# State: **HARYANA**

# **Agriculture Contingency Plan District: BHIWANI**

1.0 Γ	District Agriculture profile					
1.1	Agro-Climatic/Ecological Zone					
	Agro Ecological Sub Region (ICAR)	Western plain hot arid eco-system with desert soils (2.3)				
	Agro-Climatic Region (Planning Commission)	Trans Gangetic Plain region (VI)				
	Agro Climatic Zone (NARP)*	Western Agrocli	matic Zone of I	Haryana (HR-2)		
	List all the districts falling under the NARP Zone	Sirsa, Fatehabad,	Hisar, Bhiwani	, Mahendragarh, Rewari		
	Geographical coordinates of district	Latitude		Longitude	Altitude	
		28° 46' 57.85" N		76° 08' 03.68" E	237 m	
	Name and Address of the concerned ZRS/ZARS/RARS/RRTTS	Directorate of Research, CCS HAU, Hissar-125 004				
	Mention the KVK located in the district	Krishi Vigyan Kendra, Near Bhim Stadium, Bhiwani -127 021				
1.2	Rainfall	Average (mm)	Normal Onse	t Normal Cessation	on	
	SW monsoon (June-Sep):	340.0	1st week of Ju	aly 3 <sup>rd</sup> week of Sept	ember	
	NE Monsoon(Oct-Dec):	15.7	-		-	
	Winter (Jan- March)	36.7				
	Summer (Apr-May)	18.4				
	Annual:	410.8				

<sup>\*</sup> If a district falls in two NARP zone, mention the zone in which more than 50% area falls.

1.3	Land use pattern	Total	Forest	Land under	Permanent	Cultivabl	Land under Misc.	Barren and	Current	Other

Wheat: Yellow and brown rust of wheat become severe Karnal bunt infection increases under moist conditions Bajra: Downy mildew incidence increases	Spray 600 – 800 gm Mancozeb 200 lt. of water/acre at the appearance of disease and repeat after 15-20 days  There is no control measure except resistant varieties			Treat wheat seed with Raxil 2DS @ 1 gm/kg before sowing to control Karnal bunt
Indian Mustard: White rust and Alternaria leaf blight increase, stem rot increases due to rain and cold weather	Spray Mancozeb 0.2% 3-4 times at an interval of 15 days to control white rust and Alternaria leaf blight.	To control stem rot spray 0.2% Carbendazim.		
Cotton: Bacterial leaf blight increases due to rainfall from traces to moderate intensity whereas cotton leaf curl virus decreases	Soak 5 -6 kg delimited and limited cotton seed in 10 lt. of water suspension containing 5 g Emisan + 1 gm Streptocycline sulphate for 2 hrs. and 6-8 hrs respectively before sowing			
Horticulture				
<b>Potato:</b> Early blight of potato increases with rainfall	Spray Mancozeb @ 0.25% 4-5 times at an interval of 15 days	-

# 2.5 Contingent strategies for Livestock, Poultry & Fisheries

## 2.5.1 Livestock

		Suggested contingency measures	
	Before the event	During the event	After the event
Drought			
Feed and fodder availability	<ol> <li>All Districts should be asked to locate their feed and fodder banks in view of submergence situation arising due to draught. Sufficient care must be taken to sensitize the farmers to protect their feed and fodder much ahead of onset of monsoon. The sources for procurement of feed / rice bran (Kunda) within the district and nearest locations should be identified, and the suppliers kept informed about the emergency situation, which might require action at their level for production and supply to the identified areas within the shortest possible time.</li> <li>Complete feed blocks should be prepared and stored in the feed banks for scarcity periods.</li> <li>The livestock holders of small ruminants should be educated/ informed to collect sufficient amount of green leaves from edible plants for use during the period of submergence at the earliest, after receipt of draught warning. The district authorities of Animal Husbandry Department should chalk out a complete programme to cater the feed &amp; fodder needs of livestock.</li> <li>Increase the sown area under fodder crops</li> <li>Looking to scarcity of crop residues, burning of paddy straw and stubbles should not be allowed in Haryana. This can be properly harvested, baled, densified and fortified using 4% urea with molasses and transported to areas of fodder scarcity. Standardized machinery for harvesting, bailing, densification and fortification is available with</li> </ol>	<ol> <li>The best option is to open fodder depots for milch animals which farmers will never deposit into the cattle camps and establish cattle camps for dry and scrub animals. These camps should be established along assured source of water or canals for drinking and growing fodder.</li> <li>Facilities like storing densified roughages transported from other districts should also be established adjacent to these camps.</li> <li>Complete feed blocks stored in the feed banks should be provided to productive, lactating and pregnant animals for scarcity periods</li> <li>Since stall feeding adversely affects the breeding efficiency in case of sheep, therefore, sheep should always be resorted to natural grazing.</li> <li>Special care is required for productive, lactating and pregnant animals. These animals must be supplemented with additional concentrates and fodders.</li> <li>Most of such animals will be retained by the farmers and arrangements for fodder, feed and drinking water should be made accordingly.</li> </ol>	Immediate efforts are needed to grow short duration fodder crops like oats, barley, kasni and lucern etc. in the canal command areas.     Farmers might have to be compensated for abandoning food or commercial cash crop to meet contingent fodder requirements.

