1965 the results of individual years for 64 and 65 are presecuted under 5. results.

Object :—To study the possibility of improving the cane yield without effecting the quality of early maturing variety Co—997 by applying 225 Kg/ha. of N as Ammo. Phos.

1. BASAL CONDITIONS:

(i) (a) Paddy—Sugarcane. (b) Paddy. (c) N.A. (ii) Clay loam. (iii) 9.2.65. (iv) (a) Trenching. (b) Trench planting. (c) 37066 three budded setts/ha. (d) 100 cm. between rows. (e) —. (v) As per treatments. (vi) Co—997. (vii) Unirrigated. (viii) Hoeing and weeding. (ix) N.A. (x) 19.12.65.

2. TREATMENTS :

6 manurial treatments : T_0=168 Kg/ha. of N as A/S in two equal doses at 30 and 60 days after planting (control), T_1=168 Kg/ha. of N as Ammo. Phos. in two equal doses at 30 and 60 days after planting, T_2=225 Kg/ha. of N as A/S in two equal doses at 30 and 120 days after planting, T_3=225 Kg/ha. of N in two equal doses 1st dose as Ammo. Phos. at 30th day and the 2nd as A/S at 120th day, T_4=225 Kg/ha. of N as Ammo. Phos. in two equal doses at 30 and 120 days after planting and T_5=111 Kg/ha. of N as A/S+111 Kg/ha. of P_2O_5 as Super at 30th day and 111 Kg/ha. of N as A/S at 120th day after planting.

3. DESIGN :

Object :— To study the response of Sugarcane to the three major plant nutrients applied singly or in different combinations.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) N.A. (ii) Clay loam. (iii) 2 and 3.2.60. (iv) (a) Forming trenches of 40 cm. width with 60 cm. spacing and loosening of the soil to 10 cm. depth. (b) Trench planting. (c) 37066 three budded setts/ha. (d) 100 cm. between rows. (e) —. (v) Nil. (vi) Co-419. (vii) Irrigated. (viii) Gap filling, hoeing once, weeding thrice, levelling once, earthing up once and trash twist propping twice. (ix) 181 cm. (x) 10.3.61.

2. TREAMENTS :

All combinations of (1), (2) and (3).

(1) 2 levels of N as A/S : N_0=0, N_1=168·1 Kg/ha.

(2) 2 levels of P_2O_5 as Super : P_0=0, P_1=112·1 Kg/ha.

(3) 2 levels of K_2O as Pot. Sul. : K_0=0, K_1=224·2 Kg/ha.

All fertilizers were applied by soil application in two equal doses at 45th and 90th day after planting.

3. DESIGN :

(i) (a) Paddy-Sugarcane for 62, Sugarcane-Paddy for 63, 64. (b) Sorghum for 62, Paddy for 63 and 64. (c) 44·8 Kg/ha. of N for 62 ; 67·2 Kg/ha. of N+44·8 Kg/ha. of P_2O_5 for 63, 64. (ii) Clay loam. (iii) 18·4, 18.5.62; 63 ; 64. (iv) (a) Trenching. (b) Trench planting. (c) 29653 three budded setts/ha. for 62, 63 ; 37066 three budded setts/ha. for 64. (d) 100 cm. × 30 cm. (e) —. (v) 251·1 Q/ha. of F.Y.M. applied 3 weeks prior to planting for 62. 247·0 Q/ha. of F.Y.M. applied 3 weeks prior to planting and hoed into trenches for 63 and 64. (iv) As per treatments. (vii) Irrigated. (viii) 1 to 5 weedings, hoeing, earthing up and trash twist propping. (ix) Nil for 62, 147 cm. for 63, 94 cm. for 64. (x) 17, 19.4.63; 2, 3.5.64 ; 26.4.65.

2. TREATMENTS :

All combinations of (1) and (2)

(1) 2 varieties: V_1=CO-997 and V_2=CO-419.

(2) 3 types of seed material : S_1=Planting of top setts in April at the time of topping for production of Rayungans, S_2=Planting top setts in May at the time of planting Rayungans and S_3=Planting of Rayungans in May.

