

# Evaluation of Bt Cotton Hybrids

## North Zone - 2008-09

Report Submitted to

**Indian Council of Agricultural Research  
New Delhi, February 2009**

Submitted by  
Project Coordinator (Cotton Improvement)  
All India Coordinated Cotton Improvement Project  
Central Institute for Cotton Research,  
Regional Station, Coimbatore - 641003

## **NORTH ZONE**

### **EVALUATION OF BT COTTON HYBRIDS**

The technical programme for evaluation of the Bt cotton hybrids through ICAR trials during 2008-09 was formulated under the Chairmanship of the Assistant Director General (Commercial Crops), Indian Council of Agricultural Research, New Delhi for the four events which have been approved for commercial cultivation by GEAC (Ministry of Environment and Forests, Govt. of India). The programme was discussed at the All India Coordinated Cotton Improvement Project (AICCIP) Annual Group Meeting held at Punjab Agricultural University, Ludhiana on April 10<sup>th</sup> 2008. Accordingly, 39 Bt cotton hybrids belonging to private sector R & D firms as mentioned below were evaluated along with Bt cotton hybrid checks (RCH 134 BG I and BG II), Non Bt check hybrid (CSHH 198) and local check variety (LH 2076 for Punjab and H 1226 for Haryana state).

S. No.	Name of the Company	Name of the hybrid	S. No.	Name of the Company	Name of the hybrid
1	Ajeet Seeds	ACH 155-2 BG II	23	Pravardhan	PRCH 333 BG II
2	Ajeet Seeds	ACH 177-2 BG II	24	Pravardhan	PRCH 302 BG II
3	Amar Biotech	ABCH 7399 BG II	25	Rasi Seeds	RCH 605 BG II
4	Amar Biotech	ABCH 1299 BG II	26	Rasi Seeds	RCH 314 BG II

21	Nath Seeds	NCEH 145 (Fusion)	43	Non Bt Check	CSHH 198 (C)
22	Navkar	ACH 1005 Bt (Fusion)			

**Trial Locations:**

The trial was conducted at five locations. They are

1. Punjab Agricultural University, Ludhiana, Punjab
2. Punjab Agricultural University, Faridkot, Punjab
3. Punjab Agricultural University, Bathinda, Punjab
4. Choudhary Charan Singh Haryana Agricultural University, Hisar, Haryana
5. Central Institute for Cotton Research, Regional Station, Sirsa, Haryana

**Trial Details**

Number of Entries: 39+4 checks

Number of Rows: Yield trial 1: 6 Rows (Protected)  
Screening Trial: 3 Rows (Unprotected)

Row length: 6 m

Spacing: 67.5 x 75 cm (Punjab)  
100 x 60 cm (Haryana)

No. of replications: Three

Design: Randomized Block Design

Fertilizers: As per Recommendations.

## TRIALS

### I. EVALUATION UNDER ETL BASED PLANT PROTECTION

Weekly observations were recorded from 45 DAS against major sucking Pests and Bollworms. The insecticide sprays were based on the threshold levels of sap sucking pests and Bollworms. The sprayings were undertaken in all the replications of an entry, even if in one of the replications, the threshold level of infestation has exceeded.

### II. PATHOLOGICAL EVALUATION OF Bt COTTON HYBRIDS

All the entries in the trial were screened against Cotton Leaf Curl Virus (CLCuV) disease (CLCuD) and other fungal diseases.

## **Observations Recorded**

The Biometrical observations recorded were final plant stand, ginning per cent, lint index, seed index, Seed Cotton Yield (kg/ha) and lint yield (kg/ha). The entomological observations on sap sucking pests, Bollworm damage and natural enemies were recorded under ETL based plant protection trial. The pathological observations on incidence of cotton CLCuV and other foliar diseases were recorded.

### **I. EVALUATION UNDER ETL BASED PLANT PROTECTION**

#### **A. BIOMETRICAL EVALUATION.**

Biometrical observations were recorded in the ETL based Plant Protection Trial and are reported here.

##### **Germination and final Plant Stand**

Germination and correspondingly, the final plant stand was satisfactory in all the entries (Table 1). However, the plant stand in respect of KCH 707 BG II, and RCH 569 BG II was found less at Ludhiana, Sirsa and Srigananagar.

##### **Boll Weight**

Mean boll weight ranged from 3.1 g (Local check variety) to 4.8 g (PRCH 333 BG II, Jai BG II and VICH 305 BG II) (Table 2).

