

2. Das, D.C., Raghunath, B., Chandrasekhar, K. and Thomas, P.K. 1977. Drought analysis from incident rainfall and excess deficit rainfall at Ootacamund (India). *J. Soil and Water Conserv. India*, 27(1&4):21-32.

Drought analysis pertaining to Ootacamund (Nilgiris) was done from annual rainfall limits as well as excess deficits. A drought year can be expected once in every 6 years and a serious drought year once in every 25 years. The protection to agricultural crop through agronomic techniques and water resource development is suggested.