		Suggested contingency measures	
	Before the event	During the event	After the event
	Punjab Agro Federation and in the market.		
Drinking water	Prior to the onset of summer all the water ponds/lakes in the villages/cities should be filled up with canal water/tube wells.	<ol> <li>All the affected livestock should have an access to clean drinking water. Arrangements are required to be made in this regard with the help of concerned Government functionaries of the Districts.</li> <li>Resorting to alternate day watering to camel, sheep and goats. Experimental evidences show that even watering twice a week did not have much adverse effect on body weight of the sheep.</li> <li>Avoiding long distance grazing, as tired animals need more and frequent watering and feeding.</li> </ol>	Normal supply of water should be restored.
Health and disease management	Constitution of task force at district and sub division level which will formulate guidelines for action should have a mobile veterinary unit at their disposal. Procurement of mineral and feed supplements, life saving drugs, electrolytes, vaccines etc.	Disbursement of supplements, treatment of affected animals in camps, proper disposal of dead animals, deworming and vaccinations.	Rehabilitation of affected animals, provision of veterinary aid and follow up, provide supplements etc to make up losses for deficiencies.
Floods			
Feed and fodder availability	1. All Districts should be asked to locate their feed and fodder banks in view of submergence situation arising due to floods. Sufficient care must be taken to sensitize the farmers to protect their feed and fodder much ahead of onset of monsoon. The sources for procurement of feed / rice bran (Kunda) within the district and nearest locations should be identified, and the suppliers kept informed about the emergency situation, which might require action at their level for production and supply to the identified areas within the shortest possible time.  2. Complete feed blocks should be prepared and stored in the feed banks for scarcity periods  3. The livestock holders of small ruminants should be educated/ informed to collect sufficient amount of green leaves from edible plants for use during the period of submergence at the earliest, after receipt	<ol> <li>The best option is to open fodder depots for milch animals which farmers will never deposit into the cattle camps and establish cattle camps for dry and scrub animals. These camps should be established along assured source of water or canals for drinking and growing fodder.</li> <li>Facilities like storing densified roughages transported from other parts of the country should also be established adjacent to these camps.</li> <li>Immediate efforts are needed to grow fodder crops like oats, barley, kasni and lucern etc. in the canal command areas.</li> <li>Farmers might have to be compensated for abandoning food or commercial cash crops to meet contingent fodder requirements.</li> <li>Since stall feeding adversely affects the breeding efficiency in case of sheep, therefore, sheep should</li> </ol>	<ol> <li>Immediate efforts are needed to grow fodder crops like oats, barley, kasni and lucern etc. in the canal command areas.</li> <li>Farmers might have to be compensated for abandoning food or commercial cash crops to meet contingent fodder requirements.</li> <li>After the sheds have dried, these should be disinfected and regular feed of the animals should be introduced gradually.</li> </ol>

		Suggested contingency measures	
	Before the event	During the event	After the event
	of draught warning. The district authorities of Animal Husbandry Department chalk out a complete programme to cater the feed & fodder needs of cattle, buffalo, sheep, goat, pig, dog, poultry birds etc.  4. The livestock holders of livestockare trained regarding shifting of animals before flooding. The farmers are instructed to let loose their animals instead of tieing much before flood.  5. Increase the sown area under fodder crops  6. Looking to scarcity of crop residues, burning of paddy straw and stubbles should not be allowed in Haryana. This can be properly harvested, bailed, densified and fortified using 4% urea with molasses and transported to areas of fodder scarcity. Standardized machinery for harvesting, bailing, densification and fortification is available with Punjab Agro Federation and in the market.	always be resorted to natural grazing.  6. Special care is required for productive, lactating and pregnant animals. These animals must be supplemented with additional concentrates and fodders.  7. Most of such animals will be retained by the farmers and arrangements for fodder, feed and drinking water should be made accordingly.	
Drinking water	Tube wells should be installed before monsoon to provide underground water to the livestock during flood period.	All the affected livestock and poultry should have an access to clean drinking water. Arrangements are required to be made in this regard with the help of concerned Government functionaries of the Districts. The available water may be chlorinated if required with help of Halogen Tablet prior to drinking by livestock and poultry.	Normal supply of water should be restored.
Health and disease management	Constitution of task force at district and sub division level which will formulate guidelines for action. Procurement of mineral and feed supplements, life saving drugs, electrolytes, vaccines etc. Workout places for evacuation.	Evacuate to safe places, provide veterinary aid to affected animals, proper disposal of dead animals, disainfection of drinking water. If not already done, carry out deworming and vaccinations for HS, FMD, BQ in cattle, PPR, sheep pox, ET in sheep and goats, swine fever in pigs	Rehabilitation of affected animals, provision of veterinary aid and follow up, provide supplements etc. Disinfection of area, control of vectors, prevention of spread of disease/outbreaks. Treatment of affected animals.