##### **Ginning Out turn (%)**

Ginning Outturn varied from 30.8 per cent (VICH 303 BG II) to 36.9 per cent (SBCH 308 (Fusion)). The non-Bt check hybrid CSHH 198 recorded a ginning out turn of 31.9 per cent (Table 3).

##### **Lint Index and Seed Index**

Noticeable variation was observed among the entries for lint and seed index. Lint index varied from 3.9 to 5.8 g (Table 4) and the seed index ranged from 8.0 to 11.4 g (Table 5).

## Seed Cotton Yield

Seed cotton yield data recorded in five different centres are furnished in Table 6. Among the check hybrids, RCH 134 Bt recorded the highest yield of 2803 kg/ha. Of the 39 test hybrids evaluated, seven hybrids recorded higher seed cotton yield over the best Bt check hybrid ranging from 2 – 16 per cent yield increase. The highest mean seed cotton yield of 3249 kg/ha was recorded in BCHH 6488 BG II with 16 and 28 per cent yield increase over RCH 134 BG I and BG II, respectively. The hybrid also registered an yield increase of 69 per cent over CSHH 198 (non-Bt check hybrid) and 82 per cent yield increase over local check variety. The other Bt hybrids which were found superior to the best Bt check hybrids are RCH 605 BG II, PRCH 333 BG II, 14 K 59 BG II, Ankur 3028 BG II, KDCHH 516 BG II and Jai BG II.

## Lint yield

The lint yield also followed more or less the same trend as that of seed cotton yield. RCH 134 Bt with a mean lint yield of 1012 kg/ha was the best check hybrid (Table 7). For lint yield also, the test hybrid BCHH 6488 BG II was the best recording 1194 kg/ha with 18 % increase over RCH 134 BG I and 32 % increase over RCH 134 BG II. However, only two other hybrids were found superior to the best Bt check hybrid viz., KDCHH 516 BG II and SP 7017 B2.

## B. FIBRE QUALITY EVALUATION

The mean fibre quality parameters recorded in the hybrids over the locations is furnished in Table 8. The 2.5% Span length varied from 25.4 mm (local check variety) to 32.3 mm (Jai BG II). The Micronaire value ranged from 4.1 to 5.1 and bundle strength varied from 20.1 (Krishna BG II) to 23.2 g/tex (15 K 39 BG II and SBCH 311 (Fusion).

## C. ENTOMOLOGICAL EVALUATION

### EVALUATION UNDER ETL BASED PLANT PROTECTION

#### SUCKING PESTS

##### Jassids

Jassid population was recorded in Faridkot, Ludhiana and Sirsa and was found to be comparatively high in Ludhiana (Table 9). Mean jassid population in the hybrids varied from 2.7 to 5.3.

##### White fly

Whitefly population was more at Ludhiana and Sirsa as compared to Faridkot (Table 10). The local check varieties had the highest mean number of white fly (6.5) and the least number of white flies per plant was recorded in the hybrids SDS 27 BG II and PRCH 302 BG II (4.0).

##### Thrips

Very high population of Thrips was observed at Sirsa as compared to Faridkot and Ludhiana (Table 11). The lowest mean thrips population of 1.1 per plant was recorded in SBCH 308 (Fusion) and the highest number of thrips (3.1) was recorded in local check varieties.

##### Aphids

No aphids infestation was found in Faridkot and Ludhiana.

##### Mealy bug / 10 cm terminal shoot

Data on mealy bug infestation was recorded in Faridkot and in Sirsa (Table 12). Most of the entries have recorded similar susceptibility to mealy bugs.

##### Predators

The mean number of predators was more in Bt hybrids (2.7 to 3.9) as compared to conventional check varieties which recorded a mean number of 0.2 (Table 13).

## Square Damage

Square damage was negligible in all the entries including the non-Bt checks at Hisar, Faridkot, Ludhiana and Sirsa (Table 14).

## Spotted Bollworm (*Earias spp.*)

Spotted bollworm was almost nil in all the Bt entries at both Faridkot and Ludhiana (Table 15) and ranged from 0.3 to 0.9 per 5 plants in the Non Bt hybrid and varieties.

## Pink Bollworm Larvae

Pink boll worm incidence was not observed at both Faridkot and Ludhiana on most of the Bt entries (Table 16); whereas, 0.4 and 0.8 larvae per 20 green bolls was recorded in non Bt check hybrid and in non Bt check varieties, respectively.