3. DESIGN :

(i) R.B D. (ii) (a) 6. (b) 48 m. × 12 m. for 62 ; N.A. for 63; 48 m. × 12 m. for 64. (iii) 2. (iv) 12 m. × 8 m. for 62, 64 ; 72·84 sq. m. for 63. (b) 10 m. × 6 m. for 62, 64; 60·7 sq. m. for 63. (v) 100 cm. × 100 cm. for 62; N.A. for 63; 100 cm. × 100 cm. for 64. (vi) Yes.

4. GENERAL

(i) Satisfactory. (ii) Incidence of Early Shoot borer and stray incidence of Yellow Spot for 62 ; mild infestation of Early Shoot borer for 63 and 64. (iii) Yield of sugarcane. (iv) (a) 1962-64. (b) No. (c) As under 5. Results. (v) and (vi) Nil. (vii) Error variances are homogeneous and 'Treatments × years' interaction is present.

5. RESULTS

Pooled results

(i) 1025 Q/ha. (ii) 208·2 Q/ha. (based on 10 d.f. made up of 'Treatments × years' interaction). (iii) Main effect of V alone is significant. (iv) Av. yield of cane in Q/ha.

Object—To fix up manurial schedule for Cotton in Rice follows in the respective tracls.

1. BASAL CONDITIONS:

(i) (a) Paddy-Cotton. (b) Paddy. (c) N.A. (ii) Sandy loam. (iii) 20.2.64 and 1.3.65. (iv) (a) 2 to 3 ploughings with country plough. (b) Dibbling. (c) N.A. (d) 61 cm. × 30 cm. (e) 2. (v) Nil. (vi) P 216 F (medium). *(vii) Irrigated. (viii) 1-Mammuty* hoeing, 2 hand weedings, line weeding, earthing up and formation of ridges and furrows. (ix) 99 cm, 55 cm. (x) 10.6.64 to 22.8.64; 25.6.65 to 20.8.65.

2. TREATMENTS :

All combinations of (1), (2) and (3)

(1) 3 levels of N as A/S : N_0=0, N_1=44·8 and N_2=89·7 Kg/ha.

(2) 3 levels of P_2O_5 as Super : P_0=0, P_1=33·6 and P_2=67·2 Kg/ha.

(3) 3 levels of K_2O as Mur. Mot. : K_0=0, K_1=33·6 and K_2=67·2 Kg/ha.

N was applied in two equal doses, 1 and 2 months after sowing. P_2O_5 and K_2O were applied before sowing.

3. DESIGN :

(i) 3^3 confd. (ii) (a) 9 plots/block, 3 blocks/replication. (b) 54 m. × 24 m. (iii) 2. (iv) (a) 9·1 m. × 3·7 m. 6·1 m. × 6·1. (b) 8·5 m. × 2·4 m; 4·9 m. × 5·5 m. (v) 60 cm. × 30 cm. (vi) Yes.

Main-plot treatments :

2 levels of irrigations : I_1=30 cm. and I_2=45 cm. for each irrigation.

Sub-plot treatments :

3 frequencies of irrigation : F_1=8, F_2=10 and F_3=12 irrigations.

Sub-sub-plot treatments :

3 levels of N as A/S : N_0=0, N_1=56 and N_2=112 Kg/ha,

Instead of above in 65(157), the sub-plot treatments tried were :

3 frequencies of irrigation : F_1=6, F_2=8 and F_3=10 irrigations.

Object :—To study the efficacy of various spray schedules to get a fairly pest free crop under irrigated conditions.

1. BASAL CONDITIONS:

(i) (a) Sorghum—Cotton. (b) Sorghum. (c) 12 C.L./ha. of F.Y.M. (ii) Black cotton soils. (iii) 9.10.64 ; 13.8.65. (iv) (a) Working *gorru* thrice and *guntaka* twice. (b) Dibbling. (c) 10 Kg/ha. (d) 53 cm.×30 cm. (e) 1. (v) 12 C.L./ha. of F.Y.M.+22 Kg/ha. of N as A/S. (vi) *Laxmi*. (vii) Irrigated. (viii) 2-3 interculturings and 1 hand weeding. (ix) N.A. (x) 20.3.65 to 17.4.65 ; 8.2.66 to 11.3.66.

