

743. **Puri, D.N. and Vishwanatham, M.K. 1986.** Constraint analysis and rehabilitation measures for degraded lands. National Seminar on "Wasteland, its development and utilization", CAZRI, Jodhpur, Dec. 11-13, 1986. In: Wasteland Development and their utilization, Scientific Publishers, Jodhpur (1988): 469-479.

The paper briefly introduces the readers with the problem of land degradation in India and then presents a detailed account of various constraints and adverse factors which come across while implementing the plantation and reclamation programmes in order to make such lands productive and useful. It also provides information, mainly based on research work carried out at CSWCRTI's Selakui Farm in riverbed bouldery lands, on methods and techniques to make barren degraded lands green and productive. Soil working techniques with regard to *Eucalyptus* hybrid, *E.camaldulensis*, *E.citriodora*, *Grewia optiva* and *Leucaena leucocephala* have been highlighted.