## Open boll and locule damage

Open boll and Locule damage was observed at harvest in Faridkot, Ludhiana and Sirsa. Open boll damage was low at Faridkot, Ludhiana and was high at Sirsa (Table 17). In general, less damage was noticed on non Bt check hybrids, and in non Bt checks higher damage of 4.6 (in CSHH 198) and 5.1 (local check varieties) was recorded. Similarly, locule damage was low at both the centres in Punjab (Table 17). The mean per cent locule damage was higher in non Bt checks (3.4 % in check varieties and 1.9 % in CSHH 198) as compared to Bt cotton hybrids.

## Plant protection measures

There was not much variation between Bt hybrids and non Bt checks in terms of requirements for number of sprays for sucking pests but there was notable difference observed for spray against bollworms. While the Bt entries did not cross ETL warranting pesticide spray, the non Bt checks crossed ETL for bollworms at least four times and needed pesticide spray.

## II. PLANT PATHOLOGY TRIAL

The trial was conducted at two locations in Haryana (Hisar and Sirsa - Screening nursery& Screen house) and at three locations in Punjab (Faridkot, Ludhiana and Bhatinda) as per the protocol. Observations on the incidence of bacterial blight, fungal foliar diseases, cotton leaf curl virus, parawilt etc. were recorded at fortnightly interval. **As decided in the meeting held on 11<sup>th</sup> April, 2008 at PAU, Ludhiana to review the screening system of cotton leaf curl virus disease, only one reaction i.e., the highest reaction of an entry at any location is reported.** The incidence of cotton leaf curl virus disease in general was very low in the zone and the Hisar centre has reported nil incidence of disease. The incidence of bacterial blight and fungal foliar disease was more due to more rain fall during the season. The results of screening are presented in Tables 18 and 19.

In case of bacterial blight no entry showed resistant reaction, whereas there were 29 and 13 entries in MR and MS category. Similarly in case of fungal foliar spots 13 entries were observed in MR category and there were 29 entries in MS. Eleven, twenty one, four and six entries were grouped in Resistant (R), Moderately resistant (MR), Moderately Susceptible (MS) and Susceptible (S) categories, respectively to cotton leaf curl virus disease. Parawilt incidence was recorded at Sirsa centre and it ranged from 0.0 to 52.39%. Similarly grey mildew incidence was recorded for the first time on Bt hybrids in north zone late in the season in October at Sirsa centre which may not have any impact on yield at the moment. However the percent incidence ranged from 3.80 to 34.57% (Table 19).

## OVERALL ASSESSMENT

Thirty nine Bt cotton hybrids were evaluated during 2008-09 in North Zone through AICCIP of ICAR with RCH 134 Bt and RCH 134 BG II as the Bt check hybrids, CSHH 198 as the non Bt check hybrid and non Bt local check variety (LH 2076 for Punjab and H 1226 for Haryana state). They were evaluated at five locations under ETL based protected conditions.

Seven out of 39 Bt test hybrids were found superior to the best check hybrid RCH 134 Bt with an yield increase of 2 – 16 per cent. The highest mean seed cotton yield of 3249 kg/ha was recorded in BCHH 6488 BG II with 16 and 28 per cent yield increase over RCH 134 BG I and BG II, respectively. The other superior Bt hybrids are RCH 605 BG II, PRCH 333 BG II, 14 K 59 BG II, Ankur 3028 BG II, KDCHH 516 BG II and Jai BG II. For lint yield also, the test hybrid BCHH 6488 BG II was the best recording 1194 kg/ha with 18 % increase over RCH 134 BG I and 32 % increase over RCH 134 BG II. However, only two other hybrids were found superior to the best Bt check hybrid *viz.*, KDCHH 516 BG II and SP 7017 B2.

There is a good amount of variability in respect of fibre quality in Bt test hybrids for fibre length and strength. Most of the hybrids tested were on par with fibre quality of check hybrids.

Jassids, whitefly thrips and mealy bugs were the major sucking pests noticed during the season. All the entries including the check hybrids and varieties were affected in varying degrees warranting chemical intervention. The overall boll infestation was low during the year. Square damage, spotted bollworms and pink bollworm incidence was low on Bt cotton hybrids as compared to the non Bt check hybrids and varieties. However, open boll damage was considerable at Sirsa location.

### SUMMARY TABLE