2. TREATMENTS:

6 Insecticidal treatments : T_0=Control (no spray), T_1=Endrin alternated with 0·1% D.D.T.+0·1% B.H.C., T_2=0·15% Carbaryl alternated with 0·05% Methyl Parathion, T_3=0·15% Carbaryl alternated with 0·03% Phosphamedor, T_4=0·02% Methyl Parathion +0·02% Endrin and T_5=0·15% Carbaryl.

Dates of sprayings : 28.11.64, 13.12.64, 28.12.64, 12.1.65, 11.2.65 and 26.2.65 for 64(265) ; 30.10.65, 14.11.65, 25.11.65, 14.12.65, 29.12.65 and 13.1.66 for 65(175).

2. TREATMENTS :

Main-plot treatments :

4 organic manures : M_0=Control (no manure), M_1=125 Q/ha. of C.M., M_2=125 Q/ha. of G.L. compost and M_3=173 Kg/ha. of Castor cake.

Sub-plot treatments :

All combinations of (1) and (2)

(1) 3 levels of N as A/S : N_0=0, N_1=16·8 and N_1=33·6 Kg/ha.

(2) 3 levels of P_2O_5 as Super+K_2O as Pot. Sul : F_0=0, F_1=33·6 Kg./ha. of P_2O_5+33·6 Kg/ha. of K_2O and F_2=50·4 Kg/ha. of P_2O_5+50·4 Kg/ha. of K_2O.

Object :— To find out the optimum spacing and dates of sowing for Groundnut crop.

1. BASAL CONDITIONS:

(i) (a) Fallow-Groundnut-Fallow-Gingelly. (b) Fallow. (c) Nil. (ii) Sandy loam. (iii) As per treatments. (iv) (a) 4 to 5 ploughings with country Plough. (b) Hand dibbling. (c) 90, 67, 50 and 40 Kg/ha. for S_1, S_2, S_3 and S_4 spacings respectively. (d) As per treatments. (e) 1. (v) N.A. for 63 ; 24·7 C.L./ha. of F.Y.M. for 64. (vi) FMV-3. (vii) Unirrigated. (viii) 2 hand weedings and hoeing. (ix) 102·2 cm. ; 85·9 cm. (x) 31.10.63 ; 10, 16, 23.11.63 and 14.12.63 for 63 ; 28.10.64, 13, 14.11.64 for 64.

2. TREATMENTS :

Main-plot treatments:

5 dates of sowing : D_1=1st week of June, D_2=2nd week of June, D_3=Third week of June, D_4=1st week of July and D_5=Secod week of July.

Sub-plot treatments :

4 spacings: S_1=23 cm.×23 cm., S_2=30 cm.×23 cm., S_3=30 cm.×30 cm. and S_4=38 cm.×30 cm.

3. DESIGN :

(i) Split-plot. (ii) (a) 5 main-plots/replication ; 4 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) 9·8 m.×5·5 m. (b) 9·1 m.×4·6 m. (v) 30 cm.×46 cm. (vi) Yes.

4. GENERAL :

(i) Normal. (ii) Mild incidence of Tikka leaf spot disease noticed and B.H.C. was dusted. (iii) Yield of pods. (iv) (a) 1963-65. (b) No. (c) Nil. (v) N.A. (vi) Nil. (vii) Expt. of 1965 was rejected because of poor yields, error variances of Sub-plot are heterogeneous.

5. RESULTS :

Crop :- Groundnut. **Ref :- A.P. 65(232).**

Site :- Oilseeds Res. Stn., Yellamanchili. **Type :- 'CM'.**

Object :—To determine optimum spacing between and within rows and their relationship with fertilizer application.

1. BASAL CONDITIONS :

(i) (a) Groundnut—Fallow—Groundnut—Fallow. (b) Fallow. (c) Nil. (ii) Sandy loam. (iii) 16, 17.7.65/gap filling 25.7.65. (iv) (a) Ploughing with country plough. (b) Hand dibbling. (c) 124 Kg/ha. (d) 20 cm.×20 cm. (e) 1. (v) Nil. (vi) TMV-3 (spreading, 120 days duration). (vii) Unirrigated. (viii) Hand weeding and hoeing 2 times. (ix) N.A. (x) 30.11.65.

