

- 1002.** Singh, A. and Dayal, R. 1975. Development of water resources in ravine utilization-a case study. *Soil Conserv. Digest*, 3(1): 26-30.

Discusses water resource development in the ravines. It is re-vealed that the rain water retained in treated catchment was about 53% higher than the untreated one. It has been indicated that the accomplishment of additional water retained in the catchment is worth of Rs.191.74/yr/ha which would be equalling to the cost of treatment of ravines in a period of about 10 years.
