

weight) of grass/acre after 3-4 years of simple closure.

907.      Khybri, M.L. 1974. Ravine reclamation in Kota. *Soil Conserv. Digest*, 2(1): 57-60.

The paper discusses occurrence and extension of ravines along rivers in Rajasthan region and techniques like closure, construction of marginal bunds, safe disposal of runoff and

stabilisation of eroding faces and beds of the ravines by permanent vegetation of grass and trees to check the extension of ravines have been described. Reclamation of shallow ravines for agriculture and utilization of medium and deep ravines for fuel and fodder species has also been dealt with.
