

1166. Mittal, S.P. and Sud, A.D. 1985. Remedy for droughts in Shiwalik foothill village.
Krishi Agradoot, 29:57-59.

The paper presents the achievements made in the ORP, Bunga in Haryana state which is stated to give an answer to the drought problems in the Shiwalik region. It is suggested that more than 40% rain water going waste from these hills can be collected in small earthen dams and recycled for providing limited irrigation at critical growth stages of wheat. This would not only solve the problem of recurring droughts in the region but would also be helpful in moderating floods, ground water augmentation and improvement in ecosystem.
