

Shashan, L.S., Singh, Gurmel and Anderson, D.T. 1977. Efficacy of deep tillage on moisture conservation and yield of rainfed crops. *Soil Conserv. Digest*, 5(1): 8-14.

An experiment to determine the effect of tillage by various implements on the performance of maize crop and conservation of incident rainfall in Doon Valley for toria crop indicated that the initial cost involved in land preparation by mould board plough was higher than country plough. However, there was little difference in cost of production of maize crop.