Electric fans should be provided in the sheds and if possible desert cooler should be provided during heat period.</li> <li>High energy and readily available sources of energy nutrients may be provided in the ration.</li> </ol>	Normal shelter should be restored
Health and disease management	Provision of shelter/roof/covered and open area to animals, procurement of life saving drugs and vaccines.	Cold waves: Cover the animal with old blanket/gunny bag etc. Heat wave: Sprinkle water/take buffaloes to ponds. Treat affected animals, vaccinate if not done earlier.	Treatment of affected animals, provide veterinary aid and follow up.

# **2.5.2 Poultry**

	Suggested contin	Suggested contingency measures			
	Before the event	During the event	After the event		
Drought					
Shortage of feed ingredients	I. All Districts should be asked to locate their feed banks in view of submergence situation arising due to draught. Sufficient care must be taken to sensitize the farmers to protect their feed and fodder much ahead of onset of monsoon. The sources for procurement of feed / rice bran (Kunda) within the district and nearest locations should be identified, and the suppliers kept informed about the emergency situation, which might require action at their level for production and supply to the identified areas within the shortest possible time. I. The district authorities of Animal Husbandry Department should chalk out a complete programme to cater to feed the poultry birds.	Poultry farmers should be provided with sufficient amount of feed ingredients and complete feed during draught situation from the feed banks.	Normal feeding should be restored		
Drinking water	Necessary arrangement for water storage should be made. Hand pumps should be installed around the sheds. Sufficient quantity of electrolytes	All the affected poultry should have an access to clean drinking water. Arrangements are	Normal drinking water restored		

	should be ensured.	required to be made in this regard with the help of concerned Government functionaries of the Districts.	
Health and disease management	Constitution of task force at district and sub division level which will formulate guidelines for action should have a mobile veterinary unit at their disposal. Commercial poultry farms can procure grain/feed in advance.	In backyard birds, put some grains and sufficient water inside the enclosure, provide some vitamin supplement.	In backyard poultry, carry out de-worming and vaccination for Ranikhet disease and Gumboro. Provide vitamins and mineral supplement.
Floods			
Shortage of feed ingredients	I. All Districts should be asked to locate their feed banks in view of submergence situation arising due to flood. Sufficient care must be taken to sensitize the farmers to protect their feed much ahead of onset of monsoon. The sources for procurement of feed / rice bran (Kunda) within the district and nearest locations should be identified, and the suppliers kept informed about the emergency situation, which might require action at their level for production and supply to the identified areas within the shortest possible time.  II. The poultry farmers should be trained regarding shifting of birds before flood. For shifting of poultry birds to safer places, the farmer should be educated to make suitable cages from bamboos.	Sufficient quantity of feeds stored in the feed banks should be made available to the poultry farmers.	Normal feeding should be restored
Drinking water	I. Prior to the onset of monsoon tube wells should be installed in the villages and near to the poultry farms so as to provide underground water during flood.	All the affected poultry should have an access to clean drinking water. Arrangements are required to be made in this regard with the help of concerned Government functionaries of the Districts. The available water may be chlorinated if required with help of Halogen Tablet prior to drinking by livestock and poultry.	Normal drinking water restored
Health and disease management	Constitution of task force at district and sub division level which will formulate guidelines for action should have a mobile veterinary unit at their disposal. Make provision of shelter for evacuation and arrangement around farm so that flood water does not enter poultry farm/shed. Provision or facilities for disposal of dead birds.	Evacuate the birds to safer places. Carry out deworming and vaccinations. May dispose off/sell birds for meat purpose. Proper disposal of dead birds.	Make shed dry, sprinkle lime & spray insecticides, disinfectant before placement of birds,