2. TREATMENTS :

All combinations (1), (2) and (3)

(1) 3 spacings between rows : R_1=30, R_2=38 and R_3=46 cm.

(2) 3 spacings within rows : S_1=8, S_2=15 and S_3=23 cm.

(3) 3 fertilizers : F_0=Control (No manure), F_1=11 Kg/ha. of N as A/S+17 Kg/ha. of P_2O_5 as Snper +17 Kg/ha. of K_2O of as Mur. Pot. F_2=22 Kg/ha. of N as A/S+34 Kg/ha. of P_2O_5 as Super+34 Kg/ha. of K_2O as Mur. Pot.

Fertilizers were applied by placement in furrows before sowing on 16, 17.7.65.

3. DESIGN :

(i) 3^3 confd. (ii) (a) 9 plots/block ; 3 blocks/replication. (b) N.A. (iii) 2. (iv) (a) 9·8 m.×5·2 m. (b) 9·1 m.×4·6 m. (v) 30 cm.×30 cm. (vi) Yes.

Oject : —To determine the optimum irrigational practices and its relation with the method of fertilizer placement.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) Red sandy loam. (iii) 26, 28.7.65. (iv) (a) Ploughing with country plough. (b) Hand dibbling. (c) 124 Kg/ha. (d) 20 cm.×20 cm. (e) 1. (v) Nil (iv) TMV—2. (vii) Irrigated. (viii) Working *danthula* and hand weeding twice. (ix) N.A. (x) 20.11.65.

2. TREATMENTS :

Main-plot treatments :

All combinations of (1) and (2)

(1) 3 irrigational times : I_1=At sowing, I_2=At flowering and I_3=At fruiting.

(2) 2 Fertilizer levels : F_1=15 Kg/ha. of N as A/S+30 Kg/ha. of P_2O_5 as Super+30 Kg/ha. of K_2O as Mur. Pot., F_2=60 Kg/ha. of N as A/S+60 Kg/ha. of P_2O_5 as Super+60 Kg/ha. of K_2O as Mur. Pot.

Sub-plot treatments:

4 methods of application of fertilizers: M_0=No application, M_1=Below the seed in furrows, M_2=Band placement, M_3=Local method (broadcasting).

Manure applied on 24.8.65.

3. DESIGN

1. BASAL CONDITIONS :

(i) (a) Chillies-Chillies (b) Chillies. (c) 67·2 Kg/ha. of N as A/S, 33·6 Kg/ha. of P_2O_5 as Super and 56·0 Kg/ha. of K_2O as Mur. Pot. (ii) Deep black retentive clay loam. (iii) 1.10.63. (iv) (a) Field was ploughed 4 times with country plough, harrow was worked twice for levelling the field and finally rows were formed. (b) Broadcasting. (c) N.A. (d) 55·9 cm. × 14·0 cm. (e) 1. (v) 12·3 C.L./ha. F.Y.M., 67·2 Kg/ha. of N as A/S, 33·6 Kg/ha. of P_2O_5 as Super and 56·0 Kg/ha. of K_2O as Mur. Pot. (vi)G-3 (medium). (vii) Unirrigated. (viii) Weeding twice, Junior hoe worked twice, final intercultivation.by working country plough in rows. (ix) 72·3 cm. (x) 25.1.64 and 22.2.64.

2. TREATMENTS :

4 levels of girth measurement of seedlings : T_1=1·5, T_2=2·0, T_3=2·5 and T_4=3·0 mm. diameter.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) 8·9 m. × 3·3 m. (iii) 6. (iv) (a) 3·3 m. × 2·2 m. (b) 2·2 m. × 1·8 m. (v) 55 cm. × 20 cm (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Thrips incidence was noticed and was brought to check by spraying 0·4% B.H.C. (iii) Population counts and yield of chillies. (iv) (a) 1963-65 (modified) in 64). (b) No. (c) Nil. (v) N.A. (vi) During October 63, a heavy down pour of 30·6 cm. on 6 rainy days which affected the chilli crop under initial stages of growth. (vii) Nil,

5. RESULTS :

(iv) 1779 Kg/ha. (ii) 448·9 Kg/ha. (iii) Treatment differences are not significant. (iv) Av. yield of chillies in Kg/ha.

