

407. **Rama Mohan Rao, M.S. 1981.** Black soil is not really black. *Farmer's Journ.*, 1(7): 5-7.

The author emphasises that with scientific management of land and water resources and by adoption of suitable soil and moisture conservation techniques alongwith improved agronomic practices, crop yields can be increased appreciably in rainfed black soils which are basically poor in organic matter, nitrogen and phosphorus content.
