

205. Dayal, R., Singh, Gurmel and Sharma, R.C. 1967. Growing of legume and cereal mixture under dry farming conditions. *Indian J. Agron.*, 12(2):126-131.

Cereal-legume intercropping of wheat+gram gave significantly higher monetary returns as compared to those crops grown individually. Intercrops performed better than single crops even under unfavourable conditions of drought. Soil became richer in nitrogen due to incorporation of legume in the intercropping systems.
