

256. Juyal, G.P. 1981. Water mill in the hills. *Indian Farmers' Digest*, XIV(12): 26-27.

Describes mechanism of functioning of water mills with the help of running water in the

streams/rivers in the hilly areas. The water mills work on the same principles on which a modern turbine runs. It does not involve any operational cost with regard to fuel. The device is particularly suitable for the hilly areas where streams and rivers are found in abundance.
