

224 **Gidwani, H.M., Agarwal, M.C. and Dubey, L.N. 1967.** Crop rotation for reclaimed ravine lands. *J. Soil & Water Conserv. India*, 15(1&2): 55-60.

In a trial on five crop rotations in reclaimed ravine areas, *bajra+arhar*-mustard was proved best rotation in which increase in *bajra* grain and fodder yield doubled that of *bajra* continuous rotation. *Bajra*-cowpea was the next best rotation. All the rotations tried improved the soil fertility but *bajra+arhar*-mustard followed by *bajra*-cowpea proved best for this purpose.