Cyclone Shortage of feed	-NA-		use of coccidiostat in feed or water, proper disposal of dead birds.
ingredients			
Drinking water			
Health and disease management	Keep arrangements in place in shed for heating during winter/cold waves and for cooling by use of sprinklers/foggers. Procure electrolytes and supplements.	Avoid too much fluctuation below the temperature of 70 °F and above 100 °F. Use bukharies, gas burner, secure curtains during winter. Provide a course of antibiotics in feed or water for 3-5 days to combat respiratory problems. Provide vitamin C, electrolyte in drinking water during heat waves and use of foggers, wetting of curtains, sprinkling of water etc. during heat waves. May dispose off/sell birds if heavy mortality occurring.	Treatment of affected birds, vaccination if delayed may be carried out as per schedule.
Heat wave and cold wave			
Shelter/environment management	· ·	Window of sheds should be covered with gunny bags, tatties, & tirpal. Electric fans should be provided in the sheds and if possible desert cooler should be provided during heat period. High energy & readily available sources of energy nutrients may be provided in ration.	Normal shelter should be restored
Health and disease management			

## 2.5.3 Fisheries

	Suggested contingency measures		
	Before the event	During the event	After the event
1) Drought			
A. Capture	NA		

Marine			
Inland			
(i) Shallow water depth due to insufficient rains/inflow			
(ii) Changes in water quality			
B. Aquaculture			
(i) Shallow water in ponds due to insufficient rains/inflow	Further increase the depth of ponds, store the fish stock in 1 & 2 ponds only.	Sell the big fishes and keep the smaller fishes in one tank.	Stock the young fishes in different tanks, species wise.
(ii) Impact of salt load build up in ponds / change in water quality	Continuously add some water from tube well/water source in fish ponds	Do not allow the water level to go below 3.5 feet in fish ponds.	Stock the young fishes in different tanks and keep the water between 3.5 and 6.0 feet.
2) Floods	NA		
A. Capture			
Marine			
Inland			
(i) No. of boats / nets/damaged			
(ii) No.of houses damaged			
(iii) Loss of stock			
(iv) Changes in water quality			
(v) Health and diseases			
B. Aquaculture			
(i) Inundation with flood water	Boundaries/bunds with height >6 feet may be made around fish ponds, will restrict, escape of fishes from ponds	Net-out and stock the fishes in one big tanks and make the bund >6 feet height around the ponds.	Remove the bund separately and release the fishes, species-wise in tanks.
(ii) Water contamination and changes in water quality	Add more fresh water in each tank (tube well/canal), grow aquatic weeds.	Repeatedly filter and re-circulate water from stocking tanks	Filter, re-circulate and add new fresh water every week, will decrease fish mortality.

(iii) Health and diseases	Treat the pond water with KmNO <sub>4</sub> @ 10 ppm in each fish tanks. Add new fresh water periodically.	Disinfect fish ponds with KmNO <sub>4</sub> @ 10g/10,000 liter water fortnightly.	Treatment with KmNO <sub>4</sub> must continue for one month even after flood situation is out. Remove the highly infected fishes from ponds.
(iv) Loss of stock and inputs (feed, chemicals etc)	Store the inputs at safer places.	Move stock and inputs to safer places and acquire fresh stock in shortage.	Retain the normal arrangements.
(v) Infrastructure damage (pumps, aerators, huts etc)	Make alternate arrangements according to the anticipated conditions	Proper maintenance/repairing of damaged infrastructure or make new arrangements.	Proper maintenance/repairing of damaged infrastructure.
3. Cyclone / Tsunami	NA		
A. Capture			
Marine			
(i) Average compensation paid due to loss of fishermen lives			
(ii) Avg. no. of boats / nets/damaged			
(iii) Avg. no. of houses damaged			
Inland			
B. Aquaculture			
(i) Overflow / flooding of ponds			
(ii) Changes in water quality (fresh water / brackish water ratio)			
(iii) Health and diseases			
(iv) Loss of stock and inputs (feed, chemicals etc)			
(v) Infrastructure damage (pumps, aerators, shelters/huts etc)			
4. Heat wave and cold wave			

A. Capture	NA		
Marine			
Inland			
<b>B</b> . Aquaculture			
(i) Changes in pond environment (water quality)	Keep the ponds water fresh by adding fresh tubewell water, regularly.	Showering the water in air and add fresh tube-well water, periodically.	During heat waves, showering is must and also tubewell water. In winter continue adding of tubewell water with KMnO <sub>4</sub> .
(ii) Health and Disease management	Treatment of KmNO4 @ 10 ppm. Sale out the bigger fishes.	Treatment of KMnO4 @ 10 ppm. Dump the fishes which were heavily infected	Disinfection with KmNO <sub>4</sub> continues. Sale out all the fishes except, infected ones. Dump the infected fishes in a ditch in the ground.
