

**Gupta, R.K., Shukla, D. and Nambiar, K.T.N. 1980.** Evaluation of turmeric varieties for Doon Valley. Abst. 45, National Symp. on "Soil Conservation and Water Management in 1980's", Dehradun, March 12-13, 1980: 33.

*Six* varieties of turmeric and one local were evaluated at Dehradun in a replicated,

randomised block design since 1974. The differences in yields were found to be statistically significant during the cropping seasons 1974-75 and 1977-78. The varieties No.24 (12180 kg/ha), C.A. 68 Dahgi (11725 kg/ha), C.L.L.-323 Avanigadda (10550 kg/ha) and C.A. 68 G.L. Puram gave significantly better yields over the local control (8061 kg/ha). The varieties No. 24 and C.A. 68 Dahgi are recommended to be popularised for Doon Valley. It is further recommended that these varieties namely No. 24 and C.A. 68 Dahgi are promising also as intercrop in Doon (var. Florida Sun) orchards.