Object: — To ascertain the comparative merits of planting different types of seed material.

1. BASAL CONDITIONS :

(i) (a) Paddy—Turmeric for 60 ; Paddy+Red gram-Turmeric for 61. (b) Paddy for 60. ; Paddy+Red gram for other. (c) 143·5 Kg/ha. of A/S in two doses for 60 ; 193·9 Kg/ha. of A/S for 61. (ii) Stiff clayey soil (iii) 30, 31.7.60 ; 13, 14.7.61. (iv) (a) 2 ploughings for 60 ; 6 ploughings for others. (b) Hand dibbling. (c) 31·4 Q/ha. for 60 ; 22·0 Q/ha. for 61. (d) As per treatments. (e) 1. (v) 62·8 Q/ha. of F.Y.M. and compost+67·2 Kg/ha. of P_2O_5 as Super for 60 ; 125·6 Q/ha. of F.Y.M. and compost+67·5 Kg/ha. of P_2O_5 as Super for 61. (vi) Duggirala local (late). (vii) Irrigated. (viii) 12 hand weedings+1 to 2 intercultivations. (ix) 75 cm. ; 111 cm. (x) 27 to 31.3.61 ; 10 to 12.3.62.

2. TREATMENTS :

Main-plot treatments :

2 methods of planting : M_1=Planting on broad ridges 1·2 m. wide with row spacing 31 cm. and M_2=Planting in ridges and furrows with row spacing 51 cm.

Sub-plot treatments :

6 seed type cum plant spacing treatments : T_1=Whole mothers planted 31 cm. deep apart, T_2=Whole mothers 20 cm. apart, T_3=Cut half of mothers 20 cm. apart, T_4=Cut halves of mothers 10 cm. apart, T_5=Primary fingers 20 cm. apart and T_6=Primary fingers 10 cm. apart.

3. DESIGN :

(i) Split-plot. (ii) (a) 2 main-plots/replication ; 6 sub-plots/main-plot. (b) 38·4 m.×13·5 m. for 60 ; 28·8 m. ×18·0 m for 61. (iii) 4. (iv) (a) 44·5 sq. m. (b) 27·9 sq. m. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Heavy incidence of leaf spot disease which was not controllable for 60, foliar spraying with 10% Brodeaux mixture twice, incidence of leaf spot and early Wilt for 61, foliar spray was done thrice with 1% Bordeaux mixture. (iii) Yield of green rhizomes. (iv) (a) 1958-61. (b) No. (c) Nil. (v) N.A (vi) Nil. (vii) Expts. 58, 59 have also been included. Sub-plot error variances are heterogeneous therefore results of individual years are presented below.

5. RESULTS :

60(35)

(i) 197·2 Q/ha. (ii) (a) 48·2 Q/ha. (b) 50·2 Q/ha. (iii) Main effect of T alone is significant. (iv) Av. yield of greeen rhizomes in Kg/ha.

Crop :- Mixed Cropping with Groundnut (*Kharif*). **Ref :- 60(23), 61(19), 62(22), 63(19).**

Site :- Reginal Oil seeds Res. Stn., Kadiri. **Type :- 'X'.**

Object : —To find out the suitable economic crop to be grown with spreading variety of Groundnut and compare the economics with pure Groundnut crop.

1. BASAL CONDITIONS :

(i) (a) Nil for 60, 61, 62 ; Grounddnut—Castor for 63. (b) Groundnut for 60 ; Castor for others. (c) N.A. for 60, 61, 62 ; 7532 Kg/ha. of F.Y.M.+22·4 Kg/ha. of A/S+9·5 Kg/ha. of Super+7·8 Kg/ha. of Pot. Sul. for 63. (ii) Red loam. (iii) 9.9.60 ; 23,24.6.61 ; 2, 3.8.62 ; 18.7.63. (iv) (a) Working country plough once followed by *Chekkala guntaka* twice. (b) and (c) N.A. (d) 23 cm. between rows. (e) N.A.
