

166. **Bhushan, L.S. and Ghosh, Sandip. 1980.** Effect of tillage and duration of mulching on grain yield of maize and wheat. Abstract No. 56, National Symp. on "Soil Conservation and Water Management in 1980's", Dehradun, March 12-13, 1980: 40.

The study conducted at Dehradun suggests that in cropping system of maize-wheat, deep ploughing should be given to maize and surface mulching should be applied at the fag end of monsoon i.e. first week of September which helps in obtaining higher yields of maize and wheat from rainfed lands.
