

527. Srivastva, A.K. 1985. Some aspects of weed management. *Indian J. Soil Conserv.*, 13(2&3): 56-62.

The paper brings out that adoption of simple conservation measures, like contour farming could be of great help. It is suggested that a) mechanical or manual weed control in levelled land; b) chemical weed control without soil disturbance, alongwith contour cultivation and suitable crop management on moderate slopes to better compete with weeds and c) quick growing smothering crop on sloping lands, use of herbicides and avoiding mechanical control or alternate land use may be a good approach of weed management.
